

## 3e Ga C Ographie Les Etats Unis

*The publications of the Hakluyt Society (founded in 1846) made available edited (and sometimes translated) early accounts of exploration. This volume contains an anonymous journal of Vasco da Gama's expedition to India, the first to sail directly to India from Europe.*

*This title was first published in 2000: An original and thought-provoking analysis of modern initiatives in the tropical rain forest. While issues such as logging, eco-timber, eco-tourism have been widely analyzed from an outsider's perspective, this book considers them from the local people's viewpoint, in terms of a long history of the rainforest uses. The authors demonstrate that the relationship of indigenous people to the tropical forest is not essentially timeless, nor is it primarily spiritual or mystical. It is in fact firmly connected to modern realities, while still being rooted in historical beliefs and practices. Standing at the intersection of anthropology, historical geography and rainforest ecology, and also at the interface of the local and the global, this ethnographically grounded study dispels a number of commonly held assumptions. It reveals how processes of 'impact' are actually two-way interactions, as local communities in Melanesia incorporate industries like logging into rapidly evolving post-colonial society and economy.*

*This multi-authored book provides an updated description of climate variability in the Mediterranean basin, focusing on decadal and centennial time scales and on the results available on the impact of future emission scenarios at regional scale. The authors describes both local physical processes responsible for these variability - such as changes in the*

*surface properties and land use- and global processes - such as changes in the large scale atmospheric circulation associated to global warming, NAO, tropical monsoon and ENSO. Regional climate change issues are also addressed. Mediterranean Climate Variability aims to review the research on this region and to provide at the same time both an introduction and a reference for researchers. It covers topics typical of Climatology, Climate history, Meteorology, Oceanography, Environmental Science but the information here provided would also be useful for research in agriculture, social and economic studies. It is addressed to scientists and students interested in the Mediterranean climate and environment. Some topics have interesting connections to nearby regions: Northern Atlantic, West Africa, central and Eastern Europe. Each chapter will contain a summary meant to provide information to policy makers, researchers from other fields, and in general to a wide audience without a technical expertise on climate. \* Provides an updated analysis of the Mediterranean climate features and guidelines for future research \* Considers both oceanographic and atmospheric aspects \* Analyzes the Mediterranean climate in a global perspective*

**This volume contains papers presented in part at a symposium held in May 2012 at Göttingen University, to honour Professor Joachim Reitner for his numerous contributions to the fields of geobiology, geology, and palaeontology. Our present volume reflects the breadth of Reitner's interests and accomplishment with tributes and research or review papers by his students, former students, collaborators, and friends. The symposium was held in conjunction with Joachim Reitner's 60th birthday. This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use. All rights not granted by the work's license are retained by the author or authors.**

**This volume opens on 4 March 1802, the first anniversary of Thomas Jefferson's inauguration as the nation's third president, and closes on 30 June. In March, a delegation of Seneca Indians comes to Washington to discuss their tribe's concerns, and Jefferson names a commissioner to handle a land sale by Oneida Indians to the state of New York. In April, the Senate ratifies a treaty with the Choctaw nation for a wagon road across their lands. Jefferson worries about an increasingly dictatorial France taking back control of New Orleans, prompting him to the intemperate remark that he would "marry" America's fortunes to the British fleet. Charles Willson Peale sends him sketches of the skull of a prehistoric bison found in Kentucky. During the closing, and very frustrating, weeks of Congress, he distracts**

**himself with a cipher devised by Robert Patterson. He prepares lists of books to be purchased for the recently established Library of Congress and also obtains many titles for his own collection. Even while he is in Washington occupied with matters of state, Jefferson has been keeping close watch on the renovations at Monticello. In May, he has Antonio Giannini plant several varieties of grapes in the southwest vineyard, and he orders groceries, molasses, dry Lisbon wine, and cider to be shipped to Monticello in time for his arrival. He looks forward "with impatience" to the moment he can embrace his family once more.**

**In The Codex, published in 1954, C.H. Roberts studied the process by which in the early centuries of our era the roll as the vehicle for literature was replaced by the codex, which has remained the format of the book ever since. New evidence that has accumulated in the last thirty years has set some of the problems in a new light and in this book, published here for the first time in paperback, the authors re-examine these and offer a different explanation for the remarkable part in the transformation played by the early Church.**

