We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Advance Praise for The Rescue "Steven Trent Smith grapples boldly with several big subjects: the Japanese occupation of the Philippines; the capture of Japan's 'Z Plan' (the decisive-battle strategy for destroying the U.S. Pacific Fleet); the rescue by submarine of forty Americans stranded in the Philippines; the climactic Battle of the Philippine Sea. Meticulously researched and well written, The Rescue ties these elements together into an epic that is emotionally engaging from start to rousing finish."--Martin Russ, author of Breakout and The Last Parallel "Smith's thoroughly researched, detailed account of the brave American and Filipino guerrillas on Negros Island in the Philippines will do much to introduce readers to this little-known aspect of World War II in the Pacific. Operating in the most primitive conditions, suffering the deprivations of living and fighting in the wild, these guerrillas were a formidable army and did much to win the war for the Allies in World War II. And the courageous and resourceful submariners of the USS Crevalle of the Pacific Fleet went well beyond the call of duty to rescue their fellow Americans from harm's way. This is a fascinating story well told." --Elizabeth Norman, author of the award-winning We Band of Angels: The Untold Story of American Nurses Trapped on Bataan by the Japanese "The Rescue is a delightful journey with the gallant few who resisted the Japanese occupation of the Philippines and who shaped the larger events which led to victory in the Pacific. Smith's brilliant research and unique storytelling make this account a must for all who enjoy history and a grand adventure."--Peter Huchthausen, author of Hostile Waters "With a photojournalist's eye for action and detail, Steven Trent Smith's The Rescue is a remarkable achievement. The incredible mission to save forty Americans stranded in the Philippines reads more like a work of fiction. This story could easily grace the big screen of your local movie theater, with a plot filled with non-stop action, amazing twists of fate, and an incredible cast of characters, complete with a climax that's certain to get the pulse pounding. A must-read for all those interested in one of the great secret submarine operations of World War II and all action adventure fans alike!"--Richard P. Henrick, author of Crimson Tide and Nightwatch

Psychiatry today is a barren tundra, writes medical historian Edward Shorter, where drugs that don't work are used to treat diseases that don't exist. In this provocative volume, Shorter illuminates this dismal landscape, in a revealing account of why psychiatry is "losing ground" in the struggle to treat depression.Naturally, the book looks at such culprits as the pharmaceutical industry, which is not inclined to market drugs once the patent expires, leading to the endless introduction of new--but not necessarily better--drugs. But the heart of the book focuses on an unexpected villain: the FDA, the very agency charged with ensuring drug safety and effectiveness. Shorter describes how the FDA permits companies to test new products only against placebo. If you can beat sugar pills, you get your drug licensed, whether or not it is actually better than (or even as good as) current medications, thus sweeping from the shelves drugs that may be superior but have lost patent protection. The book also examines the FDA's early power struggles against the drug industry, an influence-grab that had little to do with science, and which left barbiturates, opiates, and amphetamines all underprescribed, despite the fact that under careful supervision they are better at treating depression, with fewer side effects, than the newer drugs in the Prozac family. Shorter also castigates academia, showing how two forms of depression, melancholia and nonmelancholia--"as different from each other as chalk and cheese"--became squeezed into one dubious classification, major depression, which was essentially a political artifact born of academic infighting.An astonishing and troubling look at modern psychiatry, Losing Ground is a book that is sure to spark controversy for years to come.

Aufgrund der demographischen und ökonomischen Entwicklung erlangt die Behandlung geriatrischer Patienten steigende Bedeutung. Am Beispiel der Zentralen Notfallaufnahme am Klinikum Klagenfurt wird ein Modell für eine spezifische geriatrische Notfallversorgung präsentiert, die hochbetagten multimorbiden Patienten gerecht wird. Das Buch spannt den Bogen von der hausärztlichen Akut- über die intrahospitale Notfallversorgung bis zur Pflegeheimmedizin. Im medizinischen Bereich werden Schnittstellen zwischen eindimensionaler und geriatrischer Sicht beleuchtet. Weitere erfolgreiche Projekte aus D, A und CH, in denen durch organisatorische Veränderungen eine massive Auswirkung auf Patientenströme aus Pflegeheimen gezeigt wurde, vervollständigen das Werk. Es richtet sich an Führungskräfte mit gesundheitsökonomischer Ausrichtung im Gesundheitswesen, an Pflegedienstleitungen, Mediziner (Geriater, Notfallmediziner und Hausärzte) und Studierende der Gesundheitsökonomie/-management, Pflegewissenschaft und Public Health.

'I think we're fucked' Stephen Emmott Ten Billion is a book about us. It's a book about you, your children, your parents, your friends. It's about every one of us. It's about our failure: failure as individuals, the failure of business, and the failure of our politicians. It is about an unprecedented planetary emergency. It's about the future of us.

