

Chinese Arms And Armour Arms And Armour Series

**The People's Republic of
China seeks to attain
military strength
commensurate with its
growing regional and
international influence
and to close the military-
technological gap which
has long separated it
from the other major
powers. To achieve its
military modernization
goals, China will continue
its efforts to import the**

critical weapons and technologies it requires. Yet, for reasons rooted in both historical and contemporary contexts, China faces many difficulties and setbacks in this quest. China's Arms Acquisitions from Abroad documents and analyses the 150-year effort by China to strengthen its military forces through arms imports. Based on an historical understanding of this process, the report focuses mainly on contemporary transfers of

weapons and technologies to China, particularly those from the Soviet Union and Russia, but also including imports from Israel, France, the United Kingdom, the United States and other suppliers. Relying on primary sources as well as on the most comprehensive collection of open-source data and information available on the subject, the report provides extensive documentation and a balanced assessment of past, current and likely

future developments regarding Chinese arms imports. This unique study will prove useful to experts and officials concerned with security and regional affairs in East Asia.

Japan is a mysterious and beguiling country, steeped in the deepest of traditions yet strikingly modern. Here, Curator Emeritus Ian Bottomley sheds light on one of the most popular facets of the Royal Armouries' collection, reflecting this mesmeric harmony of

arms and armor from the earliest stone spears to modern-day guns and tanks, and includes illustrations, puzzles, quizzes, and projects.

Jousting is the most iconic form of mounted combat. For more than five hundred years, the sport itself, and the chivalric culture that surrounded it, took on almost mythical qualities. Here, Tobias Capwell explains the glitz and glamour of a sport that attracted enormous popular audiences throughout the Middle Ages and the Renaissance. Though he deals almost exclusively with weapons and warriors, Capwell tells a story not of war and destruction, but of pageantry and valor. This is the

Armour and Arms of the Sixteenth, Seventeenth and Eighteenth Centuries ; Chinese Porcelain and Manuels ; Decorative Objects and Furniture

By H. Russell Robinson

Arms and Armour, Objects of Art, English and Chinese Porcelain Glossary of the Construction, Decoration and Use of Arms and Armor in All Countries and in All Times

In Arms and Armor of the Greeks, A. M. Snodgrass uses literary, archaeological, and artistic evidence to piece together a picture of ancient Greek armory from the Mycenaean period through the campaigns of Alexander the Great. Ancient Greece was neither populous nor rich in natural resources, Snodgrass explains, so it is remarkable that the Greeks succeeded in battle as often as they did. The history of China is a history of warfare. Rarely in its 3,000-year existence has the country not been beset by war, rebellion, or raids. Warfare was a primary source of innovation, social evolution, and

Online Library Chinese Arms And Armour Arms And Armour Series

material progress in the Legendary Era, Hsia dynasty, and Shang dynasty -- indeed, war was the force that formed the first cohesive Chinese empire, setting China on a trajectory of state building and aggressive activity that continues to this day. In *Ancient Chinese Warfare*, a preeminent expert on Chinese military history uses recently recovered documents and archaeological findings to construct a comprehensive guide to the developing technologies, strategies, and logistics of ancient Chinese militarism. The result is a definitive look at the tools and methods that won wars and shaped culture in ancient China.

The idea of late medieval arms and

Online Library Chinese Arms And Armour Arms And Armour Series

armour often conjures up images of lumbering warriors, clad in heavy plate armour, hacking away at with each other with enormous weapons - depictions perpetuated in both bad literature and bad movies. In this book, internationally-renowned edged weapons expert Robert Woosnam-Savage describes the brutal reality of personal protection and attack in the so-called age of chivalry'. From Bannockburn to Bosworth, Poitiers to Pavia, this book is an indispensable introduction to an iconic era.

Chinese Arms and Armour

Long a vital sourcebook of information on the military history of India, this excellently illustrated volume provides factual accounts of events ranging from the earliest invasions of the subcontinent in 200 b.c. to the First Burmese War in 1824. A shorter section of the book includes detailed information on Arabian and Persian arms and Japanese armor. Illustrations and notes describe helmets, daggers, sabers, maces, blowpipes, and other weapons--all grouped according to geographical areas. A

comprehensive reference for enthusiasts of arms, armor, and military history. New Introduction. 350 halftones and line illustrations. The contributions in this volume give an impression of contemporary archaeological, art historical, and historical research in military equipment of and under the influence of nomadic peoples in Eurasian history. The studies cover a considerably long time span and a broad territory: from the Iron Age up to the Middle Ages, and from Central Europe to the heartlands of China. Aside from strategical and tactical points of view, reasons for nomadic successes in warfare can obviously

be seen in their equipment, the systems of weaponry, armour and accessories. These questions about nomadic military equipment are questions for the archaeologist. Analyzing and reconstructing forms, establishing typological sequences, comparing enhancements with shortcomings of arms and armour, the archaeologist is in the position to supplement facts to written history of campaigns and the reasons for successful or lost wars. But of course, this special field of contemporary archaeology should not be merely defined as a "military archaeology". Arms and armour have to be explained within their

And Armour Arms And Armour
Series

archaeological context; that is, as parts of a complex system of remains from past societies. And seen from this perspective, they also explain, beyond their primary character as military sources, the broader sphere of life of nomadic peoples, their efforts in technology and in art, and key aspects of their spiritual world. One special value of arms and armour as an archaeological and art-historical source is its potential to indicate the sharing of knowledge, of technology, but also of experience in a broader sense among completely different cultures. For this reason, the articles in this volume are well established within
