Need more standards support in your lesson plans? Finish Line New York ELA is the perfect fit with step-by-step instruction to help students take on the challenging nature of New York's Common Core Learning Standards (CCLS). This next generation of Finish Line includes 300+ pages of focused practice and a new lesson format. The gradual release model is extended to four parts to promote deeper learning: Skill Introduction, Focused Instruction, Guided Practice, and Independent Practice. Guided questions model the thought process. Language Arts/Writing is integrated into the book. A full unit of writing standards helps students practice the writing process, learn how to answer open-ended questions, and apply grammar and usage conventions. Much like New York's standards and assessments, students are required to do close reading of rigorous text. Reviews include PARCC-type items, as well as multiple-choice, open-ended, and multipart questions. Finish Line is designed to supplement core basal programs, including ReadyGEN(tm) and Common Core Code X(tm).

This textbook provides a comprehensive account of psychology for all those with little or no previous knowledge of the subject. It covers the main areas of psychology, including social psychology, developmental psychology, cognitive psychology, personality, intelligence, and biological psychology.; Each chapter contains definitions of key terms, together with several multiple-choice questions and answers, and semi- structured essay questions. In addition, every chapter contains a "Personal Viewpoint" section, which encourages the reader to compare his or her views on psychology with the relevant findings of psychologists. The last chapter is devoted to study skills, and provides numerous practical hints for readers who want to study more effectively.

Howard Zinn on Democratic Education

Database Design and Implementation

A young adult vampire horror series created by L.J. Smith. The story centers on Elena Gilbert, a young high school girl who finds herself eventually torn between two vampire brothers, Stefan and Damon Salvatore.

Cecelia looks like a peasant girl and lives in a village so small that it's not even on the map. But she knows that secretly, she is the true princess, hidden away as a baby to be kept safe from the enemies of the kingdon. A commoner named Desmia was placed on the throne as a decoy. Cecelia has always known that when it was safe, she would be taken out of hiding and returned to her rightful place on the throne. Then danger finds her in her village, and Cecelia has to act. With the help of her best friend Harper, she decides to take matters into her own hands, relieve Desmia of the the crown, and take up her own rule. But when they venture from their small village to the capital city and into the famed Palace of Mirrors, Harper and Cecelia discover that all is not as it seems, and that they have placed themselves in more danger than ever before.

Perhaps no other historian has had a more profound and revolutionary impact on American education than Howard Zinn. This is the first book devoted to his views on education and its role in a democratic society. Howard Zinn on Democratic Education describes what is missing from school textbooks and in classrooms-and how we move beyond these deficiencies to improve student education. insufficiently developed in schools, according to Zinn. Textbooks and curricula must be changed to transcend the recitation of received wisdom too common today in schools. In these respects, recent Bush Administration and educational policies of most previous US presidents have been on the wrong track in meeting educational needs. This book seeks to redefine national goals at a time when never been more polarised--nor higher in public visibility and contentious debate. Zinn's essays on education-many never before published--are framed in this book by a dialogue between Zinn and Donaldo Macedo, a distinguished critic of literacy and schooling, whose books with Paulo Freire, Noam Chomsky and other authors have received international acclaim.

Spinal Instrumentation

Bad Day for Ballet

Advanced Electrical Technology

An intensely satisfying novel that celebrates the short richly lived life of Australian artist, Clarice Beckett. Co-winner of the 2009 Australian/Vogel Literary Award.

Better understanding of biomechanics, improvements in technology, and new knowledge of the disease process in the spine have led to rapid advances in spinal instrumentation. This book is your complete guide to all contemporary forms of spinal implant systems. It not only highlights the newest devices, but also gives you the clinical guidelines you need to choose and apply the best implant for any surgical situation. Along with an all-inclusive list of the spinal instruments available today, the book offers direct comparisons of each system to help you make an informed and confident selection. You will also find valuable tips on insertion techniques and complication avoidance to maximize success in the operating room. And, thousands of exquisite graphics ensure a lucid understanding of all implants and their applications. Here is your single authoritative source for upgrading your knowledge and skill set in current implant systems. No spine surgeon, orthopedic surgeon, neurosurgeon, or resident should be without this encyclopedic volume.

Bestselling author Steve Farrar has good news for the average man: it doesn't matter if you've had a great start in the Christian life, or a rough one. It doesn't matter if you've stumbled time and again, or even fallen flat on your face. What matters most in this all-important race of life is how you finish. According to Farrar, the man who hangs in there for the long haul with his wife, his kids, and his Lord is an exception these days. Finishing Strong, now in trade paperback, offers lively use of Scripture, contemporary illustrations, and study questions to equip every reader to be that exception. For the man who wants to climb the character ladder more than the corporate one, this is an essential tool.

This third edition of Basic Electrical Engineering provides a lucid exposition of the principles of electrical engineering. The book provides an exhaustive coverage of topics such as network theory and analysis, magnetic circuits and energy conversion, ac and dc machines, basic analogue instruments, and power systems. The book also gives an introduction to illumination concepts.

This textbook examines database systems from the viewpoint of a software developer. This perspective makes it possible to investigate why database systems are the way they are. It is of course important to be able to write queries, but it is equally important to know how they are processed. We e.g. don't want to just use JDBC; we also want to know why the API contains the classes and methods that it does. We need a sense of how hard is it to write a disk cache or logging facility. And what exactly is a database driver, anyway? The first two chapters provide a brief overview of database systems and their use. Chapter 1 discusses the purpose and features of a database system and introduces the Derby and SimpleDB systems. Chapter 2 explains how to write a database application using Java. It presents the basics of JDBC, which is the fundamental API for Java programs that interact with a database. In turn, Chapters 3–11 examine the internals of a typical database engine. Each chapter covers a different database component, starting with the lowest level of abstraction (the disk and file manager) and ending with the highest (the JDBC client interface); further, the respective chapter explains the main issues concerning the component, and considers possible design decisions. As a result, the reader can see exactly what services each component provides and how it interacts with the other components in the system. By the end of this part, s/he will have witnessed the gradual development of a simple but completely functional system. The remaining four chapters then focus on efficient query processing, and focus on the sophisticated techniques and algorithms that can replace the simple design choices described earlier. Topics include indexing, sorting, intelligent buffer usage, and query optimization. This text is intended for upper-level undergraduate or beginning graduate courses in Computer Science. It assumes that the reader is comfortable with basic Java programming; advanced Java concepts (such as RMI and JDBC) are fully explained in the text. The respective chapters are complemented by "end-of-chapter readings" that discuss interesting ideas and research directions that went unmentioned in the text, and provide references to relevant web pages, research articles, reference manuals, and books. Conceptual and programming exercises are also included at the end of each chapter. Students can apply their conceptual knowledge by examining the SimpleDB (a simple but fully functional database system created by the author and provided online) code and modifying it.

From the same author as the popular first edition, the second edition of this trusted, accessible textbook is now accessible online, anytime, anywhere on Kerboodle. It breaks down content into manageable chunks to help students with the transition from GCSE to A Level study, and has been fully revised and updated for the new A Level specifications for first teaching September 2015. This online textbook provides plenty of examples and practice questions for consolidation of learning, with 'Biology at Work', 'Key Skills in Biology' and 'Study Skills' sections giving many applications of biology throughout. Suitable for AQA, OCR, WJEC and Edexcel.
