This book should prove most helpful as a "how to" guide for a man working alone to build a strong, yet simple log cabin made to last. It can be a log cabin that a man can be proud to call his home or for a getaway home away from home on the weekend. I built the 13 by 41 foot cabin shell, including cutting down the trees and peeling off the bark, in three months while camping out in a tent. Cutting down the trees and peeling off the bark took more than half of the time in completing the shell of the cabin. It was hard work, but by using the trees on my property I saved money and it gave me a more satisfying feeling of accomplishment as I lived my dream. After about three months work the cabin was up and we moved from our tents into the cabin, however, the electrical wiring, well and plumbing, septic system, interior walls, chimney, and 8 by 28 foot add-on, which are covered in varying details (less on the wiring and plumbing) in this book, were worked on as I got the time and money. Overall, to complete the cabin, it took about four to five months time. The 757 square foot cabin was completed in about four months by working long hours, six days a week. The long camping experience was an ordeal for my wife, but my son and I enjoyed it. We thank God for His help and guidance through it all. The plans contained in this book are designed to allow a man working alone to build a cabin in a short time that will last a life time. I include an additional chapter about building a pergola type patio cover out of red cedar. 48 pictures are included in this book. Happy trails!

Originally published in 1971 *The Geometry of Environment* is a fusion of art and mathematics introducing stimulating ideas from modern geometry, using illustrations from architecture and design. The revolution in the teaching of mathematics and the advent of the computer in design challenge traditional ways of appreciating the space about us, and expand the 'structural' understanding of our surroundings through such concepts as transformations, symmetry groups, sets and graphs. This book aims to show the relevance of 'new maths' and encourages exploration of the widening intellectual horizons of environmental design and architecture.

**Building Systems Magazine (BSM) is an award winning United States-based trade magazine read by builders, developers and general contractors using or considering using innovative construction technologies. Once commonly known as "pre-fab," today's modern building systems employ innovative materials and techniques to create residential or commercial structures in a factory setting in a fraction of the time it takes to site build. BSM focuses mainly on log, timber frame, modular, panel, and structural insulated panel building technologies. Since factory fabrication and site preparation take place simultaneously, structures are finished and ready for occupancy in weeks, rather than months or years as required by conventional site-building schedules. Provides instructions for designing and planning a deck and deck furnishings, including tools, materials, and techniques.**

The way a man thinks about his day-to-day living and the needs of his household reveals a great deal about his ambitions, his idea of himself, and his role in the community. And his house or castle offers many clues to his habits as well as those of the members of his household. This intriguing book explores the evolution of country house plans throughout Britain and Ireland, from medieval times to the eighteenth century. With photographs and detailed architectural plans of each house under discussion, the book presents a whole range of new insights into how these homes were designed and what their varied designs tell us about the lives of their residents. Starting with fortified medieval tower houses, the book traces patterns that developed and sometimes repeated in country house design over the centuries. It discusses who slept in the bedchambers, where food was prepared, how rooms were arranged for official and private activities, what towers signified, and more. Groundbreaking in its depth, the volume offers a rare tour of country houses for scholar and general reader alike.
