Ludwig Wittgenstein once remarked, "I think the good in Austria is particularly difficult to understand. In a certain sense it is more subtle than all the rest, and its truth is never on the side of probability." For forty years official Austria, christened by the Allies as Hitler’s first "victim," waged that the sedulously cultivated visions of cherubic choir boys, Lippizaner horses, and Mozartkugels could seduce the world into ignoring another truth about Austria, that of Wehrmacht soldiers, antisemitic slurs, and cheering crowds on Heldenplatz. The debate surrounding Kurt Waldheim dashed such "improbable" illusions permanently. Richard Mitten seeks to discover the "truth" behind the Waldheim controversy in its historical and political context. Whereas other books have focused on Waldheim’s personal biography, Mitten argues that the essential point in the Waldheim affair is not Waldheim himself but the political and cultural climate that made his election possible. Mitten examines Waldheim’s 1986 presidential election campaign, which both elicited and profited from profound chauvinistic and antisemitic resentments. The Politics of Antisemitic Prejudice is also the first book in English to study the dynamics of the Waldheim affair in the Austrian and American media. The author demonstrates how mistaken perceptions led both Waldheim’s supporters and his critics to press their nearly dimetrically opposed convictions with an identical moral vocabulary. Finally, Mitten re-examines the debate over Waldheim’s criminality and suggests that the former UN Secretary General has come to stand as the symbol of a more general postwar unwillingness or inability to adequately confront the implications of the Nazi abomination.

Easy to use, and useful when kept close at hand in the room where you work. The book is a pleasure to read: the style elegant and authoritative.' Lancet '...this book is a wonderful reference to enable primary physicians to be informed about their patients.' Annals of Internal Medicine Universally used across the world by genetic counsellors, medical geneticists and clinicians alike, Harper’s Practical Genetic Counselling has established itself as the essential guide to counselling those at risk from inherited disorders. Increasingly, common disorders are known to have a genetic component and this book provides invaluable and up to date guidance through the profusion of new information in this area and the associated psychosocial and ethical considerations and concerns. Within its established, tried and trusted framework, the book contains new chapters on: laboratory methods, new genetic sequencing techniques and the applications of genome-wide SNP association studies, genetic susceptibility, cross cultural aspects and the genetic counselling process. It has expand chapters on genetic screening and screening of newborn, treatment techniques and rational approaches to treatment, non-Mendelian inheritance, free fetal DNA in prenatal screening and diagnosis. Key features: - Fully updated to provide the very latest information when in a busy consulting room or clinic - Clear and authoritative advice applicable to everyday clinical practice - Reflects the rapid development of knowledge in this area, including the implications of the human genome project and related technology The eighth edition of this popular, best selling text continues to be an essential source of reference for trainee and practitioner genetic counsellors, medical geneticists and clinicians. Also it provides valuable background for specialist nurses, counsellors, social scientists, ethicists as well as genetics laboratory staff.

This is an edited volume based on the 2007 Conference on Metadata and Semantics Research (MTSR), now in its second meeting. Metadata research is a pluri-disciplinary field that encompasses all aspects of the definition, creation, assessment, management and use of metadata. The volume brings together world class leaders to contribute their research and up-to-date information on metadata and semantics applied to library management, e-commerce, e-business, information science and librarianship, to name a few. The book is designed for a professional audience composed of researchers and practitioners in industry.

