Financial statements facilitate the communication between corporations and various stakeholders. The integrity, stability and transparency of such communication help preserving Hong Kong as a top global financial centre. To many laypersons, looking through financial statements can be like reading novels in a foreign language, with a sea of jargon obscuring the statements' true meaning. Financial Analysis in Hong Kong 2nd Edition is a product of experience, feedback and chapter review as well as an update of the changes in practices, guidelines, standards and legislations since its 1st edition in 2008. This 2nd edition provides a clear, concise reference for analysing corporations' financial statements. Based on the evaluations of published financials, this book is a convenient standalone guide for both novices and financial professionals in the boardroom and beyond.

LWR capital costs have escalated continuously over the years to the point where today its economics represent a bar to further LWR deployment in the US. High initial costs and the promise of a similar pattern of cost escalation in succeeding years for the LMFBR would effectively stop LMFBR deployment in this country before it could even begin. LWR cost escalation in the main can be traced to large increases in both amounts and unit costs of construction materials and to greatly lengthened construction times. Innovative approaches to LMFBR design are now being pursued that show promise for substantial cost reductions particularly in those areas that have contributed most to LWR cost increases.

In 20 years of teaching this material to non-financial professionals, Dr. Bonner has perfected a teaching approach that works to help the non-financial professional engage with the material to use financial information in leveraging their career without becoming overloaded with information that is not helpful to them. Learning this material takes repetition, application, and building the thinking processes necessary for effectiveness. Many think the challenge with finance is the math, but as this book will demonstrate, it is a conceptual problem. If you understand the conceptual framework, you will understand the math. Management accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for management accounting and control. Management Accounting is becoming more and more international. ?Management Accounting and Control? is a new textbook in English covering concepts and instruments of management accounting at an introductory level (primarily at the Bachelor level, but also suited for general management and MBA courses due to a strong focus on practical relevance). This textbook covers all topics that are relevant in management accounting in business organizations that are typically covered in German and Central European Bachelor courses on management accounting and control. After a general introduction to the field of management accounting and control the book discusses cost management as an extension of cost accounting. Typical cost management instruments such as target costing, life cycle costing and process-based costing approaches are explained in detail. Differences between Anglo-American activity-based costing (ABC) and German process-based costing are highlighted. The book then turns to an extensive discussion of planning and budgeting tasks in management accounting with a strong focus on the practical application of the topic such as developing a budget in practice. Another chapter is dedicated to a comparison of traditional budgeting with modern /alternative budgeting approaches. A major part of the book is dedicated to the broad area of performance management. The relevance of financial statement information for performance management purposes is discussed in detail. In addition, the most widely spread financial performance indicators are illustrated using real-world examples. The book also includes detailed content on value-based management control concepts. In a consecutive chapter, performance measurement is linked with strategy while extensively discussing the Balanced Scorecard as a key tool in strategic performance management. The remaining parts of the book deal with management reporting as one of the main operative tasks in management accounting practice. The book closes with insight into new fields and developments that currently influence management accounting practices and research and promise to play an increasingly important role in the future.

This is the opus magnum of one of the world's most renowned experts on the history of economic thought, Bertram Schefold. It contains commentaries from the series Klassiker der Nationalökonomie (Classics of Economics), which have been translated into English for the first time. Schefold's choices of authors for this series, which he has edited since 1991, and his comments on the various re-edited works, are proof of his highly original and thought-provoking interpretation of the history of economic thought. Together with a companion volume, Great Economic Thinkers from Antiquity to the Historical School: Translations from the series Klassiker der Nationalökonomie, this book is a collection of English translations with introductions by Bertram Schefold. The emphasis of this volume is on the theoretical debates, from the theory of value to imperfect completion; from money to the institutional framework of society; and from the history of economic thought to pioneering works in mathematical economics. This volume is an important contribution to the history of economic thought, not only because it delivers original and fresh insights about well-known figures, such as Marx, Stackelberg, Sraffa, Samuelson, Tooke, Hilferding, Schmoller and Chayanov, but also because it deals with ideas and authors who have been forgotten or neglected in previous literature. This volume is of great interest to those who study the history of economic thought, economic theory and philosophy, as well as those who enjoyed the author's previous volume, Great Economic Thinkers from Antiquity to the Historical School.

Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. This is certainly also true for cost accounting and management accounting. Management Accounting is becoming increasingly international. "Management and Cost Accounting" is a new English language textbook covering concepts and instruments of cost and management accounting at an introductory level (Bachelor, but also suited for MBA courses due to strong focus on practical applications and cases). This textbook covers all topics that are relevant in management accounting in business organizations and that are typically covered in German and Central European Bachelor classes on cost accounting and management accounting. After an introduction to the topic, including major differences between the German approach and the purely Anglo-Saxon approach of management accounting, the book describes different cost terms and concepts applied in German cost accounting, The book is much more specific here compared to US-American standard textbooks. Based on different cost concepts, the topic of cost behavior is discussed, including the determination of cost functions. The heart of the book guides the reader through the general structure of a fully developed cost accounting system following the German and Central European standard: It starts with cost type accounting, moves on to cost center accounting and finally deals with cost unit accounting, assigning cost to goods and services offered in the market. The remaining parts of the book deal with decision making and how management and cost accounting data can support managers in this task. A comparison of absorption costing and variable costing introduces the reader to management decisions such as product portfolio and outsourcing decisions. Additionally, cost-volume-profit analysis (break-even-analysis) is covered. The book closes with a comprehensive treatment of cost planning and variance analysis.*
