Macro-level study of the South Atlantic throughout the sixteenth and seventeenth centuries demonstrating how Brazil's emergence was built on the longest and most intense slave trade of the modern era. The seventeenth-century missionary and diplomat Father Antônio Vieira once observed that Brazil was nourished, animated, sustained, served, and conserved by the "sad blood" of the "black and unfortunate souls" imported from Angola. In *The Trade in the Living*, Luiz Felipe de Alencastro demonstrates how the African slave trade was an essential element in the South Atlantic and in the ongoing cohesion of Portuguese America, while at the same time the concrete interests of Brazilian colonists, dependent on Angolan slaves, were often violently asserted in Africa, to ensure men and commodities continued to move back and forth across the Atlantic. In exposing this intricate and complementary relationship between two non-European continents, de Alencastro has fashioned a new and challenging examination of colonial Brazil, one that moves beyond its relationship with Portugal to discover a darker, hidden history.

The first book-length investigation of colonial gender politics in Third Republic France, using Indochina as a case study, charts women's experiences and activities to reveal a transformation in French views of empire: from colonial life as an exclusively male preserve to one where women's presence was seen as essential.

Back Cover Copy: Infectious Diseases and Antimicrobial Stewardship in Critical Care Medicine 4E has been fully updated and revised. The clinical diagnostic approach to common infectious disease problems in the CCU is the underlying theme in the book. Emphasized throughout is the importance of formulating an accurate early presumptive clinical syndromic diagnosis which is the basis for selecting optimal initial antimicrobial therapy in the CCU. Without an accurate presumptive clinical diagnosis, effective therapy is unlikely at best. Based on the most probable clinical diagnosis, optimal antibiotic empiric therapy, based on antimicrobial stewardship principles, minimizes resistance and antibiotic complications in the CCU. This new edition features chapters that explain the tenets of differential diagnostic reasoning, differential diagnostic characteristics of fever patterns in the CCU. The proper interpretation of rapid diagnostic tests, in the appropriate

clinical context, is included. The diagnostic importance of cardinal clinical findings, particularly when combined, in the appropriate clinical context is emphasized and remains the basis for clinical problem solving in the CCU. Uniquely, critical diagnostic physical findings in the CCU, including color atlas of diagnostic eye findings, are included as important diagnostic determinants in the CCU. Written by infectious disease clinicians for CCU consultants, *Infectious Diseases and Antimicrobial Stewardship in Critical Care Medicine 4E* remains a useful evidence based and experience tempered key clinical resource for infectious disease problems in the CCU. Key Features Essentials of the tenets of clinical diagnostic reasoning is explained as it relates to formulating a rapid and accurate clinical syndromic diagnosis in the CCU The diagnostic significance of fever patterns and their relationship to the pulse rate in the proper clinical context is explained in depth as related to the CCU setting Formulating an accurate early clinical syndromic diagnosis is presented as essential since it is the basis of effective empiric antibiotic therapy in the CCU How to combine key non-specific laboratory and imaging findings to increase diagnostic specificity and diagnostic probability in the CCU is presented Clinical

perspective on the proper interpretation of the clinical significance of rapid diagnostic test results in the CCU is included A clinical approach to apparent "antibiotic failure" in the CCU is presented either due to actual antibiotic failure or seeming but unrelated non-antibiotic failure Section focuses on the practical aspects of antimicrobial stewardship particularly as related to optimizing dosing effectiveness while minimizing resistance and adverse effects in the CCU

*Textbook of Peritoneal Dialysis. The work quickly became recognised as the gold standard' for those working in the field. Since its conception, however, our understanding of peritoneal dialysis related physiology, kinetics and clinical outcomes, as well as the concepts of intraperitoneal chemotherapy, has increased sufficiently to make an updated and completely revised edition of the work necessary. An expansion of the editorial team by fellow-experts Ramesh Khanna and Raymond Krediet enabled an even more comprehensive approach to be taken. This second edition reasserts the book's uniqueness in its detailed discussion of the topic, making it required reading for all those working within the field of peritoneal dialysis. *retribution? This groundbreaking book presents a panoramic view of attitudes to empires past and present, seen not only through the hard politics of international power structures but also through the nuances of memory, historiography and national and minority cultural identities. Bringing together leading historians, political scientists and international relations scholars from across the globe, Echoes of Empire emphasizes Europe's colonial legacy whilst also highlighting the importance of non-European power centres- Ottoman, Russian, Chinese, Japanese- in shaping world politics, then and now. Echoes of Empire bridges the divide between disciplines to trace the global routes travelled by objects, ideas and people and forms a radically different notion of the term 'empire' itself. This will be an essential companion to courses on international relations and imperial history as well as a fascinating read for anyone interested in Western hegemony, North-South relations, global power shifts and the longue duree.*

