This short text is designed to present those aspects of the behavioral sciences that are clinically relevant to physicians in all branches of medicine. It should also be helpful to medical students studying for the behavioral sciences section of Part 1 of the national boards, to physicians taking the behavioral sciences portion of the FLEX exam, and to psychiatrists preparing for their American Board of Psychiatry certifying exam. Behavior is a product of brain function and is manifested by actions in response to stimuli. It is fundamental to the maintenance of health, and plays a role in causing and intensifying many illnesses. Abnormal behaviors can reveal to us, and even allow us to localize, brain dysfunction and disease. And they can cause, for patients, their families, and friends, considerable suffering. On an intellectual level, trying to comprehend the behavior of our patients (and our own behavior as well), contributes to making medicine a truly intriguing profession.

This text examines the use of collaboration technologies in the problem-solving or decision-making process. These systems are widely used in both education and in the workplace to enable virtual groups to discuss and exchange ideas on issues ranging from applied problems to theoretical debate. While some systems are text-based, the majority rely on visualization techniques to allow participants to represent their ideas in a more flexible, graphical form. The text evaluates existing systems, and looks at how the specific needs of users in both educational and corporate environments can be reflected in the design of new systems.