*Dick Popkin and James Force have attended a number of recent conferences where it was apparent that much new and important research was being done in the fields of interpreting Newton's and Spinoza's contributions as biblical scholars and of the relationship between their biblical scholarship and other aspects of their particular philosophies. This collection represents the best current research in this area. It stands alone as the only work to bring together the best current work on these topics. Its primary audience is specialised scholars of the thought of Newton and Spinoza as well as historians of the philosophical ideas of the late seventeenth and early eighteenth centuries.*

**Evolution of Primary Producers in the Sea** reference examines how photosynthesis evolved on Earth and how phytoplankton evolved through time – ultimately to permit the evolution of complex life, including human beings. The first of its kind, this book provides thorough coverage of key topics, with contributions by leading experts in biophysics, evolutionary biology, micropaleontology, marine ecology, and biogeochemistry. This exciting new book is of interest not only to students and researchers in marine science, but also to evolutionary biologists and ecologists interested in understanding the origins and diversification of life. **Evolution of Primary Producers in the Sea** offers these students and researchers an understanding of the molecular evolution, phylogeny, fossil record, and environmental processes that collectively permits us to comprehend the rise of phytoplankton and their impact on Earth's ecology and biogeochemistry. It is certain to become the

first and best word on this exhilarating topic. Discusses the evolution of phytoplankton in the world's oceans as the first living organisms and the first and basic producers in the earth's food chain. Includes the latest developments in the evolution and ecology of marine phytoplankton specifically with additional information on marine ecosystems and biogeochemical cycles. The only book to consider of the evolution of phytoplankton and its role in molecular evolution, biogeochemistry, paleontology, and oceanographic aspects. Written at a level suitable for related reading use in courses on the Evolution of the Biosphere, Ecological and Biological oceanography and marine biology, and Biodiversity.

The loss to national economies resulting from excessive plant biomass has been appreciable and has put pressure on water managers to develop weed control procedures. The results from the most up-to-date research activities and field trials of leading aquatic plant scientists and managers in all five continents, aimed at resolving these weed problems, has been drawn together in this volume.

*This book presents a wide range of contributions addressing diverse aspects of biodiversity exploitation and conservation. These collectively provide a snapshot of ongoing action and state-of-the-art research, rather than a series of necessarily more superficial overviews. Examples presented here derive from studies in 17 countries including Africa, Asia, Europe, and North and South America. These reports will stimulate future work toward attaining a sustainable balance between the conservation and exploitation of biodiversity.*

*Preface Adhesion is a phenomenon architects and civil engineers are not very familiar with. In other disciplines knowledge about surface properties and the background of bonding energies is also far from satisfactory; nevertheless there are many important applications in concrete engineering, where adhesion is necessary for success and durability. These include: - coating*

*and painting - repair of concrete surfaces - bonding of fresh to old concrete - crack injection - glueing of precast elements - glueing of steel to concrete, etc. In 1981 RILEM established the technical committee 52-RAC 'Resin Adherence to Concrete'. The main aims of the committee's work were - to collect research results and practical experiences - to initiate and coordinate research programs - to develop, on a scientific base, test methods for field and for laboratory purposes. One of the results of the committee's work is a state-of-the-art report, which will be presented orally as a General Report at the International Symposium ISAP '86, and will be printed either in the RILEM journal Materials and Structures or separately. Several test recommendations have been elaborated and will be prepared as drafts for the participants of ISAP '86. These are: - direct tensile test - pull-off test - direct shear test - slant shear test - four-point bending test - dynamic loading test - thermal compatibility test (two versions) - injectibility test.*

*This volume investigates how urban growth and prosperity transformed the cities of the Roman Mediterranean in the last centuries BCE and the first centuries CE, integrating debates about Roman urban space with discourse on Roman urban history. The contributions explore how these cities developed landscapes full of civic memory and ritual, saw commercial priorities transforming the urban environment, and began to expand significantly beyond their wall circuits. These interrelated developments not only changed how cities looked and could be experienced, but they also affected the functioning of the urban community and together contributed to keeping increasingly complex urban communities socially cohesive. By focusing*

