Die Rolle der Massenmedien im politischen Prozess demokratischer Staaten ist seit einigen Jahren einem grundlegenden Wandel unterworfen. Presse, Hörfunk und Fernsehen wurden lange Zeit als weitgehend passive Vermittlungsinstanzen wahr genommen, die den Publizitätsinteressen demokratischer Politik in einer primär „dienenden“ Funktion gegenüber treten. Seit den 1990er Jahren werden die Massenmedien auch in den

europäischen Demokratien als zunehmend „eigenmächtige“ Akteure und folgenreich institutionalisierter Handlungskontext demokratischer Politikherstellung erkennbar. Manche Autoren sprechen von der Entwicklung regelrechter „Mediendemokratien“. Dieser PVS-Sonderband bietet eine umfassende Bestandsaufnahme der Problemdiagnosen, Zustandsbeschreibungen und Wirkungsanalysen rund um die Mediendemokratie. Intelligence services, government administrations, businesses, and a growing majority of the population are hooked on the idea that big data can reveal patterns and correlations in everyday life. Initiated by software engineers and carried out through algorithms, the mining of big data has sparked a silent revolution. But algorithmic analysis and data mining are not simply byproducts of media development or the logical consequences of computation. They are the radicalization of the Enlightenment's quest for knowledge and progress. Data Love

argues that the "cold civil war" of big data is taking place not among citizens or between the citizen and government but within each of us. Roberto Simanowski elaborates on the changes data love has brought to the human condition while exploring the entanglements of those who—out of stinginess, convenience, ignorance, narcissism, or passion—contribute to the amassing of ever more data about their lives, leading to the statistical evaluation and individual profiling of their selves. Writing from a philosophical standpoint, Simanowski illustrates the social implications of technological development and

Climate justice requires sharing the burdens and benefits of climate change and its resolution equitably and fairly. It brings together justice between generatio

and justice within generations. In particular it requires that attempts to address justice between generations through various interventions designed to curb greenhouse emissions today do not end up creating injustice in our time by hurting the currently poor and vulnerable. The United Nations Sustainable Development Goals (SDGs) summit in September 2015, and the Conference of Parties (COP) to the Framework Convention on Climate Change in Paris in December 2015, brought climate change and its development impact centre stage in global discussions. In the run up to Paris, Mary Robinson, former President of Ireland

and UN Secretary General's Special Envoy for Climate Change, instituted the Climate Justice Dialogue "to mobilize political will and creative thinking to shape an ambitious and just international climate agreement in 2015". The editors of this volume, an economist and a philosopher, served on the High Level Advisory Committee of the Climate Justice Dialogue. They noted the overlap and mutual enforcement between the economic and philosophical discourses on climate justice. But they also noted the great need for these strands to come together to support the public and political discourse. Climate Justice: Integrating Economics and

Philosophy is the result. Bringing together contributions from economists and philosophers, Climate Justice illustrates the different approaches, how they overlap and interact, and what they have already learned from each other and might still have to learn.

As the use of human body parts has become increasingly commercialized, a need has arisen for new approaches to regulation that moves beyond the paradigm of altruism. During the course of this discussion, the notion of property has become a key concept. Focusing on practical and conceptual perspectives, the multidisciplinary group of authors, which includes

specialists in philosophy, law, sociology, biology and medicine, have come together with practicing lawyers consider both legal provisions and patterns of regulation in countries across Europe. Identifying divergences between different legal traditions, the authors explore various conceptual models which could be used to improve and to guide policy making. With this twin focus on practical and conceptual perspectives, this volume sets the standard for a detailed and innovative discussion of issues surrounding the regulation of research on human tissue.

Anthropocene has become an environmental buzzword. It denotes a new geological epoch that is human?dominated. As mounting scientific evidence reveals, humankind has fundamentally altered atmospheric, geological, hydrological, biospheric, and other Earth system processes to an extent that the risk of an irreversible system change emerges. Human societies must therefore change direction and navigate away from critical tipping points in the various ecosystems of our planet. This

hypothesis has kicked off a debate not only on the geoscientific definition of the Anthropocene era, but increasingly also in the social sciences. However, the specific contribution of the social sciences disciplines and in particular that of political science still needs to be fully established. This edited volume analyzes, from a political science perspective, the wider social dynamics underlying the ecological and geological changes, as well as their implications for governance and politics in the

Anthropocene. The focus is on two questions: (1) What is the contribution of political science to the Anthropocene debate, e.g. in terms of identified problems, answers, and solutions? (2) What are the conceptual and practical implications of the Anthropocene debate for the discipline of political science? Overall, this book contributes to the Anthropocene debate by providing novel theoretical and conceptual accounts of the Anthropocene, engaging with contemporary politics and policy-making in the

Anthropocene, and offering a critical reflection on the Anthropocene debate as such. The volume will be of great interest to students and scholars of political science, global environmental politics and governance, and sustainable development. In 1989 and 1990 the map of Europe was redrawn without a war, unlike other great ruptures of the international order such as 1815, 1870, 1918, and 1945. How did this happen? This major multinational

study, based on archives from both sides of the 'Iron Curtain', highlights the contribution of international statecraft to the peaceful dissolution of Europe's bipolar order by examining pivotal summit meetings from 1970 to 1990. These are organized into three periods: 'Thawing', 'Living with', and 'Transcending' the Cold War. The volume offers fascinating insights into key statesmen such as Richard Nixon and Ronald Reagan, Leonid Brezhnev and Mikhail Gorbachev, Willy Brandt and Helmut Kohl, Zhou Enlai and Deng Xiaoping. It explores the central issues of the superpowers and arms control, their

triangular relationship with China, and the seemingly intractable German question. Particular attention is devoted to the cultural dimensions of summitry, as performative acts for the media and as encounters with 'the Other' across ideological divides. All these threads are drawn together in a sweeping analytical conclusion. Written in lively prose, *Transcending the Cold War* is essential reading for anyone interested not just in modern history but also current international affairs.

'Wars do not break out, they are not brokered or declared as is always written. They are brought about by those who desire them.' In June 1914, Europe was enjoying unprecedented peace and prosperity. Little over a month later, the world was at war - and only a handful of people knew it was happening. Inspired by the medieval mystery plays *Sommer 14 - A Dance of Death* is an epic telling from a German and European perspective of the world's descent into war. *Employing the character*

regarding its use, or its importance for livelihoods, identity, or place-making. Building on insights from science and technology studies, feminist, and postcolonial approaches, we engage broadly with the ways that water-related decision making is often depoliticized and evacuated of political content or meaning—and to what effect. Key themes that emerged from the contributions include the politics of water infrastructure and insecurity; participatory politics and multi-scalar
