***It is often remarked that politicians' private lives are becoming a feature of political communication in many advanced industrial democracies. However, there have so far been no genuinely comparative studies examining the personalized nature of political communication. Intimate Politics provides for the first time a systematic comparative analysis of such developments in Australia, France, Germany, Italy, Spain, the UK and the US. Drawing on a wide range of primary and secondary sources, it assesses the extent to which the private lives of politicians have become a feature of political communication in each democracy. The book provides a comprehensive account of the shifting boundaries between the public and private, and whether any developments are universal or more advanced in some democracies than others, and seeks to explain why this might be. Intimate Politics will be of great value for students and scholars of communication and media studies and political science and is required reading for anyone who wants a fuller understanding of the transformation of mediated politics in advanced industrial democracies.***

***The Genocide Convention explores the question of whether the law and genocide law in particular can prevent mass atrocities. The volume explains how genocide came to be accepted as a legal norm and analyzes the intent required for this categorization. The work also discusses individual suits against states for genocide and, finally, explores the utility of genocide as a legal concept.***

A perennial bestseller by eminent mathematician G. Polya, How to Solve It will show anyone in any field how to think straight. In lucid and appealing prose, Polya reveals how the mathematical method of demonstrating a proof or finding an unknown can be of help in attacking any problem that can be "reasoned" out—from building a bridge to winning a game of anagrams. Generations of readers have relished Polya's deft—indeed, brilliant—instructions on stripping away irrelevancies and going straight to the heart of the problem.

The Adventures of Sherlock Holmes By Arthur Conan Doyle The Adventures of Sherlock Holmes is a collection of twelve short stories by Arthur Conan Doyle, first published on 14 October 1892. It contains the earliest short stories featuring the consulting detective Sherlock Holmes, which had been published in twelve monthly issues of The Strand Magazine from July 1891 to June 1892. The stories are collected in the same sequence, which is not supported by any fictional chronology. The only characters common to all twelve are Holmes and Dr. Watson and all are related in the first-person narrative from Watson's point of view. The Adventures of Sherlock Holmes By Arthur Conan Doyle In general, the stories in The Adventures of Sherlock Holmes identify and try to correct social injustices. Holmes is portrayed as offering a new, fairer sense of justice. The stories were well received, and boosted the subscriptions figures of The Strand Magazine, prompting Doyle to be able to demand more money for his next set of stories. The first story, "A Scandal in Bohemia", includes the character of Irene Adler, who, despite being featured only within this one story by Doyle, is a prominent character in modern Sherlock Holmes adaptations, generally as a love interest for Holmes. Doyle included four of the twelve stories from this collection in his twelve favorite Sherlock Holmes stories, picking "The Adventure of the Speckled Band" as his overall favorite. Contemporary consumer society is increasingly saturated by digital technology, and the devices that deliver this are increasingly transforming consumption patterns. Social media, smartphones, mobile apps and digital retailing merge with traditional consumption spheres, supported by digital devices which further encourage consumers to communicate and influence other consumers to consume. Through a wide range of empirical studies which analyse the impact of digital devices, this volume explores the digitization of consumption and shows how consumer culture and consumption practices are fundamentally intertwined and mediated by digital devices. Exploring the development of new consumer cultures, leading international scholars from sociology, marketing and ethnology examine the effects on practices of consumption and marketing, through topics including big data, digital traces, streaming services, wearables, and social media's impact on ethical consumption. Digitalizing Consumption makes an important contribution to practice-based approaches to consumption, particularly the use of market devices in consumers' everyday consumer life, and will be of interest to scholars of marketing, cultural studies, consumer research, organization and management.

OECD Guiding Principles for Regulatory Quality and Performance

Over the past decade, Internet technology, now merging into that of mobile technology, has transformed the multiple facets of life in society across the world, changing work and leisure patterns, and placing greater demands on us as active, democratic citizens. The Internet literacy handbook, intended for parents, teachers and young people throughout Europe, is a guide to exploiting to the fullest this complex network of information and communication. The handbook is comprised of 21 fact sheets, each covering a particular topic on Internet use, from searching for information to setting up blogs through to e-shopping and e-citizenship. These fact sheets offer teachers and parents sufficient technical know-how to allow them to share young people's and children's voyages through communication technology. They highlight ethical and safety considerations, give insight into added value in education, provide ideas for constructive activities in class or at home, share best practice in Internet use, and provide a wealth of definitions and links to sites that give practical examples and further in-depth information.

Pour renforcer son autonomie : une exploitation pas à pas des documents du manuel ; la possibilité d'annoter les textes pour mieux se les approprier. Pour travailler grammaire et lexique : des rubriques d'observation de la langue pour chaque leçon ; de nombreux exercices d'entraînement lexical et grammatical ; une page Prononciation par unité. Pour apprendre à s'auto-évaluer : des grilles d'auto-évaluation à compléter pour chaque mini challenge ; des activités de préparation à l'évaluation pour toutes les activités langagières.

