This book reflects and expands on the current trend in the building industry to understand, simulate and ultimately design buildings by taking into consideration the interlinked elements and forces that act on them. Shifting away from the traditional focus, which was exclusively on building tasks, this approach presents new challenges in all areas of the industry, from material and structural to the urban scale. The book presents contributions including research papers and case studies, providing a comprehensive overview of the field as well as perspectives from related disciplines, such as computer science. The chapter authors were invited speakers at the 7th Symposium "Impact: Design With All Senses", which took place at the University of the Arts in Berlin in September 2019.

(Schott). What is a "good" tone in flute playing? Surely it must be more than just "clean" (ie not producing many unwanted sounds), "colourful" (with

adequate timbre), "flexible" (able to produce dynamic adjustments) or just a really big tone. The well-known Swiss flautist P.-L. Graf is concerned that the production of tone should not be seen as an aesthetic end in itself, but chiefly as a living means of expression and as a "musical" event. In this practice volume he has picked 3x7 examples from the flute and operatic repertoire in order to work through three sets of themes: 1.) cantabile playing at a piano dynamic, 2.) dynamic flexibility and variation of tone colour, 3.) fullness and intensity of sound. This offers concentrated training for all flautists, from student through to professional player. Text in German, French and English