No industry has expanded faster than telecommunications, gained so many new users, added so much value, spread so rapidly to the underdeveloped areas of developing countries, done so much to close the digital divide and provide access to e-learning, e-health, and e-commerce across the countries of the Asia Pacific. Telecommunications Development in Asia provides a completely new and comprehensive analysis of the policies adopted throughout the region that have led to the explosive growth of this sector. It is a sequel to the 1995 landmark publication, John Ure (editor) Telecommunications in Asia: Policy, Planning and Development, and like the earlier volume will become a popular and indispensable guide for professionals, policy-makers and regulators working in telecommunications-related sectors. Part One of this new book is thematic. It reviews global best practices across a range of key issues facing the industry, from regulation, competition policy and the provision of universal service, to interconnection between competing networks, the management of radio spectrum for the all-important wireless communications sector, and an assessment of innovation in the telecommunications equipment market. Part Two examines markets across the Asia Pacific region, exploring the themes of Part One through in-depth country studies. Policy and regulations, industry trends and markets are uniquely placed in their historical, economic and political context. No other publication offers such comprehensive insights and understanding of the dynamic of these markets. And like the 1995 book, this one looks likely to stand the test of time.

This open access book focuses on Switzerland-based medium-sized companies with a longstanding export tradition and a proven dominance in global niche markets. Based upon in-depth documentation and analysis of 36 Swiss companies over their entire history, an expert team of authors presents several parallels in the pathways and success factors which allowed these firms to become dominant and operate from a high-cost location such as Switzerland. The book enhances these insights by providing detailed company profiles documenting the company history, development, and how their relevant global niche positions were reached. Readers will benefit from these profiles as they compile a diverse selection of industries, mainly active within the B2B sector, with mostly mature companies (60 years to older than 100 years since founding) and different types of ownership structures including family firms. 'Masterpieces of Swiss Entrepreneurship' brings unique learning opportunities to owners and leaders of SMEs in Switzerland and elsewhere. Findings are based on detailed bottom-up research of 36 companies – without any preconceived notions. The book is both conceptual and practical. It fosters understanding for different choices in development pathways and management practices. Matti Alahuhta, Chairman DevCo Partners, ex-CEO Kone, Board member of several global listed companies, Helsinki, Finland Start-up entrepreneurs need proven models from industry which demonstrate the various paths to success. "Masterpieces of Swiss Entrepreneurship" provides deep insights highlighting these models and the important trade-offs entrepreneurial teams must consider when choosing the path of high growth or of maximum control, as they are often mutually exclusive. Gina Domanig, Managing Partner, Emerald Technology Ventures, Zurich Most strokes are attributed to atherosclerosis of neck and intracranial arteries, brain embolism from the heart, and penetrating artery disease; these are discussed in detail in many other books. This compendium fills an important niche by providing authoritative discussions on the other, less common causes of stroke, including various forms of angiiitis, coagulation disorders, infective, paraneoplastic and metabolic disorders that may be associated with stroke, and a number of rare syndromes such as Eales disease and Fabry’s disease. This new edition contains detailed, up-to-date information about the nature, diagnosis, and treatment of those relatively uncommon types of cerebrovascular disease that cause strokes. It is therefore a unique scientific and clinical resource that provides a useful reference to help physicians diagnose and treat stroke patients who do not fit well into the usual clinical categories. New chapters include stroke in patients with Lyme disease, scleroderma, Cogan’s syndrome, Chagas’s disease, and HIV.

Was Jesus a Nazi? During the Third Reich, German Protestant theologians, motivated by racism and tapping into traditional Christian anti-Semitism, redefined Jesus as an Aryan and Christianity as a religion at war with Judaism. In 1939, these theologians established the Institute for the Study and Eradication of Jewish Influence on German Religious Life. In The Aryan Jesus, Susannah Heschel shows that during the Third Reich, the Institute became the most important propaganda organ of German Protestantism, exerting a widespread influence and producing a nazified Christianity that placed anti-Semitism at its theological center. Based on years of archival research, The Aryan Jesus examines the membership and activities of this controversial theological organization. With headquarters in Eisenach, the Institute sponsored propaganda conferences throughout the Nazi Reich and published books defaming Judaism, including a dejuaded version of the New Testament and a catechism proclaiming Jesus as the savior of the Aryans. Institute members--professors of theology, bishops, and pastors--viewed their efforts as a vital support for Hitler’s war against the Jews. Heschel looks in particular at Walter Grundmann, the Institute’s director and a professor of the New Testament at the University of Jena. Grundmann and his colleagues formed a community of like-minded Nazi Christians who remained active and continued to support each other in Germany’s postwar years. The Aryan Jesus raises vital questions about Christianity’s recent past and the ambivalent place of Judaism in Christian thought.

