Updated and revised as per the recent advances in the relevant field of nursing. The Australian Medical Council (AMC) put this book together to assist overseas-trained doctors appearing for the AMC AMCQ examination. This book is a valuable guide and self-assessment tool for this exam. It also illustrates the best-practice principles for a wide range of medical conditions found in the Australian community. All medical students will find this book an invaluable aid as an educational resource in preparation for their clinical assessments, as should postgraduate trainees preparing for higher degrees across the spectrum of general and specialist practice. The AAMI recommended practice, Comprehensive guide to steam sterilization and sterility assurance in health care facilities, is a breakthrough standard in terms of its scope. AAMI has updated ST79 with the release of ST79:2010/A4:2013. Of particular importance, A4:2013 provides four new figures demonstrating the wrapping of items for steam sterilization and adds an annex focused on Moisture assessment. As of Oct. 25, 2013, purchasers of ST79 will receive ANSI/AAMI ST79:2010 and A1:2010 and A2:2011 and A3:2012 and A4:2014 as a single consolidated document. Among other changes from the 2006 edition of ST79, this revised and expanded second edition of ST79 includes guidance on the use and application of Class 6 emulating indicators, a chemical monitoring device fairly new to the United States. Because ST79 essentially consolidates five AAMI steam sterilization standards (whose content was reviewed and updated to reflect current good practice prior to being incorporated into ST79), it truly is a comprehensive guideline for all steam sterilization activities in healthcare facilities, regardless of the size of the sterilizer or the size of the facility, and provides a resource for all healthcare personnel who use steam for sterilization.