This book seeks to offer a general interpretation and critique of both methodlogical and substantive aspects of International theory.

After fleeing their homeland, Australian refugee policies threaten to tear this young couple apart. An unforgettable story of love, hope and a quest for freedom. At seventeen, all Mojgan Shamsalipoor wanted was to be safe from physical and sexual abuse, go to school, and to eventually marry for love. In Iran, she was denied all of this. Milad Jafari was a shy teenage boy who found his voice as a musician. But the rap music he loved was illegal in his country. All Milad's father, a key maker, builder and shopkeeper, wanted was for his family to live free from the fear of arrest, imprisonment or execution. To do that they all had to flee Iran. Mojgan and Milad met in Australia. But in the months between their separate sea voyages, the Australian government changed the way asylum seekers were treated. Though Milad is recognised as a refugee and will soon become a proud Australian citizen, Mojgan has been told she cannot stay here even though the threat of imprisonment and further abuse, or worse, means she can't return to Iran. UNDER THE SAME SKY, is a powerful insight into the human face of asylum seekers and the the way history has shaped the lives of these two young people. It also shows the compassion alive in our suburbs. For Mojgan and Milad, their love keeps their hopes alive.

A doctor known for his achievements in spontaneous healing explains the function of vital energy in human health and offers advice on natural healing methods

Mit Texten von Wolf Wetzel, Marlene Streeruwitz, Moshe Zuckermann, Norman Paech, Rainer Fischbach, Birgit Sauer, Farid Hafez, Michael Meyen, Diether Dehm, Gerhard Hanloser, Joachim Hirsch, Maria Wölflingseder, Imad Mustafa, Dieter Reinisch, Karl Reitter, Thomas Wüppesahl, Christian Schubert u.a. Die Machtausübung unserer Tage basiert auf mehreren Säulen. Noch immer scheint jene Definition zu gelten, mit der Antonio Gramsci vor bald 100 Jahren den (bürgerlichen) Staat beschrieb: "Hegemonie, gepanzert mit Zwang". Die jeweiligen Regierenden erkaufen die Akzeptanz zu ihrer Politik mit materiellen Zugeständnissen – so dies ökonomisch möglich ist. Parallel dazu betreiben sie eine Herrschaftstechnik, die immer offener zutage tritt: die Erzeugung von Angst. Dies ermöglicht dem Staat stärkere Befugnisse und lenkt die Aufmerksamkeit der Menschen auf das jeweilige Drohszenario. Die vermittelten Gefahren haben reale Ausgangspunkte und reichen von Terroranschlägen bis zur Ausbreitung von Viren. Dem Liberalismus ist das Autoritäre inhärent und er nutzt Bedrohungen, um die Kontrolle des sozialen Lebens auszuweiten und die demokratische Teilhabe weiter einzuschränken. Das Motto der Maßnahmen, seien es zunehmende Überwachung, Anti-Terrorgesetzgebung, Austeritätsregime, Ausgangssperren oder Lockdowns, lautet: Es gibt keine Alternative. Medien transportieren und verstärken diese Botschaft und sorgen dafür, dass die von oben verbreitete Angst nach unten in alle gesellschaftlichen Bereiche durchsickert, sodass Menschen dazu übergehen, sich gegenseitig unter Druck zu setzen, um den politischen Vorgaben Folge zu leisten. Der Sammelband "Herrschaft der Angst" setzt sich mit historischen Beispielen und Auswirkungen dieser – im Zuge der sogenannten Corona-Krise verstärkten – Strategie auseinander. Von den Notstandsverordnungen in der BRD der 1970er-Jahre über das Beispiel der israelischen Politik der Furcht bis zur Islamophobie und den Pandemie-Verordnungen reicht der Bogen der Beiträge. Dazu werden auch kulturelle und psychologische Folgen der Herrschaft durch Angst in den Blick genommen, die wiederum in negativer Weise auf die Gesellschaft zurückwirken. Ein emanzipatorischer Aufbruch ist dringend notwendig. Dafür ist eine Kritik an der verordneten Angst unerlässlich.

The much heralded "completion" of the human genome project in the year 2000 raises urgent questions: Do we now have a map of who we are? How will we control the uses of the potentially healing but also likely destructive and highly marketable information genetics brings us? Using her own life as well as her research, Barbara Katz Rothman presents an impassioned defense for the theory that humans are not "ready made from the factory", as one recent popular book on genetics put it, but social beings who grow, mature, and learn who they are.