Doctoral Thesis / Dissertation from the year 2011 in the subject Economics - Macro-economics, general, European Business School - International University Schloss Reichartshausen Oestrich-Winkel (Department of Governance and Economics), language: English, abstract: This thesis strives to offer new insights in two main areas. First, it investigates the fact that merchant usage fees for payment card services differ substantially among merchant sectors. Second, it identifies the smart (electricity) meter market as a multi-sided market and applies the insights found in the literature to better regulate a market-driven rollout of smart meters. Chapter 2 examines the determination of the merchant usage fee of a monopolistic unitary payment card network based on the characteristics of the downstream market. Merchants engage in Bertrand competition that allows for an observation of heterogeneous products. My coauthor and I find that the payment card network extracts a part of the economic rent that merchants obtain. The rent, and consequently the merchant usage fee, is increasing in the downstream market size, but decreasing in the price elasticity of consumer demand, as well as in the substitutability of products, and in the fraction of consumers who prefer card payments. Chapter 3 undertakes a similar analysis for Cournot competition among merchants. The merchant usage fee is decreasing in terms of the price elasticity of demand and has an inverse V relationship with regard to the fraction of card users. At first, increasing the fraction of cardholders makes accepting cards more attractive for merchants because of the increased sales. At some point, however, the higher costs of handling card transactions outweighs the benefit of increased revenue. Further, card companies can increase profits by influencing consumers to use their cards in sectors with a low price elasticity of demand where they can then tax a merchant’s profits more heavily. Chapter 4 looks at smart mete"

This congress proceedings provides recent research on leading-edge manufacturing processes. The aim of this scientific congress is to work out diverse individual solutions of "production at the leading edge of technology" and transferable methodological approaches. In addition, guest speakers with different backgrounds will give the congress participants food for thoughts, interpretations, views and suggestions. The manufacturing industry is currently undergoing a profound structural change, which on the one hand produces innovative solutions through the use of high-performance communication and information technology, and on the other hand is driven by new requirements for goods, especially in the mobility and energy sector. With the social discourse on how we should live and act primarily according to guidelines of sustainability, structural change is gaining increasing dynamic. It is essential to translate politically specified sustainability goals into socially accepted and marketable technical solutions. Production research is meeting this challenge and will make important contributions and provide innovative solutions from different perspectives.

This book provides an up-to-date, coherent and comprehensive treatment of digital scholarly editing, organized according to the typical timeline and workflow of the preparation of an edition: from the choice of the object to edit, the editorial work, post-production and publication, the use of the published edition, to long-term issues and the ultimate significance of the published work. The author also examines from a theoretical and methodological point of view the issues and problems that emerge during these stages with the application of computational techniques and methods. Building on previous publications on the topic, the book discusses the most significant developments in digital textual scholarship, claiming that the alterations in traditional editorial practices necessitated by the use of computers impose radical changes in the way we think and manage texts, documents, editions and the public. It is of interest not only to scholarly editors, but to all involved in publishing and readership in a digital environment in the humanities.

When you think about how far and fast computer science has progressed in recent years, it’s not hard to conclude that a seven-year old handbook may fall a little short of the kind of reference today’s computer scientists, software engineers, and IT professionals need. Andy Kirkpatrick and and Zhichang Xu offer a response to the argument that Chinese students’ academic writing in English is influenced by “culturally nuanced rhetorical baggage that is uniquely Chinese and hard to eradicate.” Noting that this argument draws from “an essentially monolingual and Anglo-centric view of writing,” they point out that the rapid growth in the use of English worldwide calls for “a radical reassessment of what English is in today’s world.” The result is a book that provides teachers of writing, and in particular those involved in the teaching of English academic writing to Chinese students, an introduction to key stages in the development of Chinese rhetoric, a wide-ranging field with a history of several thousand years. Understanding this important rhetorical tradition provides a strong foundation for assessing and responding to the writing of this growing group of students.

