The first comprehensive examination of California's mid-century modern design, generously illustrated. In 1951, designer Greta Magnusson Grossman observed that California design was " not a superimposed style, but an answer to present conditions.... It has developed out of our own preferences for living in a modern way. " California design influenced the material culture of the entire country, in everything from architecture to fashion. This generously illustrated book, which accompanies a major exhibition at the Los Angeles County Museum of Art, is the first comprehensive examination of California's mid-century modern design. It begins by tracing the origins of a distinctively California modernism in the 1930s by such European émigrés as Richard Neutra, Rudolph Schindler, and Kem Weber; it finds other specific design influences and innovations in solid-color commercial ceramics, inspirations from Mexico and Asia, new schools for design training, new concepts about leisure, and the conversion of wartime technologies to peacetime use (exemplified by Charles and Ray Eames's plywood and fiberglass furniture). The heart of California Design is the modern California home, famously characterized by open plans conducive to outdoor living. The layouts of modernist homes by Pierre Koenig, Craig Ellwood, and Raphael Soriano, for example, were intended to blur the distinction between indoors and out. Homes were furnished with products from Heath Ceramics, Van Keppel-Green, and Architectural Pottery as well as other, previously unheralded companies and designers. Many objects were designed to be multifunctional: pool and patio furniture that was equally suitable indoors, lighting that was both task and ambient, bookshelves that served as room dividers, and bathing suits that would turn into ensembles appropriate for indoor entertainment. California Design includes 350 images, most in color, of furniture, ceramics, metalwork, architecture, graphic and industrial design, film, textiles, and fashion, and ten incisive essays that trace the rise of the California design aesthetic.

Unions face a once in a generation opportunity for renewal. Decades of decline have been compounded by a global elite who increasingly generate profit from financial engineering in ways that side-step labour and undermine the power of organised workers. However, as this economic system begins to falter, there are signs of a renewed union movement emerging. Debt-laden firms ⌘ from supermarkets and nursery chains to outsourcing giants ⌘ are collapsing, and workers are organising to determine what comes next.

Unionsed bank cashiers are refusing to push predatory loans, teachers are striking against the exploitative housing market, and manufacturing workers are pooling redundancy pay to buy-out plants and become worker owners. Alice Martin and Annie Quick argue that these are seeds of union renewal. To be effective in an age of finance, the union movement must set its ambitions beyond narrow wage-bargaining, and towards the financial systems that have infiltrated workplaces and impoverished communities. By doing so, they can play a critical role in ushering in a new, democratic economy. No-one committed to economic justice can afford to miss this urgent, highly original book and its radical vision for unions.

While historians have explored the impact on workers of changes in American business, the broader impact on other cultural forms, and vice versa, has not been widely studied. This anthology contributes to the debate at the intersection of business history and the study of cultural forms, ranging from material to visual culture to literature.

This text presents a theoretically-based critique of management knowledge in an accessible form which is relevant to MBA students and practitioners alike. Students have to learn and digest accepted management knowledge and practitioners look to gurus as a source of management knowledge without any appreciation of how secure these ideas may be. This book should therefore be relevant to both students and practitioners in questioning how far management research actually leads to genuine knowledge of organizations.

Visualizing Beauty examines the intersections between feminine ideals and changing socio-political circumstances in China, Japan, and Korea during the first half of the twentieth century. Eight essays present a broad range of visual products that informed concepts of beauty and womanhood, including fashion, interior design magazines, newspaper illustrations, and paintings of and by women. Studying "Traditional Woman" and "New Woman" as historical categories, this anthology contemplates the complex relations between feminine subjectivity and the

promotion of modernity, commerce, and colonialism.

Since the early twentieth century, politically engaged and socially committed U.S. health professionals have worked in solidarity with progressive movements around the world. Often with roots in social medicine, political activism, and international socialism, these doctors, nurses, and other health workers became comrades who joined forces with people struggling for social justice, equity, and the right to health.

Anne-Emanuelle Birn and Theodore M. Brown bring together a group of professionals and activists whose lives have been dedicated to health internationalism. By presenting a combination of historical accounts and first-hand reflections, this collection of essays aims to draw attention to the longstanding international activities of the American health left and the lessons they brought home. The involvement of these

progressive U.S. health professionals is presented against the background of foreign and domestic policy, social movements, and global politics.

Hardly a day goes by without news of the extinction or endangerment of yet another animal species, followed by urgent but largely unheeded calls for action. An eloquent denunciation of the failures of Canada's government and society to protect wildlife from human exploitation, Max Foran's The Subjugation of Canadian Wildlife argues that a root cause of wildlife depletions and habitat loss is the culturally ingrained

beliefs that underpin management practices and policies. Tracing the evolution of the highly contestable assumptions that define the human-wildlife relationship, Foran stresses the price wild animals pay for human self-interest. Using several examples of government oversight at the federal, provincial, and territorial levels, from the Species at Risk Act to the Biodiversity Strategy, Protected Areas Network, and

provincial management plans, this volume shows that wildlife policies are as much – or more – about human needs, priorities, and profit as they are about preservation. Challenging established concepts including ecological integrity, adaptive management, sport hunting as conservation, and the flawed belief that wildlife is a renewable resource, the author compels us to recognize animals as sentient individuals and as

integral components of complex ecological systems. A passionate critique of contemporary wildlife policy, The Subjugation of Canadian Wildlife calls for belief-change as the best hope for an ecologically healthy, wildlife-rich Canada.

In Ranching, Mining, and the Human Impact of Natural Resource Development, Raymond L. Gold observes and reports on people whose lives have been significantly affected by the industrialization of rural communities in the American West. Such community change research is rarely done, so this classic study is invaluable for its real world groundings applicable to a variety of social science theories. The study evolved out of ethnographic research on Western communities done over a full decade. This was the first work of its kind to examine and account for the rise of local citizens' groups on the sense of being a community. Its account of this process covers both ordinarily slow and extraordinarily rapid areas of change in the American West. In this regard it is a contribution to basic social theory, showing clearly the interrelation between small-community and large-society elements of the structure and functioning of community life. No other book brings together the story of social effects of natural resource development projects in the American West. This book shows how to implement a social policy concerning resource development and public agencies. It is intended for people interested in the environment, American society, rural and urban affairs, social impact assessment, and urban structures generally. It is also aimed at industrial and community planners and natural resource development firms.
