"Preparing students for a standardized test is a monumental task, but equipping them for social and interpersonal conflict is every bit as challenging. This five-part series helps young viewers navigate the dilemmas surrounding bullying, peer pressure, prejudice, and unresolved anger--with an additional program focusing especially on conflict management and resolution. Emphasizing character-building as a prime ingredient in overcoming conflict, the series uses no-nonsense dramatizations, candid 'school hallway' interviews, and expert commentary to define basic ideas, illustrate ways in which conflicts often play out, and ultimately present methods for diffusing them--based on honesty, awareness, and respect for others."--Publisher's web site. Before the advent of the widespread use of the internet, bullying was confined to school grounds, classrooms, and backyards. Now, the virulence of bullying has taken on new meaning, as bullies take to the web to intimidate, harrass, embarrass, and offend others. Through email, cell phones, text messaging, and social networking sites, bullies can carry out their bullying in many cases without ever having to confront their victims, and often without consequence. Whereas the audiences for humiliation in the past was often limited to those who witnessed the bullying and perhaps talked to others about it, now, bullying takes place in cyberspace, where images and audio can be posted online for whole school communities to witness, discuss, and comment on. The social, psychological, and sometimes economic trauma experienced by victims can be devastating, and in some cases, cyber bullying has crossed the line and became a criminal act. Because just about anyone can be the victim of cyber bullying, and because it often goes unreported, there are precious few resources available to victims, parents, teachers, and others

Bullying has long been tolerated as a rite of passage among children and adolescents. There is an implication that individuals who are bullied must have "asked for" this type of treatment, or deserved it. Sometimes, even the

child who is bullied begins to internalize this idea. For many years, there has been a general acceptance and collective shrug when it comes to a child or adolescent with greater social capital or power pushing around a child perceived as subordinate. But bullying is not developmentally appropriate; it should not be considered a normal part of the typical social grouping that occurs throughout a child's life. Although bullying behavior endures through generations, the milieu is changing. Historically, bullying has occurred at school, the physical setting in which most of childhood is centered and the primary source for peer group formation. In recent years, however, the physical setting is not the only place bullying is occurring. Technology allows for an entirely new type of digital electronic aggression, cyberbullying, which takes place through chat rooms, instant messaging, social media, and other forms of digital electronic communication. Composition of peer groups, shifting demographics, changing societal norms, and modern technology are contextual factors that must be considered to understand and effectively react to bullying in the United States. Youth are embedded in multiple contexts and each of these contexts interacts with individual characteristics of youth in ways that either exacerbate or attenuate the association between these individual characteristics and bullying perpetration or victimization. Recognizing that bullying behavior is a major public health problem that demands the concerted and coordinated time and attention of parents, educators and

When it comes to raising children in a digital world, every parent feels underprepared and overwhelmed. We worry that our children will become addicted to online games, be victims of cyberbullying, or get lost down the rabbit hole of social media. We warn them about all the things they shouldn't do online, but we don't do nearly enough to teach them the skills of digital well-being. It's time to start a new conversation. In *Digital for Good*, EdTech expert Richard Culatta argues that technology can be a powerful tool for learning, solving humanity's toughest problems, and bringing us closer together. He offers a refreshingly positive framework for preparing kids to be successful in a digital world—one that encourages them to use technology proactively and productively—by outlining five qualities every young person should develop in order to become a thriving, contributing digital citizen: Be balanced: understand when and how much tech use is healthy Stay informed: discern between true and false information Be inclusive: treat others with respect and kindness online Be engaged: use tech to strengthen family relationships and community connections Stay alert: exercise caution and create safe digital spaces for others This practical guide will help parents and children discover the path to becoming effective digital citizens, all while making our online world a better place.

developing protective factors against the impacts of cyberbullying and contains a range of perspectives to deal positively with cyberbullying as well as a summary of international research. Cyberbullying occurs when any means of technology is used to repeatedly and deliberately engage in bullying behaviours with the intent to cause harm to others. Although anyone can be affected, young people who are also being bullied offline are more likely to be the target of cyberbullying. Forms of cyberbullying include:

- abusive texts and emails
- posting messages or images
- imitating and excluding others online
- inappropriate image tagging.

Cyberbullying differs from face-to-face bullying.

- a sense of anonymity for those who bully
- can occur 24/7 and is invasive
- can have a large audience
- difficult to delete comments and images.

Despite the significant decrease in bullying that has been reported in many countries during the last two decades, bullying continues to be a significant problem among young people. Given the increase of internet use among youth, researchers have started to pay attention to cyberspace, understanding that it may be a fertile ground for bullying behaviors, specifically, what is known as cyberbullying. "Family, Bullying and Cyberbullying" examines the association of several family variables with bullying in offline and online environments during childhood and adolescence. Contributors from the Americas, Canada, Asia, and Europe offer cutting-edge research on family dynamics, bystander behaviors, parents' and educators' perceptions, and bullying and cyberbullying prevention and intervention strategies of bullying for school and home. This book also provides an analysis of the current research on the influence of family in the electronic bullying. Research topics

included in the book: 1) Parental education and bullying and cyberbullying; 2) Parental monitoring and cyberbullying; 3) Parental communication and feelings of affiliation; 4) Student and educator perspective on cyberbullying; 5) Parents' responses to bullying; 6) Parental mediation and bystander behaviors; 7) Development of scales to measure cyberbullying and high internet risks. "Family, Bullying and Cyberbullying" is an essential resource for researchers, graduate students, families, and practitioners in social education, social work, teacher education, and psychology. This edited book presents the most recent theory, research and practice on information and technology literacy as it relates to the education of young children. Because computers have made it so easy to disseminate information, the amount of available information has grown at an exponential rate, making it impossible for educators to prepare students for the future without teaching them how to be effective information managers and technology users. Although much has been written about information literacy and technology literacy in secondary education, there is very little published research about these literacies in early childhood education. Recently, the National Association for the Education of Young Children and the Fred Rogers Center for Early Learning and Children's Media at Saint Vincent College published a position statement on using technology and interactive media as tools in early childhood programs. This statement recommends more research "to better understand how young children use and learn with technology and interactive media and also to better understand any short- and long-term effects." Many assume that today's young children are "digital natives" with a great understanding of technology.

Download Ebook Cyberbullying Tech Safety Smarts Fact Finders

However, children may know how to operate digital technology but be unaware of its dangers or its value to extend their abilities. This book argues that information and technology literacy include more than just familiarity with the digital environment. They include using technology safely and ethically to demonstrate creativity and innovation; to communicate and collaborate; to conduct research and use information and to think critically, solve problems and make decisions.
