I was a student for more than 20 years, and I have taught hundreds of students since I became a tutor and then a lecturer. Throughout my study and teaching, I have witnessed that many of my classmates or students failed their exams. Some of them may have used time-consuming methods and have not completed all the questions, some of them may have had no idea about using appropriate formulae, or some of them may have skipped essential

steps and just given the final results. All these behaviours result in losing marks. With these points in mind, using proper and efficient methods and giving correct and complete responses to questions play a significant role in sitting for the test. As a student, it is very important to analyse what the examiners are testing you in their places. For example, a question worth four marks may be broken down as one mark for showing appropriate method or formula, one mark for

substituting the corresponding values into the formula, one mark for working and one mark for finding correct value at the end. In this case, to obtain full marks at least four steps are necessary, and one or two more steps are recommended to improve the chance of obtaining full marks. In this book, I summarise all the knowledge required for standard level mathematics for IB diploma. Some words are written in colour or bold to draw your attention where I think it is important or confusing.

In 1983 the seminal report issued by the National Commission on Excellence in Education, "A Nation at Risk," charged that most American high schoolers were following a general course of instruction, choosing neither the college-preparatory track nor the vocational option. This pattern, the report complained, had fostered low expectations and a curricular hodge-podge of classes that failed to

prepare students for college or work. The commission called on states to implement academic requirements for all students, regardless of background, including four years of English and three years each of science, mathematics, and social studies. Students should not be sorted by their presumed future destinations, the commission reasoned, but should be offered an equal opportunity to get a high-quality education to fit them either for postsecondary education or the modern workplace. Two decades after the commission called on states to reform the high school environment and raise graduation requirements, the Brown Center on

Education Policy at the Brookings Institution convened a group of prominent scholars to explore the current state of America's high schools, focusing on new research about reforming these institutions that are so important in the lives of the nation's adolescents. The questions considered reflected the diversity of the participants and covered a variety of areas—historical, international, sociological, and practical. Data gathered by the U.S. Department of Education show students today are taking many more advanced courses in mathematics and the sciences, while at the same time test scores do not reflect the increases in enrollments in academic

courses. In addition, large score gaps remain among students from different social groups. Reform of the high schools must take into account the elementary and middle schools that prepare students and the postsecondary institutions to which students aspire. Adolescent culture and students' views about school and academic work play important roles in student achievement, as do the family and contemporary society in shaping of adolescent behavior. No matter their background, all participants agreed that the key to a successful high school rests with the extent to which it recognizes and strengthens its commitment to the intellectual growth of its students.

Brillianteering is a real-life story of a teenager and her parents, coping with the do-or-die years of schooling (Grade 11 and 12). This is a story that many families may be familiar with – struggling with choices of courses, college and coaching classes, coordinating with tutors and mentors and dealing with anxiety and fear of failure, before finally succeeding and entering a great career. A moving narration about her This book is about a teenage girl who went through a tough phase, as she tried to break stereotypes and finally succeed

with , accept her weaknesses and work towards improvement. It is also about the young girl's unwavering commitment, hard work and resilience despite all odds that life threw at her. Using a few top chartbusters of 'Beatles' which the girl played to convey her mind many a time, the author, captures the emotional moments they went through in the phase and how holding hands sometimes and letting go at other times, and keeping the faith and belief in the innate abilities of the Girl and giving freedom of choice helped the Girl succeed. The author also speaks as to how the education