How does technology impact research practices in the humanities? How does digitisation shape scholarly identity? How do we negotiate trust in the digital realm? What is scholarship, what forms can it take, and how does it acquire authority? This diverse set of essays demonstrate the importance of asking such questions, bringing together established and emerging scholars from a variety of disciplines, at a time when data is increasingly being incorporated as an input and output in humanities sources and publications. Major themes addressed include the changing nature of scholarly publishing in a digital age, the different kinds of ‘gate-keepers’ for scholarship, and the difficulties of effectively assessing the impact of digital resources. The essays bring theoretical and practical perspectives into conversation, offering readers not only comprehensive examinations of past and present discourse on digital scholarship, but tightly-focused case studies. This timely volume illuminates the different forces underlying the shifting practices in humanities research today, with special focus on how humanists take ownership of, and are empowered by, technology in unexpected ways. Digital Technology and the Practices of Humanities Research is essential reading for scholars, students, and general readers interested in the changing culture of research practices in the humanities, and in the future of the digital humanities on the whole.

Clemens August Graf von Galen, Bishop of Münster from 1933 until his death in 1946, is renowned for his opposition to Nazism, most notably for his public preaching in 1941 against Hitler’s euthanasia project to rid the country of sick, elderly, mentally retarded, and disabled Germans. This provocative and revisionist biographical study of von Galen views him from a different perspective: as a complex figure who moved between dissent and complicity during the Nazi regime, opposing certain elements of National Socialism while choosing to remain silent on issues concerning discrimination, deportation, and the murder of Jews. Beth Griech-Poelle places von Galen in the context of his times, describing how the Catholic Church reacted to various Nazi policies, how the anti-Catholic legislation of the Kulturkampf shaped the repertoire of resistance tactics of northwestern German Catholics, and how theological interpretations were used to justify resistance and/or collaboration. She discloses the reasons for von Galen’s public denunciation of the euthanasia project and the ramifications of his openly defiant stance. She reveals how the bishop portrayed Jews and what that depiction meant for Jews living in Nazi Germany. Finally she investigates the creation of the image of von Galen as “Grand Churchman-Resistor” and discusses the implications of this for the myth of Catholic conservative “resistance” constructed in post-1945 Germany.

This open access book addresses the various disciplinary aspects of nature-based solutions in flood risk management on private land. In recent decades, water management has been moving towards nature-based solutions. These are assumed to be much more multi-purpose than traditional “grey infrastructures” and seem to be regarded as a panacea for many environmental issues. At the same time, such measures require more – and mostly privately owned – land and more diverse stakeholder involvement than traditional (grey) engineering approaches. They also present challenges related to different disciplines. Nature-based solutions for flood risk management not only require technical expertise, but also call for interdisciplinary insights from land-use planning, economics, property rights, sociology, landscape planning, ecology, hydrology, agriculture and other disciplines to address the challenges of implementing them. Ultimately, nature-based flood risk management is a multi-disciplinary endeavor. Featuring numerous case studies of nature-based flood risk management accompanied by commentaries, this book presents brief academic reflections from two different disciplinary perspectives that critically highlight which specific aspects are of significance, and as such, underscore the multi-disciplinary nature of the challenges faced.

Conventional theories of capitalism are mired in a deep crisis: after centuries of debate, they are still unable to tell us what capital is. Liberals and Marxists both think of capital as an ‘economic’ entity that they count in universal units of ‘utils’ or ‘abstract labour’, respectively. But these units are totally fictitious. Nobody has ever been able to observe or measure them, and for a good reason: they don’t exist. Since liberalism and Marxism depend on these non-existing units, their theories hang in suspension. They cannot explain the process that matters most – the accumulation of capital. This book offers a radical alternative. According to the authors, capital is not a narrow economic entity, but a symbolic quantification of power. It has little to do with utility or abstract labour, and it extends far beyond machines and production lines.

