available advances from the perspective of an otolaryngologist. This book has been designed to fill the knowledge gap that exists amongst otolaryngologists on this topic. Being surgeons otolaryngologists pay very little attention to this topic. Current advances in the field of electronics have not only improved the quality of hearing aids but also made them very small. Miniaturization in electronics has played a vital role in shrinking the size of these hearing aids. With the advancements that are taking place in battery technology the future hearing aids will not only remain small but also would be more powerful.

Better will also be of value to many of those who previously had a complete ear and hearing evaluation. In the era of HMOs and managed care, physicians rarely have time to discuss all of the problems associated with hearing loss. Hearing Better can fill in some of the gaps.

Additionally, new advances in the treatment of hearing loss are constantly taking place. Some of the procedures and treatments discussed in this book were not available just a few years ago. Hearing Better provides an overview of these and other procedures currently available to correct or compensate for a hearing loss. Hearing aid technology changes at a rapid pace. For speech-language pathologists who work with individuals using hearing instruments, keeping up with the new technology can be challenging, and sometimes even intimidating. Hearing Aids for Speech-Language Pathologists is designed to remove the mystery and the confusing high-tech terms of the many hearing aid algorithms and features, by simply laying out the need-to-know aspects in an organized, easy to read and understand manner. The core of this text focuses on how modern hearing aids work, and the tests associated with the fitting of these instruments. Attention is

given to both the school age and adult hearing aid user. Recent developments such as situation detection, rechargeability and wireless connectivity are reviewed in detail, as well as the popular use of smartphone apps to allow the user to control the processing. Amplification is not just hearing aids, and therefore chapters also have been dedicated to implantable amplification strategies, FM and Bluetooth solutions. Hearing aid fitting cannot be studied in isolation, but rather, how it fits into the complete treatment of the patient with hearing loss, including the audiologic rehabilitative process. For this reason, the beginning chapters of the book are devoted to a review

of the basics of the modern audiologic evaluation and the associated auditory pathologies. Readers will also find portions of the book that address hearing screening in the schools, rehabilitative techniques and auditory training. Practicing speech-language pathologists and graduate students will find that this text provides the latest in concise and practical information in the areas of hearing aids and rehabilitative audiology. Hearing Aids for Speech-Language Pathologists is authored by two of the industry's leading authorities on adult amplification, who have carefully crafted a text that provides speech-language pathologists with the essential information to work comfortably

of daily living. A hearing aid is an example of an assistive listening device that attempts to minimise the consequences of hearing loss. It is a restorative mechanism that amplifies sound to compensate for hearing loss. For the greater part of the population with hearing loss it is the most cost-effective solution.

Therefore, the hearing aid must be correctly fitted and used. It is vital that the client knows how the instrument operates, how to handle it, how to care for it, and, most importantly, how to use it.

Fifty seven adult hearing aid users were interviewed with a structured interview schedule. Quantitative results were analysed using statistics and qualitative data was categorised into main themes and ideas. Results showed that there was a general consensus about the self-image and wearing of hearing aids, as most participants were embarrassed to wear their devices. This could be due to inadequate and lack of counselling and public awareness. Furthermore, it was found that most

government fitted hearing aids and accessories were poorly cared for and maintained. There were several factors which negatively influenced the utilisation and maintenance of hearing aids. One of these factors was finance i.e. the cost of travelling to and from hospitals, the cost of batteries as well as the cost of repairs to hearing aids played a significant role in how the hearing aid was utilised and cared for. Distance from hospitals also impacted on the maintenance as all hearing

Furthermore, the issue of multilingualism presented an obstacle in terms of utilising hearing aids correctly and to their full benefit, as most participants were not instructed on hearing aid care and use in their first language. The results from this study were utilised in the development of service delivery guidelines for the dispensation of government hearing aids.

This area has emerged as one of critical importance, as signified by a single specialized meeting (the International Hearing Aid Conference, IHCON) that brings together specialists from the disparate disciplines involved, including both university and industry researchers. Identification of the key steps that enable high-impact basic science to ultimately result in significant clinical advances that improve patient outcome is critical. This volume will provide an overview of current key issues in hearing aid research from the perspective of many different

It will offer insight into the experience, current technology and future technology that can help improve hearing aids, as scientists and clinicians typically have little or no formal training over the whole range of the individual disciplines that are relevant. The selection and coverage of topics insures that it will have lasting impact, well beyond immediate, short-term, or parochial concerns. ?

or acute, mild or severe, present since birth or acquired in older age - can have significant effects on one's communication abilities, quality of life, social participation, and health. Despite this, many people with hearing loss do not seek or receive hearing health care. The reasons are numerous, complex, and often interconnected. For some, hearing health care is not affordable. For others, the appropriate services are difficult to access, or individuals do not know how or where to access them. Others may not want to deal with the stigma that they and society may associate with needing hearing
