Richard Drake has skillfully woven

together the various strands of the Appalachian experience into a sweeping whole. Touching upon folk traditions, health care, the environment, higher education, the role of blacks and women, and much more, Drake offers a compelling social history of a unique American region. The Appalachian region, extending from Alabama in the South up to the Allegheny highlands of Pennsylvania, has historically been characterized by its largely rural

populations, rich natural resources that have fueled industry in other parts of the country, and the strong and wild, undeveloped land. The rugged geography of the region allowed Native American societies, especially the Cherokee, to flourish. Early white settlers tended to favor a self-sufficient approach to farming, contrary to the land grabbing and plantation building going on elsewhere in the South. The growth of a market

economy and competition from other agricultural areas of the country sparked an economic decline of the region's rural population at least as early as 1830. The Civil War and the sometimes hostile legislation of Reconstruction made life even more difficult for rural Appalachians. Recent history of the region is marked by the corporate exploitation of resources. Regional oil, gas, and coal had attracted some industry even before

the Civil War, but the postwar years saw an immense expansion of American industry, nearly all of which relied heavily on Appalachian fossil fuels, particularly coal. What was initially a boon to the region eventually brought financial disaster to many mountain people as unsafe working conditions and strip mining ravaged the land and its inhabitants. A History of Appalachia also examines pockets of urbanization in Appalachia. Chemical, textile, and

other industries have encouraged the development of urban areas. At the same time, radio, television, and the internet provide residents direct links to cultures from all over the world. The author looks at the process of urbanization as it belies commonly held notions about the region's rural character.

"The actor will do, in public, what is considered impossible." When the renowned Polish director Jerzy Grotowski began his 1967 American workshop with these words, his students were stunned. But within four weeks they themselves had experienced the

"impossible." In *An Acrobat of the Heart*, teacher-director-playwright Stephen Wangh reveals how Jerzy Grotowski's physical exercises can open a pathway to the actor's inner creativity. Drawing on Grotowski's insights and on the work of Stanislavski, Uta Hagen, and others, Wangh bridges the gap between rigorous physical training and practical scene and character technique. Wangh's students give candid descriptions of

their struggles and breakthroughs, demonstrating how to transform these remarkable lessons into a personal journey of artistic growth. Courageous and compelling, *An Acrobat of the Heart* is an invaluable resource for actors, directors, and teachers alike.

“The evil that men do” has been chronicled for thousands of years on the European stage, and perhaps nowhere else is human fear of our own evil more detailed than in its personifications in theater. In Stages of Evil, Robert Lima explores the sociohistorical implications of Christian and pagan representations of evil and the theatrical creativity that occultism has engendered. By examining examples of alchemy, astronomy, demonology, exorcism, fairies, vampires, witchcraft, hauntings, and voodoo in prominent plays, Stages of Evil explores American and European perceptions of occultism from medieval times to the modern age.

A fascinating synthesis of ancient wisdom, modern medicine, scientific research, and personal experiences that proves that the human heart, not the brain, holds the secrets that link body, mind, and spirit. You know that the heart loves and feels, but did you know that the heart also thinks, remembers, communicates with other hearts, helps regulate immunity, and contains stored information that continually pulses through your body? In *The Heart's Code*, Dr. Paul Pearsall explains the theory and science behind energy cardiology, the emerging field that is uncovering one of the most significant medical, social, and spiritual discoveries of our time: The heart is more than just a pump; it

conducts the cellular symphony that is the very essence of our being. Full of amazing anecdotes and data, *The Heart's Code* presents the latest research on cellular memory and the power of the heart's energy and explores what these breakthroughs mean about how we should live our lives. By unlocking the heart's code we can discover new ways of understanding human healing and consciousness and create a new model for living that leads to better health, happiness, and self-knowledge.

This peer-reviewed academic yearbook stems from the inaugural meeting of the newly formed UNESCO UNITWIN network on Arts Education Research for Cultural Diversity and Sustainable Development, held at the National Institute of Education, Singapore in April 2017. It presents international scholarly perspectives on issues related to arts education and cultural diversity in terms of: i) national and international policies; ii) terms, concepts and vocabularies; iii) current and ongoing research; and

iv) best practices. The UNESCO UNITWIN is an arts education research think tank that gathers and leverages original research and critical commentaries on the arts and sustainable development from UNITWIN member states and beyond (Australia, Canada, Colombia, Germany, Hong Kong, Kenya, Korea, Israel, New Zealand, Singapore, Taiwan, the Netherlands and the United States of America).

The events that inspired the Screentime series for the Nine network.

Conflict is a major facet of many environmental

challenges of our time. However, growing conflict complexity makes it more difficult to identify win-win strategies for sustainable conflict resolution. Innovative methods are needed to help predict, understand, and resolve conflicts in cooperative ways. Agent-Based Modeling of Environmental Conflict and Cooperation examines computer modeling techniques as an important set of tools for assessing environmental and resource-based conflicts and, ultimately, for finding pathways to conflict resolution and cooperation. This book has two major goals. First, it argues that complexity

science can be a unifying framework for professions engaged in conflict studies and resolution, including anthropology, law, management, peace studies, urban planning, and geography. Second, this book presents an innovative framework for approaching conflicts as complex adaptive systems by using many forms of environmental analysis, including system dynamics modeling, agent-based modeling, evolutionary game theory, viability theory, and network analysis. Known as VIABLE (Values and Investments from Agent-Based interaction and Learning in Environmental systems), this framework

File Type PDF Caged Birds David Campton Script

allows users to model advanced facets of conflicts—including institution building, coalition formation, adaptive learning, and the potential for future conflict—and conflict resolution based on the long-term viability of the actors' strategies. Written for scholars, students, practitioners, and policy makers alike, this book offers readers an extensive introduction to environmental conflict research and resolution techniques. As the result of decades of research, the text presents a strong argument for conflict modeling and reviews the most popular and advanced techniques, including system dynamics

modeling, agent-based modeling, and participatory modeling methods. This indispensable guide uses NetLogo, a widely used and free modeling software package, to implement the VIABLE modeling approach in three case study applications around the world. Readers are invited to explore, adapt, modify, and expand these models to conflicts they hope to better understand and resolve.

The Heart's Code

A wry, affecting tale set in a small town on the Indonesian coast, Man Tiger tells the story of two interlinked and tormented families and of Margio, a young man ordinary in all particulars except that he conceals within himself a supernatural female white tiger. The inequities and betrayals of family life coalesce around and torment this magical being. An explosive act of violence follows, and its mysterious cause is unraveled as events progress toward a heartbreaking revelation. Lyrical and bawdy, experimental

and political, this extraordinary novel announces the arrival of a powerful new voice on the global literary stage.

Julia Gibbon, a junior minister, is thrown into turmoil by the conflict between private and public morality. Her affair with Penelope Wright, a frank and forthright journalist, very much a thorn-in-the-side of the Establishment, forces Julia to confront insecurities and doubts she never knew she had.

This is a compassionate play about love and politics in our hypocritical age. 3 women, 1 man, 3 women or men
