A biographical record of contemporary achievement together with a key to the location of the original biographical notes. The World Investment Report series provides the latest data and analysis foreign direct investment (FDI) and other activities of transnational corporations, as well as the policies to regulate them at the national and international levels. It aims to analyse the cross-border activities of translational corporations and related policy measures with a view to helping policymakers formulate appropriate policy responses.

In its struggle for independence, Bangladesh became the focal point of world attention in the early 1970s. It emerged victorious, but its development was hindered by the after-effects of the war—the destruction of much of its infrastructure, problems of governmental change, and the enormous difficulties faced by government and aid officials in assembling a data base for long-range planning. Professor Rashid's book—the first major comprehensive geographic inventory of Bangladesh—provides the key elements for such a base. Emphasizing the rural and agricultural characteristics of the country, it also covers in depth its physiography, hydrography, climate, soils, land utilization, migration and settlement patterns, transportation infrastructure, and human and natural resources.

*The routine jobs of yesterday are being replaced by technology and/or shipped off-shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and affective skills. Often referred to as "21st century skills," these skills include being able to solve complex problems, to think critically about tasks, to effectively communicate with people from a variety of different cultures and using a*

*variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops, with special attention to recent developments in technology-enabled assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below: Cognitive skills: nonroutine problem solving, critical thinking, systems thinking Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both parts of the third workshop.*

*This publication is part of a series of six country reports on technical and vocational education and training (TVET) and higher education in Bangladesh, Nepal, and Sri Lanka. Each report presents current arrangements and initiatives in the respective country's skills development strategies. These are complemented by critical analyses to determine key issues, challenges, and opportunities for innovative strategies toward global competitiveness, increased productivity, and inclusive growth. The emphasis is to make skills training more relevant, efficient, and responsive to emerging domestic and international labor markets. The reports were finalized in 2013 under the Australian AID-supported Phase 1 of Subproject 11 (Innovative Strategies for Accelerated Human Resource Development) of Regional Technical Assistance 6337 (Development Partnership Program for South Asia).*

Providing the poor with access to financial services is one of many ways to help increase their incomes and productivity. In many countries, however, traditional financial institutions have failed to provide this service. Microcredit and co-operative programmes have been developed to fill this gap. Their purpose is to help the poor become self-employed and thus escape poverty. Many of these programmes provide credit using social mechanisms, such as group-based lending, to reach the poor and other clients, including women, who lack access to formal financial institutions. With increasing assistance from the World Bank and other donors, microfinance is emerging as an instrument for reducing poverty and improving the poor's access to financial services in low-income countries. This text examines the experiences of the Grameen Bank and two other major microcredit programmes in Bangladesh in order to quantify the potential and limitations of microcredit programmes as an instrument for reducing poverty and delivering financial services to the poor.

Oxford Specialty Training is a specialty revision series for postgraduate trainees taking into account the training structures and syllabuses and the busy lives of junior doctors. Training in Medicine is a complete guide to early years specialty training in medicine, and particularly focuses on core medical training. Essential for those taking the MRCP, the book covers all of the relevant areas in general medicine training, including epidemiology, evidence based medicine, and professional related issues. Each chapter covers the basic science and clinical topics which trainees are required to learn as part of their basic training and demonstrate in the MRCP. This book is authored by both trainees and specialists, and has been comprehensively edited and peer-reviewed by both groups in order to create an authoritative yet accessible text. Easy navigation is combined with discrete double-page spreads on individual topics allowing rapid access to information, making the book extremely useful in clinical practice. This is complemented by over 600 full colour illustrations, including high quality clinical photographs, images and diagrams, to aid visual memory of the topics. Breakout boxes highlight the key learning points. The organisation of the material is unique, and the topic-based design ensures easy navigation, and structured revision and learning.

There are many distinct pleasures associated with computer programming. Craftsmanship has its quiet rewards, the satisfaction that comes from building a useful object and making it work. Excitement arrives with the flash of insight that cracks a previously intractable problem. The spiritual quest for elegance can turn the hacker into an artist. There are pleasures in parsimony, in squeezing the last drop of performance out of clever algorithms and tight coding. The games, puzzles, and challenges of problems from international programming competitions are a great way to experience these pleasures while improving your algorithmic and coding skills. This book contains over 100 problems that have appeared in previous programming contests, along with discussions of the theory and ideas necessary to attack them. Instant online grading for all of these problems is available from two WWW robot judging sites. Combining this book with a judge gives an exciting new way to challenge and improve your programming skills. This book can be used for self-study, for teaching innovative courses in algorithms and programming, and in training for international competition. The problems in this book have been selected from over 1,000 programming problems at the Universidad de Valladolid online judge. The judge has ruled on well over one million submissions from 27,000 registered users around the world to date. We have taken only the best of the best, the most fun, exciting, and interesting problems available.