"The Horrors of Vaccination: Exposed and Illustrated" is the 14th book in the "History of Vaccination" series. The 25 books in the "History of Vaccination" series shed light on the history of vaccines through the eyes of doctors, scientists, and historical data. They answer the pressing question, "Are vaccines safe and effective?" The 25 books in the "History of Vaccination" series are: 1) The Poisoned Needle: Suppressed Facts About Vaccination Eleanor McBean 1957 2) A Century of Vaccination and What It Teaches William Scott Tebb, MA, MD, DPH 1898 3) Vaccination: Proved Useless and Dangerous From 45 Years of Registration Statistics Alfred R. Wallace, LLD DUBL., DCL OXON., FRS, etc. 1885 4) Vaccination: Its Fallacies and Evils Robert A. Gunn, MD 1882 5) Compulsory Vaccination: The Crime Against the School Child Chas. M. (Charles Michael) Higgins 1915 6) The Truth about Vaccination and Immunization Lily Loat, secretary of the National Anti-Vaccination League of London 1951 7) Leicester: Sanitation versus Vaccination Its Vital Statistics Compared with Those of Other Towns, the Army, Navy, Japan, and England and Wales By J.T. Biggs, J.P. 1912 8) The Vaccination Question Arthur Wollaston Hutton, MA 1895 9) Vaccination a Delusion: Its Penal Enforcement a Crime Alfred Russel Wallace, LLD DUBL., DCL OXON., FRS, etc. 1898 10) Vaccination a Curse and Menace to Personal Liberty With Statistics Showing Its Dangers and Criminality James Martin Peebles, MD, MA, PhD Tenth Edition, 1913 11) Dr. C.G.G. How the Anti-Vaccine Movement Threatens Us All

For decades, Hunter S. Thompson galvanized American journalism with his acerbic wit, radical ideas, and gonzo tactics. He continued his reign as 'the Unabomber of contemporary letters' (Time) with Hey Rube. Fear, greed, and action abound in this hilarious, thought-provoking compilation as Thompson doles out searing indictments and uproarious rants while providing brilliant commentary on politics, sex, and sports – at times all in the same column. Filled with critics' favorites, as well as never-before-published columns, Hey Rube follows Thompson through the beginning of the new century. Hey Rube gives us a look at the gonzo journalist in his most organic form – unbridled, astute, and irreverent.

Is this the strangest thing that two people have ever done in the history of the world? In this uncertain world, who can predict what brings people together? When two strangers meet by chance amidst the bustle of a crowded London train station, their lives are changed forever. Multi-award-winning British playwright Simon Stephens brings his hit Broadway play to London for the first time. Brimming with blazing theatrical life it explores the uncertain and often comical sparring match that is human connection. Having received its world premiere at the Manhattan Theatre Club, New York in 2015 Heisenberg: The Uncertainty Principle makes its UK premiere in the West End in a thrilling production starring Kenneth Cranham and Anne Marie Duff, directed by Marianne Elliot.

The book gives a comprehensive overview on the knowledge of virus infection relevant for humans and animals. For each virus family the molecular details of the virus particle and the viral replication cycle are described. In the case of virus types with relevance for human and/or animal health the data on molecular biology, genetics and virus-cell interaction are combined with those concerning, pathogenesis, epidemiology, clinics, prevention and therapy.

Human beings are inseparable from the natural world, co-evolving with all of life. In order to thrive, we need to nourish this bond. In The Healing Code of Nature, biologist Clemens G. Arvay illuminates the miraculous ways that the human body interprets the living "code" of plants, animals, and our larger natural habitat for healing and sustenance. Here is a book as inspiring as it is fascinating, offering a new vision for the future of medicine and the way we relate to our environment. Learn more about: • The new science of eco-psychosomatics: the study of the close connection between mind, body, and nature • The biophilia effect and the healing relationship between humans and trees • Epigenetics and the mounting evidence of how environmental experiences of a living being can directly affect genetic material • The role of evolutionary medicine in understanding and treating cancer • Regenerating in nature and taking a time-out from the stressors of modern living • Unleashing the healing potential of encounters with animals • Moving beyond the materialist view to reclaim nature as an unsolvable mystery

In our post-welfare society, health is increasingly viewed as a commodity and individuals are defined as 'health care consumers'. At the same time, the notion that the state should care for the health of its citizens is being replaced by an expectation that citizens should play a more active role in caring for themselves. These developments are by no means uncontentious. Consuming Health explores the diverse meanings and applications of the term 'consumer' in the field of health care and the implications for policy-making, health care delivery and experiences of health care. Contributors are well-known innovative researchers and lecturers from the Australia, the UK and Canada. Between them they cover a wide range of topics - from the medicalisation of the menopause to the participation of consumer groups in the national policy process - to create an original and thought-provoking text for students and practitioners in the field of health care.

