A new look at a new world of wine from a new generation of writers Do you like to enjoy fine wine but want some down to earth recommendations and honest information? Written by over 30 new voices in the world of wine, *The Wine Opus* offers fresh modern insight into the world of wine. Accessible and up-to-date this covers 4,000 of the world's most significant wineries - from the reliable established producers to the rising stars. Discover all the important wine-producing regions of the world, including maps to locate key producers and a checklist on the regions' recent vintages. If you want to drink good wine, *The Wine Opus* gives you the names you need to know.

The effort to go beyond given knowledge in different domains – artistic, scientific, political, metaphysical – is a characteristic driving force in modernism and the avant-gardes. Since the late 19th century, artists and writers have frequently investigated the medium and its limits, pursued political and religious aims, and explored hitherto unknown physical, social and conceptual spaces, often in ways that combine these forms of critical inquiry into one and provoke further theoretical and methodological innovations. The fifth volume of the EAM series casts light on the history and actuality of investigations, quests and explorations, the European avant-garde and modernism from the late 19th century to the present day. The authors seek to answer questions such as: How have modernism and the avant-garde appropriated scientific knowledge, religious dogmas and social conventions, pursuing their investigation beyond the limits of given knowledge and conceptions? How have modernism and avant-garde created new conceptual models or representations where other discourses have allegedly failed? In what ways do practises of investigation, quest or exploration shape artistic work or the formal and thematic structures of artworks?

Memory of War in France examines France in the era of world war through the unconventional eyes of the veteran, activist and novelist, César Fauxbras. It encompasses the French navy at war, the naval mutinies of 1919, the experience of unemployment, interwar pacifism, French defeat in 1940 and Paris under the heel of German occupation.

Winner of the André Simon Drinks Book of the Year Award. Winner of the IACP award in Wine, Beer & Spirits A stunning box set, complete with seven vintage maps in a pull-out drawer. Based on six years of on-the-ground research and unprecedented access to actual Champagne growers, Champagne is the first book to actually describe producers and wines based on their terroir - enlightening readers by showing them exactly where, how, and by whom these great wines are made. Champagne is one of the most iconic, sought-after wines in the world, beloved by serious wine collectors as well as everyday wine drinkers.

However, it is also one of the most misunderstood wines out there - obscured by a multimillion-pound marketing industry that makes it difficult for consumers to honestly judge value and understand

what they're drinking. Included in the stunning box set are the Louis Larmat vinicultural maps - the only detailed wine maps of the region, which were commissioned by the French government in the mid-1940s and have never appeared in print in English.

**This volume appears now finally in English, sixty years after the death of its author,**

Lucien Tesnière. It has been translated from the French original into German, Spanish, Italian, and Russian, and now at long last into English as well. The volume contains a comprehensive approach to the syntax of natural languages, an approach that is foundational for an entire stream in the modern study of syntax and grammar. This stream is known today as dependency grammar (DG). Drawing examples from dozens of languages, many of which he was proficient in, Tesnière presents insightful analyses of numerous phenomena of syntax. Among the highlights are the concepts of valency and head-initial vs. head-final languages. These concepts are now taken for granted by most modern theories of syntax, even by phrase structure grammars, which represent, in a sense, the opposite sort of approach to syntax from what Tesnière was advocating. The research for this book commenced in 1988 while the author was serving in the Army. In the years since, numerous sources have been consulted, but career imperatives left insufficient time to complete the project until retirement from the military. In the past the author spent many days on the First and Second World War battlefields wondering precisely where the Victoria Cross actions took place. He resolved to find out.??The book is designed for the armchair reader as much as the battlefield visitor. A detailed

account of each VC action sets it in the wider strategic and tactical context. Detailed sketch maps show the area today, together with the battle-lines and movements of the combatants. It will allow visitors to stand upon the spot, or very close, where the VCs were won. Photographs of the battle sites illustrate the accounts. There is also a comprehensive biography for each VC recipient and photographs. The biographies cover every aspect of their lives 'warts and all' - parents and siblings, education, civilian employment, military career, wife and children, death and burial or commemoration. There is also a host of other information, much published for the first time. Some fascinating characters emerge, with numerous links to many famous people and events.??As featured on BBC Radio Wiltshire and in the Daily Record, Gloucestershire Echo, Canterbury Times and Barking & Dagenham Post. The Alps are an arched mountain chain stretching 1500 km between Vienna and Graz in Austria and Genova in Italy. They resulted from the collision of the African and Laurasian plates during Mesozoic and Tertiary times. The high standard of knowledge attained over

the last 30 years by the working groups on "Alpine Metamorphism" is well known and helped considerably to recognize pre-Mesozoic elements in the Alps. In Part I of this book the subdivision of the major Alpine units and pre-Mesozoic pal inspastic reconstructions are covered before discussion of the pre-Mesozoic geology in Parts II, III and IV It is understood that the Mesozoic and later events overprinted pre-existing structures veiling the earlier history and the nature of protoliths. Although the Alpine overprint does not facilitate the recognition of older structures, pre-Mesozoic basement units were recognized during the first beginnings of geological observations in the Alps, about 200 years ago. Fifty percent of the Alpine domain is underlain by basement units that have been unconformably covered since Permian and Mesozoic times. This basement appears today in a complex pattern among the Alpine structures. The history of their discovery and explanation, parallel with a growing sophistication of research methods, are the subject of the introductory chapter of Part II. The Rough Guide to Languedoc & Roussillon is the ultimate travel guide to this rich and rewarding region of France. Discover the highlights of both Languedoc and Roussillon