Capital, the authors claim, represents the organized power of dominant capital groups to reshape – or creorder – their society. Written in simple language, accessible to lay readers and experts alike, the book develops a novel political economy. It takes the reader through the history, assumptions and limitations of mainstream economics and its associated theories of politics. It examines the evolution of Marxist thinking on accumulation and the state. And it articulates an innovative theory of ‘capital as power’ and a new history of the ‘capitalist mode of power’. This book addresses the application of computing to cultural heritage and the discipline of Digital Humanities that formed around it. Digital Humanities research is transforming how the Human record can be transmitted, shaped, understood, questioned and imagined and it has been ongoing for more than 70 years. However, we have no comprehensive histories of its research trajectory or its disciplinary development. The authors make a first contribution towards remedying this by uncovering, documenting, and analysing a number of the social, intellectual and creative processes that helped to shape this research from the 1950s until the present day. By taking an oral history approach, this book explores questions like, among others, researchers’ earliest memories of encountering computers and the factors that subsequently prompted them to use the computer in Humanities research. Computation and the Humanities will be an essential read for cultural and computing historians, digital humanists and those interested in developments like the digitisation of cultural heritage and artefacts. The momentum of the British industrial revolution arose mostly in regions poorly endowed by nature, badly located and considered backward and poor by contemporaries. Sidney Pollard examines the initially surprising contribution made by the population of these and other 'marginal areas' (mountains, forests and marshes) to the economic development of Europe since the Middle Ages. He provides case studies of periods in which marginal areas took the lead in economic development, such as the Dutch economy in its Golden Age, and in the British industrial revolution. The traditional perception of the populations inhabiting these regions was that they were poor, backward, and intellectually inferior; but Sidney Pollard shows how they also had certain peculiar qualities which predisposed them to initiate progress. Healthy living, freedom, a martial spirit, and the hardness to survive in harsh conditions enabled them to contribute a unique pioneering ability to pivotal economic periods; illustrating some of the effects of geography upon the development of societies.

This invaluable textbook presents a comprehensive introduction to modern competitive programming. The text highlights how competitive programming has proven to be an excellent way to learn algorithms, by encouraging the design of algorithms that actually work, stimulating the improvement of programming and debugging skills, and reinforcing the type of thinking required to solve problems in a competitive setting. The book contains many “folklore” algorithm design tricks that are known by experienced competitive programmers, yet which have previously only been formally discussed in online forums and blog posts. Topics and features: reviews the features of the C++ programming language, and describes how to create efficient algorithms that can quickly process large data sets; discusses sorting algorithms and binary search, and examines a selection of data structures of the C++ standard library; introduces the algorithm design technique of dynamic programming, and investigates elementary graph algorithms; covers such advanced algorithm design topics as bit-parallelism and amortized analysis, and presents a focus on efficiently processing array range queries; surveys specialized algorithms for trees, and discusses the mathematical topics that are relevant in competitive programming; examines advanced graph techniques, geometric algorithms, and string techniques; describes a selection of more advanced topics, including square root algorithms and dynamic programming optimization. This easy-to-follow guide is an ideal reference for all students wishing to learn algorithms, and practice for programming contests. Knowledge of the basics of programming is assumed, but previous background in algorithm design or programming contests is not necessary. Due to the broad range of topics covered at various

levels of difficulty, this book is suitable for both beginners and more experienced readers.

