Hormone Assay considers assay methods in detail, focusing on vertebrate hormones. Statistics as applied to biological assay is another field in which recent advances have been phenomenal, although the application of modern methods to the design and analysis of many assays awaits full development. This simultaneous progress in the two fields of work has nevertheless provided a fruitful series of examples of how assays can be conducted in order to gain the greatest amount of information from the material available, and to express results in precise form. The book opens with a chapter on the use of and need for statistics in assays, followed by a chapter on insulin, which exemplifies some of the methods described. Subsequent chapters discuss assay methods for parathyroid hormone, adrenalin, pituitary lobe hormones, melanophore expanding hormone from the pituitary, gonadotropins, adrenocorticotropin, thyrotropic hormone, and lactogenic hormone. Also covered are assay procedures for mammogenic hormone, mammogenic hormone, androgens, and estrogens.

Chemicals are everywhere. Many are natural and safe, others synthetic and dangerous. Or is it the other way around? Walking through the supermarket, you might ask yourself: Should I be eating organic food? Is that anti-wrinkle cream a gimmick? Is it worth buying BPA-free plastics? This new edition of Chemistry in the Marketplace provides fresh explanations, fascinating facts and funny anecdotes about the serious science in the products we buy and the resources we use. It might even save you some money. With chapters on the chemistry found in different parts of our home, in the backyard and in the world around us, Ben Selinger and Russell Barrow explain how things work, where marketing can be deceptive and what risks you should really be concerned about. Chemistry in the Marketplace is a valuable resource for university lecturers, high school teachers and students of chemistry and chemistry related subjects and disciplines, such as biochemistry, microbiology and science in society.

This book presents new approaches for skin aging and photocarcinogenesis and topical formulations based on nanocarrier systems for skin disorders. It discusses cosmeceuticals, laser, photodynamic therapy, and melatonin-based treatments as important strategies for photoaging management. Photodynamic therapy and melatonin can be used in the photocarcinogenesis context, too. Therefore, the inclusion of this strong antioxidant in sunscreen products could be a promising approach. The book discusses topical formulations, including emulsions (conventional formulations and emulsions stabilized by solid particles), nail films, and nanocarriers used for the delivery of actives in various skin and nail diseases such as acne, psoriasis, atopic dermatitis, fungal diseases, leishmaniasis, and skin cancer. Finally, several nanocarriers are introduced, such as lipid vesicles (ranging from the first-generation conventional liposomes to the more recent deformable vesicles), liquid crystalline nanodispersions, gelatin, and solid lipid nanoparticles. Their composition, formulation, characterization, and topical applications are also discussed. Although this is a broad topic, the most important (nano)pharmaceutical formulations are presented in the book.

Caper: The Genus Capparis presents a pharmacognostic and ethnopharmacological exploration of the genus Capparis, emphasizing its medicinal potential. There is a long history of safe usage of Capparis parts both in diet and as plant drugs throughout the world, and the details of this usage are summarized in 39 tables covering numerous Capparis species. This detailed survey of historical and traditional medical uses of capers provides a forum for the integration of ethnomedicine and modern pharmacology. This book tracks the use of the genus Capparis from the present position of caper fruit and its flowers as a niche culinary article of economic importance, to ancient times and its use in traditional medicine of the Mediterranean and the Middle East. Section I covers the various classes of compounds found in Capparis that hold potential for being physiologically and medically active, including alkaloids, flavonoids, vitamins, and proteins and amino acids. Section II examines therapeutic uses for Capparis species for medical conditions such as inflammation, rheumatism, diabetes mellitus, pain and fever, cancer, infections and infestations, hypertension, and more. The authors balance the role of this plant in mythological and religious thinking with advances in modern chemical and pharmacological research. Coverage of ethnomedical usage leads to practical discussions of how the unique evolution of the genus Capparis impacts present and future applications of the different species for medicine and therapeutic nutrition. Providing chemical and pharmacological reviews to an extent not previously undertaken, this book will serve as a firm basis for scientists interested in conducting research on this novel source of safe phytochemical agents.

This volume is dedicated to the late B.F. Skinner as a tribute to his pioneering work on the Experimental Analysis of Behavior. This science that he initiated studies the behavior of individual organisms under laboratory conditions. The volume describes a broad collection of representative and effective research techniques in the Experimental Analysis of Behavior; techniques derived solely from infrahuman subjects, which have been selected both for their utility in behavior analysis and for their potential value in expanding the use of behavior analysis in the neurosciences. By bringing together under one cover the expertise of individual authors regarding techniques based on their particular laboratory experiences, the book provides an informative and practical source of methods and techniques for those practising or interested in Experimental Analysis of Behaviour.

The Vitamin Co-Factors of Enzyme Systems provides a systematic account of the vitamin B complex, which play a fundamental role in a variety of biochemical reactions. This book reviews the vitamin B group in terms of their significance in enzymes reactions. Organized into 11 chapters, this book begins with an overview of the processes by which the main nutrients are broken down into simpler components. This text then explores the existence in foodstuffs of substances essential for the proper functioning of the animal organism. Other chapters consider the synthetic method of producing a commercially important chemical to be displaced by a method based on its isolation from natural sources. This book discusses as well the effect of various vitamin deficiencies in human beings. The final chapter deals with the series of changes that represents the biochemical reactions that occur during the contraction of muscles. This book is a valuable resource for biochemists and clinicians.

Over the last five centuries, the development of modern weapons and warfare has created an entirely new set of challenges for practitioners in the field of military medicine. Between Flesh and Steel traces the historical development of military medicine from the Middle Ages to modern times. Military historian Richard A. Gabriel focuses on three key elements: the modifications in warfare and weapons whose increased killing power radically changed the medical challenges that battle surgeons faced in dealing with casualties, advancements in medical techniques that increased the effectiveness of military medical care, and changes that finally brought about the establishment of military medical care systems in modern times. Other topics include the rise of the military surgeon, the invention of anesthesia, and the emergence of such critical disciplines as military psychiatry and bacteriology. The approach is chronological—century by century and war by war, including Iraq and Afghanistan—and cross-cultural in that it examines developments in all of the major armies of the West: British, French, Russian, German, and American. Between Flesh and Steel is the most comprehensive book on the market about the evolution of modern military medicine.
