

Apex College And Career Preparation Answers

Defining Hybrid Homeschools in America: Little Platoons explores the idea of hybrid homeschools, where students attend a formal school setting for part of the week and are homeschooled the rest of the week. Eric Wearne observes that school choice in America typically comes in two forms: programs set up for disadvantaged students, and the more common form of choice that wealthy parents can exercise—paying private tuition or moving to a more desirable school district. While disadvantaged families in many places and wealthy families everywhere can exercise choice when it comes to schooling, a sizeable group typically gets left out of those options—the large number of families who are too wealthy to access state or local programs, but not wealthy enough to pay for private schooling or moving expenses. Wearne argues that this is a long-term weakness for school choice in America; the middle class is generally a well-off demographic, but is almost completely unserved when it comes to this large aspect of their children’s lives. However, one low-cost option has arisen to address this niche: hybrid home schools. Wearne cites existing research to argue for this model’s efficacy for the middle class as a strong example of a healthy civil society and examines how policy definitions are breaking down and evolving in education as we challenge the existing definitions of schooling.

Research, teaching, service, and public outreach—all are aspects of being a tenured professor. But this list of responsibilities is missing a central component: actual scholarly learning—disciplinary knowledge that faculty teach, explore in research, and share with the academic community. How do professors pursue such learning when they must give their attention as well to administrative and other obligations?

Professing to Learn explores university professors’ scholarly growth and learning in the years immediately following the award of tenure, a crucial period that has a lasting impact on the academic career. Some launch from this point to multiple accomplishments and accolades, while others falter, their academic pursuits stalled. What contributes to these different outcomes? Drawing on interviews with seventy-eight professors in diverse disciplines and fields at five major American research universities, Anna Neumann describes how tenured faculty shape and disseminate their own disciplinary knowledge while attending committee meetings, grading exams, holding office hours, administering programs and departments, and negotiating with colleagues. By exploring the intellectual activities pursued by these faculty and their ongoing efforts to develop and define their academic interests, *Professing to Learn* directs the attention of higher education professionals and policy makers to the core aim of higher education: the creation of academic knowledge through research, teaching, and service.

This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

This accessible guide offers school leaders a wealth of strategies to foster a culture where educators engage with young people to encourage college readiness and career success. Based in research and best practices, *Mentoring is a Verb* explains how to build effective mentoring programs as well as encourage educators to individually mentor students. Olwell breaks down the key elements it takes to forge lasting relationships with students and addresses

ways to connect to at-risk students. Packed with actionable steps. This book gives you the tools to help your students set high expectations and goals, recognize and address barriers to success, plan for the future, and reach their post-graduation aspirations.

More than half of 9th graders in the United States will never complete a college degree. High schools must do more than prepare some students for college: They must prepare all American youth for productive lives as well as continued learning beyond high school. In this timely volume, two educational leaders advocate for a more meaningful high school experience. To accomplish this, the authors argue that we need to change the focus of our current high

school reform efforts from "college for all" to "careers for all." This work shows how schools can prepare young people both for the emerging workplace and postsecondary education.

Earth science, which in this context does not include oceanic, atmospheric, and space sciences, is vital to the wellbeing of the United States and many of its issues, such as water resources, are expected to grow in importance. An earth science workforce will be needed to deal with this issues and it's important that this workforce draw on the talents of all citizens. Thus, federal education programs can be implemented to help attract and retain students on an earth science pathway; however, light funding means agencies need to invest in programs that actually work. As a result, the U.S. Geological Survey (USGS) Office of Science Quality and Integrity asked the National Research Council (NRC) to establish a committee to carry out a study, organized around a workshop, to address several tasks including: examining recent earth science education programs with a research or training component, both formal and informal, in these federal agencies; identifying criteria and the results of previous federal program evaluations, and summarizing the knowledge and skills identified in recent NRC workforce reports that are needed by earth scientists in their careers. Preparing the Next Generation of Earth Scientists: An Examination of Federal Education and Training Programs presents the committee's finding. The investigation was completed through information provided by federal agency managers and published articles and reports. A 2-day workshop was also held to examine federal earth science education programs and efforts to leverage resources. The report includes the workshop agenda, a glossary of abbreviated terms, and more.
