The Practice of Perioperative Transesophageal Echocardiography provides over 100 teaching cases ranging from the most common to the most challenging. Each case is succinctly presented in an easy-to-read question-answer, self-test format comprised of three printed pages of text and echo images.

Echocardiography technique, interpretation, and case management are emphasized by internationally recognized experts in the field. The cases cover the gamut of clinical problems,

as well as challenges related to image optimization and artifacts. The versatility of TEE is represented by 2-D, 3-D, color flow and spectral Doppler, tissue Doppler imaging, and quantitative assessments of volumes, pressures, and the severity of valvular pathologies. A companion website contains the fully searchable text plus echocardiographic video clips for each case.

Reinforce your knowledge of radiographic positioning and anatomy, and produce quality radiographs! Corresponding to the chapters in Bontrager and Lampignano's Textbook of Radiographic Positioning and Related Anatomy, 8th Edition, this practical workbook offers a wide variety of exercises including situation-based questions, film critique questions, laboratory activities, and self-evaluation tests. A wide variety of exercises include questions on anatomy, positioning critique, and image evaluation, with answers at the end of the workbook. Chapter competencies are formatted as a set of tasks that you should be able to perform after working through the material. Situational questions describe clinical scenarios, then ask you to apply your knowledge to real-life examples. Film critique questions prepare you to evaluate the quality of radiographs and ask what positioning corrections need to be made to improve the image. Laboratory exercises provide hands-on experience as you perform radiographs using phantoms, evaluate the images, and practice positioning. Self-tests at the ends of chapters
