Recent developments in linguistic theory, as well as the growing body of evidence from languages other than English, provide new opportunities for deeper explorations into how language is represented in the mind of learners. This collection of new empirical studies on the acquisition of Spanish morphosyntax by leading researchers in the field of language acquisition, specifically contributes to the characterization of the L1 / L2 connection in acquisition. Using L1 and L2 Spanish data from children and adults, the authors seek to address the central questions that have occupied developmental psycholinguists in the final decades of the previous century and that will no doubt continue engaging them into the present one.

Language for specific purposes (LSP) refers to language courses specific to a content area, such as Business Spanish or French for Engineering. Although around for some time, it has gained increasing interest in the last ten years because of the demand for language programs to provide a "practical skill" and, in many cases, from students wishing to build marketability with their language skills. At most language conferences, LSP sessions are on the agenda in some form. There's also crossover in this area with languages in the community programs (service learning/social justice/heritage learners/etc.). Little research has been done on the topic. Rising from a new biennial conference, this edited volume provides a seminal set of studies that opens dialogue for further development of LSP curriculum—a hot topic. The areas of focus include what research is needed going forward, current curriculum development and where it is going, and what it means to bring language skills into the workplace. Both K12 and higher ed are addressed. The editor has pulled together strong essays to address some key topics in LSP into a volume that will really contribute to the field. TOC includes a who's who in the field. Extra research data as PDFs will be made available on the GUP website for those interested.

This is the first book on the acquisition of Spanish that provides a state-of-the-art comprehensive overview of Spanish morphosyntactic development in monolingual and bilingual situations. Its content is organized around key grammatical themes that form the empirical base of research in generative grammar: nominal and verbal inflectional morphology, subject and object pronouns, complex structures involving movement (topicalizations, questions, relative clauses), and aspects of verb meaning that have consequences for syntax. The book argues that Universal Grammar constrains all instances of language acquisition and that there is a fundamental continuity between monolingual, bilingual, child and adult early grammatical systems. While stressing their similarities with respect to linguistic representations and processes, the book also considers important differences between these three acquisition situations with respect to the outcome of acquisition. It is also shown that many linguistic properties of Spanish are acquired earlier than in English and other languages. This book is a must read for those interested in the acquisition of Spanish from different theoretical perspectives as well as those working on the acquisition of other languages in different contexts.