The Cambridge Prehistory of the Bronze and Iron Age Mediterranean offers new insights into the material and social practices of many different Mediterranean peoples during the Bronze and Iron Ages, presenting in particular those features that both connect and distinguish them. Contributors discuss in depth a range of topics that motivate and structure Mediterranean archaeology today, including insularity and connectivity; mobility, migration, and colonization; hybridization and cultural encounters; materiality, memory, and identity; community and household; life and death; and ritual and ideology. The volume's broad coverage of different approaches and contemporary archaeological practices will help practitioners of Mediterranean archaeology to move the subject forward in new and dynamic ways. Together, the essays in this volume shed new light on the people, ideas, and materials that make up the world of

Mediterranean archaeology today, beyond the borders that separate Europe, Africa, and the Middle East.

*Religion in today's Democratic Republic of Congo has many faces: from the overflowing seminaries and Marian shrines of the Catholic Church to the Islamic brotherhoods, from the healers of Kimban-guism to the televangelism of the booming Pentecostalist churches in the great cities, from the Orthodox communities of Kasai to the 'invisible' Mai Mai warriors in the brousse of Kivu. During the colonial period religion was no less central to people's lives than it is today. More surprisingly, behind the seemingly smooth facade of missions linked closely to imperial power, faith and worship were already marked by diversity and dynamism, tying the Congo into broader African and global movements. The contributions in this book provide insight into*

*the multifaceted history of the interaction between religion and colonization. The authors outline the institutional political framework, and focus on the challenge that old and new forms of slavery entailed for the missions. The atrocities committed at the time of the Congo Free State became an existential question for young Christian communities. In the Belgian Congo after 1908, more structural forms of colonial violence remained a key issue marking religious experiences. And yet, religion also acted as a bridge. The authors emphasize the role intermediaries such as catechists or medical assistants played in the African "appropriation" of Christianity. They examine the complex interaction with indigenous religious beliefs and practices, and zoom in on the part religions played in the independence movement, as well as on their reaction to independence itself. Coming at a moment when Belgium confronts its colonial past, this volume provides a timely reassessment of religion as a key factor.*

**How did the classical Greek city come into being? What role did religion play in its formation? Athens, with its ancient citadel and central religious cult, has traditionally been the model for the emergence of the Greek city-state. But in this original and controversial investigation, Francois de Polignac suggests that the Athenian model was probably the exception, not the rule, in the development of the polis in ancient Greece. Combining archaeological and textual evidence, de Polignac argues that the eighth-century settlements that would become the city-states of classical Greece were defined as much by the boundaries of "civilized" space as by its urban centers. The city took shape through what de Polignac calls a "religious bipolarity," the cults operating both to organize social space and to articulate social relationships being not only at the heart of the inhabited area, but on the edges of the territory. Together with the urban cults, these sanctuaries "in the wild" identified the polis and its sphere of influence, giving rise to the concept of the state as a territorial unit distinct from its neighbors. Frontier sanctuaries were therefore often the focus of disputes between emerging communities. But in other instances, in particular in Greece's colonizing expeditions, these outer sanctuaries may have facilitated the relations between the**

This stimulating analysis of Europe's role in world history focuses on Western economic expansion into the regions loosely known as the "Third World." Bernard Waites begins with the very origins of the term "Third World" and the attempts to theorize global inequality in modern history on the part of the "dependency" writers and those writing from a "world systems" perspective. Subsequent chapters analyze the intercontinental connections forged by Europeans with Latin America, Asia, Africa and South Asia, challenging many common assumptions about the Third World's history and providing an essential context to contemporary debates about post-colonialism.