In this broad-reaching, multi-disciplinary collection, leading scholars investigate how the digital medium has altered the way we read and write text. In doing so, it challenges the very notion of scholarship as it has traditionally been imagined. Incorporating scientific, socio-historical, materialist and theoretical approaches, this rich body of work explores topics ranging from how computers have affected our relationship to language, whether the book has become an obsolete object, the nature of online journalism, and the psychology of authorship. The essays offer a significant contribution to the growing debate on how digitization is shaping our collective identity, for better or worse. Text and Genre in Reconstruction will appeal to scholars in both the humanities and sciences and provides essential reading for anyone interested in the changing relationship between reader and text in the digital age.

This dictionary provides a valency description of English verbs, nouns and adjectives. Each entry contains a comprehensive list of the complementation patterns identified on the basis of the largest corpus of English available at the present time. All examples are taken directly from the COBUILD/Birmingham corpus. The valency description comprises statements about the quantitative valency of the lexical units established, an inventory of their obligatory, contextually optional and purely optional complements as well as systematic information on the semantic and collocational properties of the complements. An outline of the model of valency theory used in this dictionary is provided in the introduction.

The purpose of the book is twofold. First it tries to give a descriptive account of subjects in English. The second aim is to elucidate the status of the subject both as a concept in grammatical theory and with regard to the question whether the subject is determined by item-specific arbitrary formal restrictions in the same way as postverbal complements of the verb have been shown to be.

From extensive research, including a remarkable interview with the unrepentant chief of Hitler ' s Women ' s Bureau, this book traces the roles played by women – as followers, victims and resisters – in the rise of Nazism. Originally publishing in 1987, it is an important contribution to the understanding of women ' s status, culpability, resistance and victimisation at all levels of German society, and a record of astonishing ironies and paradoxical morality, of compromise and courage, of submission and survival.

<http://dx.doi.org/10.12946/gplh6http://www.epubli.de/shop/buch/53894>"The spatiotemporal conjunction is a fundamental aspect of the juridical reflection on the historicity of law. Despite the fact that it seems to represent an issue directly connected with the question of where legal history is heading today, it still has not been the object of a focused inquiry. Against this background, the book ' s proposal consists in rethinking key confluences related to this problem in order to provide coordinates for a collective understanding and dialogue. The aim of this volume, however, is not to offer abstract methodological considerations, but rather to rely both on concrete studies, out of which a reflection on this conjunction emerges, as well as on the reconstruction of certain research lines featuring a spatiotemporal component. This analytical approach makes a contribution by providing some suggestions for the employment of space and time as coordinates for legal history. Indeed, contrary to those historiographical attitudes reflecting a monistic conception of space and time (as well as a Eurocentric approach), the book emphasises the need for a delocalized global perspective. In general terms, the essays collected in this book intend to take into account the multiplicity of the spatiotemporal confines, the flexibility of those instruments that serve to create chronologies and scenarios, as well as certain processes of adaptation of law to different times and into different spaces. The spatiotemporal dynamism enables historians not only to detect new perspectives and dimensions in foregone themes, but also to achieve new and compelling interpretations of legal history. As far as the relationship between space and law is concerned, the book analyses experiences in which space operates as a determining factor of law, e.g. in terms of a field of action for law. Moreover, it outlines the attempted scales of spatiality in order to develop legal historical research. With reference to the connection between time and law, the volume sketches the possibility of considering the factor of time, not just as a descriptive tool, but as an ascriptive moment (quasi an inner feature) of a legal problem, thus making it possible to appreciate the synchronic aspects of the ' juridical experience ' . As a whole, the volume aims to present spatiotemporality as a challenge for legal history. Indeed, reassessing the value of the spatiotemporal coordinates for legal history implies thinking through both the thematic and methodological boundaries of the discipline."

Achieving true change and innovation depends on our ability to re-imagine and re-author the futures we want our organizations to have – and to open new perspectives and new ways of thinking, being and doing in the process. Narrative approaches and storytelling are powerful tools that can help us create a new future for branding and marketing, change, leadership, organizational learning and development. Gathering contributions by scholars and practitioners from various disciplines, this book provides a unique overview of an emerging field of practice in organizations and communities. Rooted in a narrative conceptual framework, the respective papers describe a broad range of trans-disciplinary applications, tools and methods for effectively working with stories.