Fundamentals of Radiochemistry presents a comprehensive overview of the principles, objectives, and methods of radiochemistry and how they are applied in various fields of chemistry. Topics covered include characteristics of radioactivity and radioactive matter, the chemistry of ephemeral radionuclides, actinides of high atomic number, positronium, and physicochemical behavior of systems containing one or more compounds at tracer or sub-tracer concentration. Numerous appendices are included to provide additional detail to information presented in chapters. Because Fundamentals of Radiochemistry is the first book to discuss what chemical information can be obtained with sub-tracer amounts, it is essential reading for inorganic chemists, radiochemists, analytical chemists, nuclear

chemists and others interested in the topic.

This book brings together an international collection of original papers looking at the impacts of the recent liberalization measures in the transport sector. It contains a number of area studies which focus on the deregulation of countries such as Switzerland and Australia as well as the broader European perspective. Additionally there are a number of modal studies which pay attention to the deregulation which has taken place regarding road, rail and air transport in selected countries. The papers are written by international authorities in their respective fields.

*During the mid-1990s, the O.J. Simpson murder trial dominated the media in the United States and were circulated throughout the world via global communications networks. The case became a spectacle of race, gender, class and violence, bringing in elements of domestic melodrama, crime drama and legal drama. According to this fascinating new book, the Simpson case was just one example of what the author calls 'media spectacle' - a form of media culture that puts contemporary dreams, nightmares, fantasies and values on display. Through the analysis of several such media spectacles - including Elvis, The X Files, Michael Jordan, and the Bill Clinton sex scandals - Doug Kellner draws out important insights into media, journalism, the public sphere and politics in an era of new technologies. In this excellent follow up to his best selling Media Culture, Kellner's fascinating new volume delivers an informative read for students of sociology, culture and media.*

*Inner speech lies at the chaotic intersection of several difficult questions in contemporary philosophy and psychology. On the one hand, these episodes are private mental events. On the other, they resemble speech acts of the sort used in interpersonal communication. Inner speech episodes seem to constitute or express sophisticated trains of conceptual thought but, at the same time, they are motoric in nature and draw on sensorimotor mechanisms for speech production and perception more generally. By using inner speech, we seem to both regulate our bodily actions and gain a unique kind of access to our own beliefs and desires. Inner Speech: New Voices explores this familiar and yet mysterious element of our daily lives, bringing together contributions from leading philosophers, psychologists, and neuroscientists. In response to renewed interest in the general connections between thought, language, and consciousness, these leading thinkers develop a number of important new theories, raise questions about the nature of inner speech and its cognitive functions, and debate the current controversies surrounding the 'little voice in the head.'*

*Passenger Rail Franchising*

**It is thirteen years since the Railways Act 1993 started the process of privatising British Rail, replacing it with one company owning and managing the infrastructure, an open-access system for freight services and a series of twenty-five passenger franchises let to private companies for a specified period of time. This period has seen almost continuous change, and there is now a new 'triumvirate' framework with the Department for Transport, the Office of Rail Regulation and Network Rail in place, with the third generation of franchises in the process of being let and the number being reduced to nineteen. The Committee's report examines the current franchising system, focusing on the coherence of its objectives, the effectiveness of the process for awarding franchises and the management of franchise agreements, and whether more competition and vertical integration is needed. Findings include that the current system represents a policy muddle which lacks a coherent framework for the development of good services and delivery of value for money for passengers and taxpayers. The only way the Government can increase capacity and improve services for the long-term is to drop the dogmatic pursuit of competition in its decision-making as to what the private and public sectors can and should do in future. The Government's forthcoming long-term strategy for the railways will need to address these issues, and to set out a structure and a strategy capable of securing quality passenger rail services to meet demand over the next half a century.**

Sir Arthur Ignatius Conan Doyle, DL (1859-1930) was a Scottish physician and writer, most noted for his stories about the detective Sherlock Holmes, which are generally considered a major innovation in the field of crime fiction, and for the adventures of Professor Challenger. He was a prolific writer whose other works include science fiction stories, historical novels, plays and romances, poetry, and non-fiction.

This paper, prepared by the OECD and the Development Research Center under the State Council of the People's Republic of China (DRC), discusses principles for reforming the Chinese railway, based on experience of rail reform in OECD countries.

