Mechanical plaque control is the most effective way in preventing periodontal diseases.

Chemical plaque control methods (such as mouthrinses) have been recommended to be used because

These proceedings record the symposia and lectures of researchers who

were essential to the process of bringing a clear picture of the changing patterns of the diagnosis and treatment of periodontal diseases to colleagues from around the world. More than a thousand dental professionals attended, with the

Online Library Chemical Plaque Control

speakers themselves drawn from more than 30 countries. The main symposium themes included recent advances in the diagnosis and treatment of periodontal diseases, chemical plaque control of gingivitis and periodontal

Online Library Chemical Plaque Control

disease, reappraisal of longitudinal studies, new surgical approaches to the regeneration of periodontal tissues and the periodontal application of dental implants. The reader will note, whilst reviewing the papers presented at this Congress, the

Online Library Chemical Plaque Control

gradual build up of an increasing awareness of the potential for regeneration of periodontal tissues. Current approaches draw upon chemotherapeutic and biological concepts which have emerged in the last decade, whilst other

Online Library Chemical Plaque Control

papers record the precision of increasingly sensitive ultrastructural and histochemical probes of disease activity. This book provides essential knowledge for creating treatment plans for adult dental patients. Treatment planning strategies are

Online Library Chemical Plaque Control

presented to help with balancing the ideal with the practical, with emphasis placed on the central role of the patient — whose needs should drive the treatment planning process. The focus is on planning of treatment, not on the

Online Library Chemical Plaque Control

comprehensive details of every treatment modality in dentistry. CD-ROM bound into book presents five cases of varying difficulty with interactive exercises that allow users to plan treatment.

Because of increasing antibiotic resistance, stronger antibiotics are reserved for serious active infection, paving the way for a

Online Library Chemical Plaque Control

integral to general well-being and relates to the quality-of-life that extends beyond the functions of the craniofacial complex. The standard Western medicine has had only limited success in the prevention of periodontal disease and in the treatment