Risk measures play a vital role in many subfields of economics and finance. It has been proposed that risk measures could be analysed in relation to the performance of variables extracted from empirical real-world data.

For example, risk measures may help inform effective monetary and fiscal policies and, therefore, the further development of pricing models for financial assets such as equities, bonds, currencies, and derivative securities.A Special Issue of "Risk Measures with Applications in Finance and Economics" will be devoted to advancements in the mathematical and statistical development of risk measures with applications in finance and economics. This Special Issue will bring together the theory, practice and real-world applications of risk measures. This book is a collection of papers published in the Special Issue of "Risk Measures with Applications in Finance and Economics" for Sustainability in 2018.

Rainer Werner Fassbinder is one of the most prominent and important authors of post-war European cinema. Thomas Elsaesser is the first to write a thoroughly analytical study of his work. He stresses the importance of a closer understanding of Fassbinder's career through a re-reading of his films as textual entities. Approaching the work from different thematic and analytical perspectives, Elsaesser offers both an overview and a number of detailed readings of crucial films, while also providing a European context for Fassbinder's own coming to terms with fascism.

During its long history as the French colonial city par excellence, Algiers was the site of recurrent conflicts between colonizer and colonized. Through architecture and urban forms confrontations were crystallized, cultural identities were defined, and social engineering programs were shaped and challenged. In this pathbreaking book, Zeynep elik reads the city of Algiers as the site of social, political, and cultural conflicts during the 132 years of French occupation and argues that architecture and urban forms are integral components of the colonial discourse. Algiers' city planning, based on what elik calls "the trial-and-error" model of French colonial urbanism, included the fragmentation of the casbah, ambitious Beaux Arts schemes to create European forms of housing, master plans inspired by high modernism, and comprehensive regional plans. Eventually a dramatic housing shortage led all planning efforts to be centered on the construction of large-scale residential enclaves. French architects based their designs for domestic space on the concept of the "traditional house," itself an interdisciplinary colonial concept intertwined with the discourse on Algerian women. Housing also offered the French colonizers a powerful presence in a country where periodic resistance to the occupation eventually culminated in a seven-year war of liberation and an end to French rule. Extensively illustrated with photographs, maps, and housing plans, elik's book presents a fascinating example of colonial urban planning. Algiers comes alive as a city that reflected all the conflicts of colonialism while embracing innovation. This technically oriented book on medicine as applied to extreme sports offers broad coverage of the field extending well beyond the usual focus on major trauma and acute injuries. In addition to the injuries and diseases associated with individual extreme sports, this book also addresses the topics of psychology, dermatology, ophthalmology, infectious diseases, physiology, nutrition, training, injury prevention strategies, rehabilitation, doping, treatment in hostile environments, and legal aspects. Innovative and less frequently considered topics are also discussed, such as recent advances in protective equipment and materials, the effects of exposure on whole-body vibration, and cold exposure risk management. More than 60 of the most authoritative experts from across the world have contributed to this book, drawing on their personal experiences and including practical examples whenever relevant. Both subject matter and illustrations have been selected with the utmost care, the latter including photographs of world-class athletes.The book ' s multidisciplinary approach to the subject ensures that it will be relevant to a wide readership.

The Initial Public Offering (IPO) marks one of the most important events of a company. Basically, the aim is to generate maximum proceeds by selling the company ' s shares to investors. However, the shares that are sold seem to be underpriced as the price significantly soars on the first trading day. Since the very first detection of this phenomenon in the United States in 1969, several subsequent studies have documented the existence of worldwide IPO underpricing. This study focuses on IPO Underpricing in the European and United States Stock Markets by outlining and discussing the following essential issues: What is underpricing in the context of the IPO? Which motivations are there and how do they impact? Is there IPO underpricing in the markets of Europe and the United States of America?