*In a small town on the edge of the Caspian Sea, Edmond Lazarian and his best friend Tahereh pass their days playing together, drifting between the delights of beachcombing and the joys of the sherbet shop. Although Edmond is Armenian and Tahereh is the Muslim daughter of the school's janitor, they remain blissfully unaware of the disquiet that ripples the surface calm of their close-knit community. Yet years later, when Edmond's daughter chooses a Muslim to marry, tensions inevitably build. Unable to keep sidestepping the prejudices around him, Edmond is finally forced to make a choice, and one that will haunt him for years to come. For fans of Anne Tyler, The Space Between Us is a poignant, wistful story about belonging and otherness, pride and prejudice, and the pressures and family expectations that inform our decisions. Brilliantly painting the landscape of intricate social conventions and private emotional conflict, Pirzad has produced an intimate portrait of ordinary Iranians living everyday lives.*

*During the past decade there has been an explosion in computation and information technology. With it have come vast amounts of data in a variety of fields such as medicine, biology, finance, and marketing. The challenge of understanding these data has led to the development of new tools in the field of statistics, and spawned new areas such as data mining, machine learning, and bioinformatics. Many of these tools have common underpinnings but are often expressed with different terminology. This book describes the important ideas in these areas in a common conceptual framework. While the approach is statistical, the emphasis is on concepts rather than mathematics. Many examples are given, with a liberal use of color graphics. It should be a valuable resource for statisticians and anyone interested in data mining in science or industry. The book's coverage is broad, from supervised learning (prediction) to unsupervised learning. The many topics include neural networks, support vector machines, classification trees and boosting---the first comprehensive treatment of this topic in any book. This major new edition features many topics not covered in the original, including graphical models, random forests, ensemble methods, least angle regression & path algorithms for the lasso, non-negative matrix factorization, and spectral clustering. There is also a chapter on methods for "wide" data (p bigger than n), including multiple testing and false discovery rates. Trevor Hastie, Robert Tibshirani, and Jerome Friedman are professors of statistics at Stanford University. They are prominent researchers in this area: Hastie and Tibshirani developed generalized additive models and wrote a popular book of that title. Hastie co-developed much of the statistical modeling software and environment in R/S-PLUS and invented principal curves and surfaces. Tibshirani proposed the lasso and is co-author of the very successful An Introduction to the Bootstrap. Friedman is the co-inventor of many data-mining tools including CART, MARS, projection pursuit and gradient boosting.*

*Nearly every country that produces cars views the automobile industry as strategically important because of its direct economic significance and because it serves as a bellwether for innovation in employment conditions. In this book, industrial relations experts from eleven countries consider the state of the industry worldwide. They are particularly interested in assessing whether the loudly heralded model of lean production initiated by Toyota has become pervasive. The contributors focus on employment practices: the way work is organized, how workers and managers interact, the way worker representatives respond to lean production strategies, and the nature of the adaptation and innovation process itself.*

This book constitutes the thoroughly refereed post-workshop proceedings of the 8th International Workshop on Automated Deduction in Geometry, ADG 2010, held in Munich, Germany in July 2010. The 13 revised full papers presented were carefully selected during two rounds of reviewing and improvement from the lectures given at the workshop. Topics addressed by the papers are incidence geometry using some kind of combinatoric argument; computer algebra; software implementation; as well as logic and proof assistants.

Claire Martin's autobiography was first published in two volumes in 1965 and 1966. Already a prize winning Quebec writer, the author generated a wave of controversy with this detailed account of a childhood subjected to cruelty and brutality. Her deeply moving portrayal drew acclaim from readers who saw aspects of their own childhood experiences mirrored in its pages; it also evoked resistance from traditionalists unsettled by its exposé of family, church, and convent school some decades before the Quiet Revolution. Written with the passion of one who has known harsh injustices, this memoir nevertheless reflects the steady focus and narrative skill of an seasoned writer. With a richly descriptive style and deft ironic touch, Claire Martin tells her own unforgettable story of a young person confronting and finally emerging from the oppressions of unrestrained malign authority.

The arrival of the participatory web 2.0 has been hailed by many as a media revolution, bringing with it new tools and possibilities for direct political action. Through specialised online platforms, mainstream social media or blogs, citizens in many countries are increasingly seeking to have their voices heard online, whether it is to lobby, to support or to complain about their elected representatives. Politicians, too, are adopting "new media" in specific ways, though they are often criticised for failing to seize the full potential of online tools to enter into dialogue with their electorates. Bringing together perspectives from around the world, this volume examines emerging forms of citizen participation in the face of the evolving logics of political communication, and provides a unique and original focus on the gap which exists between political uses of digital media by the politicians and by the people they represent.

A crucial question throughout the Middle Ages, the relationship between body and spirit cannot be understood without an interdisciplinary approach - combining literature, philosophy and medicine. Gathering contributions by leading international scholars from these disciplines, the collected volume explores themes such as lovesickness, the five senses, the role of memory and passions, in order to shed new light on the complex nature of the medieval Self.
