

Deutschland 2019 2020

The German economy entered a deep recession in 2020 due to the coronavirus pandemic. A strong government response has reinforced health system capacity while protecting jobs and firms. The response to the crisis has included increases in investment to meet structural challenges from the energy transition and digital transformation.

People were once restricted to food native to their region and produced locally. Today, however, food from any place in the world is available, or can be made available, anywhere else. Often there is no or very little information about the nutritional and health aspects of these foods. Nutrition and Health of Western European Foods: Traditional and Ethnic Diets is part of series that will cover the entire globe and is aimed at filling the knowledge gap from traditional and scientific points of view. This volume provides an analysis of traditional and ethnic foods from Western Europe, including Ireland, the United Kingdom, Netherlands, Belgium, Luxembourg, France, and Germany. It also addresses the history of use, composition, preparation, ingredient origin, nutritional aspects, and health effects of various foods and food products in each of these countries. Nutrition and Health of Western European Foods: Traditional and Ethnic Diets ultimately presents both local and international regulations, providing suggestions to harmonize these regulations and promote global availability of these foods. Analyzes nutritional and health claims related to western European foods Includes traditional and ethnic foods from Ireland, the UK, Netherlands, Belgium, Luxembourg, France, and Germany Explores both scientific and anecdotal diet-based health claims Examines if foods meet regulatory requirements, and how to remedy noncompliance Reviews the influence of historical eating habits on today's diets

Nachdenken über Deutschland

Using UNESCO's Internet Universality ROAM-X Indicators

This book explores the importance of freedom and liberalism in the context of socialities, individualities and materialities. The authors provide a highly unusual and innovative blending of concepts about space and landscape through a deeply theoretical exploration of liberalism. Liberalism is often problematized in contemporary discussions with regard to gentrification, environmental problems and inequality. In contrast, this book refers to a liberalism that maximizes life chances in the context of dealing with spaces. A connection between freedom and space, based on liberal ideas, provides a much needed theoretical intervention in the fields of social and spatial sciences.

Standortmarketing wird meist synonym für Regional-, Stadtteil- und Citymarketing gebraucht und

umfasst weit mehr als Wirtschaftsförderung. Sämtliche Maßnahmen zielen darauf ab, Unternehmen und Organisationen zur Ansiedlung bzw. zum Bleiben zu bewegen. Dabei wird der Standort als strategisch gestaltbare Dienstleistung verstanden: Größere Bekanntheit und ein besseres (Marken-)Image sollen neben der Bereitstellung von geeigneten Infrastrukturen die primäre Zielgruppe Arbeitgeber, aber auch Touristen, Investoren, qualifizierte Arbeitskräfte u.a. ansprechen und zusätzliche Kaufkraft vor Ort bringen. Dabei kommt neben dem strategischen Einsatz passender Marketinginstrumente auch den Methoden des Stakeholdermarketings große Bedeutung zu.

Radical Right Populism in Germany

Mobility in Germany

das Stipendienprogramm des PEN-Zentrums Deutschland

Future German pensioners will face a pension gap in retirement age if they base their income exclusively on the statutory pension. Conventional private pension alternatives are not lucrative, but they are still the most widely used. Exchange-traded funds (ETFs) have features that make them particularly attractive for pension provision. The aim of this dissertation is to discover which factors influence the acceptance formation process and thus the usage of ETFs. Therefore, a model is developed that is based conceptually on the widely known technology acceptance model (TAM) and theoretically on the results of a comprehensive literature analysis, which summarises already identified obstacles within old-age provision. This model is then tested using an online survey on future German pensioners aged between 19 and 59 years (n=615). The descriptive statistics are then calculated for the recorded data, and subsequently, the relationships within the variable model are analysed for significant dependencies. The results show that the assumed external variables have an influence on the acceptance of ETFs. In particular, the variable of financial literacy as an indicator of a person's general financial knowledge turns out to be of overriding importance within the acceptance formation process. Furthermore, the results show that the use of an ETF is well recognised, but that it is still too complex to obtain information or acquire an ETF, which ultimately hampers acceptance formation, and thus the use. Finally, two concepts are developed that would have a positive influence on acceptance in different ways; they focus on different variables and behavioural patterns that still act as obstacles, thereby increasing the overall use of ETFs in Germany. Mobility in Germany is embracing market changes like never before. Megatrends, notably, digitalization, urbanization and sustainable thinking are driving Germany's mobility transformation such that traditional players are rethinking their business models and new companies are constantly seeking market penetration. This book captures these changes in a holistic approach to depict Germany's mobility transition driven by innovation. Beginning with an evaluation of the market environment and megatrends impacting mobility, the book compares and contrasts traditional mobility business models with those of the new entrants. Using business management techniques and a detailed survey on customer perspectives, this book equips mobility professionals, policymakers, entrepreneurs and researchers with concise, critical and up-to-date analysis of the developments in German mobility and provides valuable insights into new business models that offer user-oriented, futuristic and sustainable mobility solutions.

Assessing Internet Development in Germany

Yearbook of Sustainable Smart Mining and Energy 2021

This book is at the center of the UN goals of combining environment and economic development with new technologies. First, sustainability in mining is defined as a process of transformation. This is followed by an outlook on the aspects of safety, economy, environmental impact and digital transformation. The book includes a discussion of new aspects such as the problem of liability for mining damages regarding climate change in Peru. Specific technical issues in smart mining are covered as well, such as underground localization systems based on ultra-wide band radio and inertial navigation, or the use of thermal imaging for roof crack detection. In addition, the characterization of material flows, subsurface hydrogen-storage systems and the prediction of mining induced subsidence and uplift are dealt with. The Sustainable Smart Mining and Energy Yearbook is not only aimed at researchers professionals, but at all who want to get an overview of the important technical and legal topics in this field.

Germany has a strong skill development system. The country's 15-year-old students performed above the OECD average in the last (2018) edition of the Programme for International Student Assessment (PISA), continuing a trend of significant improvement since PISA's first edition in 2000.

This textbook introduces readers to the most relevant aspects of Investment Evaluation in the context of enterprise evaluation. It utilises a clear didactic concept and concisely presents representative cases, supported by calculations and their step-by-step, Excel-based solutions. In addition, the book analyses the respective benefits of the calculation models discussed from a management standpoint.

This book provides a comprehensive analysis of radical right populism in Germany. It gives an overview of historical developments of the phenomenon and its current appearance. It examines three of the main far-right organizations in Germany: the radical right populist party AfD (Alternative for Germany), Pegida (Patriotic Europeans against the Islamification of the Occident), and the Identitarian Movement. The book investigates the positions of these groups as expressed in programmes, publications, and statements of party leaders and movement activists. It explores their history, ideologies, strategies, and their main activists and representatives, as well as the overlap between the groups. The ideological positions examined include populism, nativism, authoritarianism, volkish nationalism, ethnopluralism, xenophobia, Islamophobia, antisemitism, antifeminism, and Euroscepticism. The analysis shows that these ideological features are sometimes strategically interlinked for effect and used to justify specific political demands such as the stronger regulation of immigration and the exclusion of Muslims. This much-needed volume will be of particular interest to students and researchers of German politics, populism, social movements, party politics, and right-wing extremism.