*on the transformation of urban landscapes in the Late Republican and Imperial periods, the volume adds a new, explicitly historical angle to current debates about urban space in Roman studies. Confronting archaeological and historical approaches, the volume presents developments in Italy, Africa, Greece, and Asia Minor, thus significantly broadening the geographical scope of the discussion and offering novel theoretical perspectives alongside well-documented, thematic case studies. Urban Space and Urban History in the Roman World will be of interest to anyone working on Roman urbanism or Roman history in the Late Republic and early Empire.*

“ Like man, woman is a human being. ” When *The Second Sex* was first published in Paris in 1949—groundbreaking, risqué, brilliantly written and strikingly modern—it provoked both outrage and inspiration. *The Independent Woman* contains three key chapters of Beauvoir's masterwork, which illuminate the feminine condition and identify practical social reforms for gender equality. It captures the essence of the spirited

manifesto that switched on light bulbs in the heads of a generation of women and continues to exert profound influence on feminists today.

Fjords are deep, glacially carved estuaries that are peculiar to certain coastlines, and have several characteristics that distinguish them from shallow embayments. At higher latitudes they indent the western coastlines of Scandinavia, North and South America, and New Zealand. They are also a common feature of much of the arctic coastline. The papers contained in this volume were presented at a workshop funded by the NATO Advanced Studies Institute in Victoria, British Columbia. It may seem curious to the reader that this special class of estuaries should have attracted an international gathering of oceanographers from several different disciplines. The reason for this interest stems from both practical and scientific considerations. On the one hand, fjords are a feature common to the coastlines of several countries that depend heavily on the oceans for communication, fisheries and other resources. The impact of man's activities on these coasts has created a demand for new knowledge of the physical, biological and chemical aspects of fjords. Sometimes man's influence on the ocean is intentional as, for example, in the artificial control of ice cover; often it is the more insidious build-up of toxic wastes that is of concern. These problems are particularly acute where the conflicting demands of fisheries, industrial development and recreation meet in a single fjord; and indeed, this is a common occurrence along several of the

fjords in Scandinavia and Canada.

les Houches This Winter School on "The Physics and Fabrication of Microstructures" originated with a European industrial decision to investigate in some detail the potential of custom-designed microstructures for new devices. Beginning in 1985, GEC and THOMSON started a collaboration on these subjects, supported by an ESPRIT grant from the Commission of the European Community. To the outside observer of the whole field, it appears clear that the world effort is very largely based in the United States and Japan. It also appears that cooperation and dissemination of results are very well organised outside Europe and act as a major influence on the development of new concepts and devices. In Japan, a main research programme of the Research and Development for Basic Technology for Future Industries is focused on "Future Electron Devices". In Japan and in the United States, many workshops are organised annually in order to bring together the major specialists in industry and academia, allowing fast dissemination of advances and contacts for setting up cooperative efforts.

This book constitutes the refereed proceedings of the 13th International Symposium on Music Technology with Swing, CMMR 2017, held in Matosinhos, Portugal, in September 2017. The 44 full papers presented were selected from 64 submissions. The papers are grouped in eight sections: music information retrieval, automatic recognition, estimation and classification, electronic dance music and rhythm, computational musicology, sound in practice: auditory guidance and feedback in the context of motor learning and motor adaptation, human perception in multimodal context, cooperative music networks and musical HCIs, virtual and augmented reality, research and creation: spaces and modalities.

Exploring the notion of early medieval , this book re-examines and presents an alternative history of south India. It covers problems and history of Tamilakam in general and early medieval Karnataka and Kerala in particular.

The Second World War is omnipresent in contemporary memory debates. As the war fades from living memory, this study is the first to systematically analyze how Second World War museums allow prototypical visitors to comprehend and experience the past. It analyzes twelve

permanent exhibitions in Europe and North America - including the Bundeswehr Military History Museum in Dresden, the Museum of the Second World War in Gdańsk, the House of European History in Brussels, the Imperial War Museums in London and Manchester, and the National WWII Museum in New Orleans - in order to show how museums reflect and shape cultural memory, as well as their cognitive, ethical, emotional, and aesthetic potential and effects. This includes a discussion of representations of events such as the Holocaust and air warfare. In relation to narrative, memory, and experience, the study develops the concept of experientiality (on a sliding scale between mimetic and structural forms), which provides a new textual-spatial method for reading exhibitions and understanding the experiences of historical individuals and collectives. It is supplemented by concepts like transnational memory, empathy, and encouraging critical thinking through difficult knowledge.