Use your knowledge of pharmacology to enhance oral care! Pharmacology and Therapeutics for Dentistry, 6th Edition describes how to evaluate a patient ' s health and optimize dental treatment by factoring in the drugs they take. It explores the basic fundamentals of pharmacology, special topics such as pain control, fear and anxiety, and oral complications of cancer therapy, and most importantly, the actions of specific drug groups on the human body. Whether you ' re concerned about the drugs a patient is already taking or the drugs you prescribe for treatment, this book helps you reduce risk and provide effective dental care. An emphasis on the dental applications of pharmacology relates drugs to dental considerations in clinical practice. Dental aspects of many drug classes are expanded to include antibiotics, analgesics, and anesthetics. The Alternative Medicine in Dentistry chapter discusses chemicals used as alternative medicines and assesses their potential benefits and risks. The Nonopioid Analgesics chapter groups together non-opioid analgesics, nonsteroidal anti-inflammatory drugs, and antirheumatic and antigout drugs, making these easier to locate and study. Coverage of the endocrine system includes four separate chapters for the most comprehensive coverage. Drug Interactions in Clinical Dentistry appendix lists potential interactions between drugs a patient is taking for nondental conditions and drugs that may be used or prescribed during dental treatment, including effects and recommendations. Glossary of Abbreviations appendix includes the most common abbreviations used for drugs or conditions. New Pharmacogenetics and Pharmacogenomics chapter covers the effects of genetic traits of patients on their responses to drugs. A NEW introductory section offers tips for the study of dental pharmacology and relates pharmacology to dental considerations. An updated discussion of drug-drug interactions covers the harmful effects of mixing medications.

Coverage of adverse effects and mechanisms of COX-2 inhibitors, antibiotic prophylaxis, and antiplaque agents explains the dental risks relating to common drug treatments.

Textbook of Oral and Maxillofacial Surgery is a comprehensive guide to the field for trainee dental students. The book covers basic procedures performed in general practice, as well as more advanced and complex surgical management techniques in the hospital environment. Presented in an easy to follow format, the text is divided into twelve sections, each discussing different oral and maxillofacial disorders, their diagnosis and appropriate medical and surgical management techniques. The final sections offer trainees advice on thesis writing and seminar presentation, and quick reference appendices describe commonly prescribed investigations in surgical practices, their values and interpretation. Photographs and drawings show various clinical conditions and demonstrate basic surgical techniques. Salient points for each topic are highlighted in text boxes, along with extensive referencing in every chapter. Key points Comprehensive guide to oral and maxillofacial surgery for trainee dental students Covers basic and advanced medical and surgical management techniques Includes advice on thesis writing and seminar presentation Includes more than 1200 clinical photographs, drawings and tables

**First multi-year cumulation covers six years: 1965-70.**

**Pain is a symptom of many clinical disorders, afflicts a large proportion of the population and is largely treated by pharmacological means. However, the two main classes of drugs used are the opioids and the non-steroidal anti inflammatory drugs, drugs that have a long history. The last decade has seen remarkable advances in our understanding of some of the pharmacological bases of pain and analgesia and this book aims to reflect these rapid changes in our understanding of pain mechanisms. One impetus to these scientific advances has been dialogue and interactions between scientists and clinicians; as a result we now has a number of animal models of clinical pain states, to mimic certain aspects of clinical pathophysiological pain states. Molecular aspects of receptors and the synthesis**

**of tools for probing receptor function have also been rapid growth areas. A number of controlled clinical studies using novel licensed drugs have also resulted from recent research, offering hope to certain patients with severe intractable pain. However, we desperately need the pharmaceutical industry to develop new drugs based on these novel targets for analgesic therapy. This book attempts to provide an overview of the important areas of the pharmacology of pain. This book, although providing an account of the pharmacology of pain transmission and its control based on the underlying anatomical organization and physiological responses, does not attempt to cover these latter two areas.**