Most people wonder at the purpose of life. Is there a mission or destiny for each of us? Reconciling the claims of science with those of religion often leaves the rational mind confused. Whether you are alive to these problems or not "The Way home" is for you. Even if you go through life without considering such matters this Book is still for you. If you are puzzled, here you will find the answers. If you are asleep to the meaning of life this Book will rouse you with a jerk for it is dynamic...it's highly revealing...it is vital. It is both unique and exhilarating. It offers an abundance of food for thought and is a tremendous challenge. It has a message too! A golden message for each one of us, young or old.

Ursula Schulz-Dornburg's The Land in Between presents the complex bond between landscape and human civilization, exploring the construction of power though the built environment and its inevitable impermanence. By looking back at areas of past historical or political importance her images highlight how conflict, destruction, time and decay transforms the landscape. Many of Schulz-Dornburg's projects derive from a relatively confined geographic location, encompassing ancient civilizations alongside areas of modern strategic importance. Historically referred to as both a gateway and a cross roads, or the "land in-between", the area was often defined not by its content but by what lies on either side, between Europe and Asia, east and west, old and new. Over a thirty-year period, Schulz-Dornburg travelled to this region, visiting Armenia, Georgia, Iran, Iraq, Saudi Arabia and Yemen. Documenting ruins of the now abandoned Ottoman railway project in Saudi Arabia, decaying Soviet era bus stops in Armenia, and temporary marsh dwellings in Mesopotamia. Most recently, in 2010, she travelled to Syria to photograph the ancient city of Palmyra. Her images now form some of the last visual documentation of the area prior to its recent destruction.

Is long-term breastfeeding nature's way or an unhealthy practice? Is it a form of sexual abuse? Do controlling mothers coerce children into continuing, or are they meeting the child's innate need? Does sustained breastfeeding impact negatively on child physical and emotional health, or does it have a positive effect? Do mothers pay a price? Does the practice affect the couple relationship? Does truncated breastfeeding leave emotional wounds, and do men especially suffer? When did early weaning become established practice in the western world? Is sustained breastfeeding a feminist issue? Drawing on child development theories, neuroscience research, archaeological and anthropological findings, Breastfeeding Older Children explores the myths and reality of this taboo practice. In survey questionnaire extracts, from 48 countries, the voices of mothers, fathers and children also speak out.

Collects the renowned psychoanalyst's lectures and writings on problematic relations between men and women known as "guerrilla war" that have been in existence for some six thousand years. Reprint.

There's a silent, dangerous war going on out there. On one side are parents, bombarded with stories about the dangers of vaccines, now wary of immunizing their sons and daughters. On the other side are doctors, scared to send kids out of their offices vulnerable to illnesses like whooping cough and measles--the diseases of their grandparents. How did anyone come to view vaccines with horror? The answer is rooted in one of the most powerful citizen activist movements in our nation's history. In Deadly Choices, infectious disease expert Paul Offit relates the shocking story of anti-vaccine America--its origins, leaders, influences, and impact. Offering strategies to keep us from returning to an era when children routinely died from infections, Deadly Choices is a vigorous and definitive rebuttal of the powerful anti-vaccine movement.

Bring your company into the digital era without compromising your core business In The Digital Transformer's Dilemma: How to Energize Your Core Business While Building Disruptive Products and Services, the authors show companies how to go digital while also advancing their core business. The book emphasizes how to strike a difficult balance between establishing a new (digital) business and re-vitalizing – and digitizing – the legacy business. The core of the book is focused on the actual implementation of the digital transformation across both businesses, providing concrete tips, tricks, tools and action plans across six key dimensions: Crafting a flexible organization Using technology as a driver Designing the necessary processes Building transformational leaders "Right-skilling" the workforce of the future Galvanizing cultural change The Digital Transformer's Dilemma is a very visual book, filled with dozens of engaging illustrations that bring the contained concepts to life on the page. Based on 100+ interviews with senior executives at leading companies (such as Nestlé, Novartis, Volkswagen, BNP Paribas, BASF and Michelin) and smaller hidden champions, numerous illuminating case studies, and the authors' own experience from working in international management consulting and years of academic experience, the book highlights the fundamental principles required for executives and businesspeople to transform legacy organizations into digitally empowered companies.

The Land in Between

Ausgehend von seiner eigenen familiären Situation geht Filmemacher David Sieveking in diesem Buch der Frage nach: Wie nützlich und wie riskant sind eigentlich Impfungen? Er berichtet von seinen Recherchen und Erfahrungen mit dem kontroversen Thema und erzählt von den Herausforderungen, ein Kind aufzuziehen und dabei als Eltern Verantwortung für einen geliebten Menschen zu tragen. Als Zaria auf die Welt kommt, begrüßen die glücklichen Eltern, Jessica und David, ihre Tochter mit liebevoller Zuwendung und sie entwickelt sich prächtig. Nach wenigen Wochen steht der erste Impftermin beim Kinderarzt an. Das kleine Mädchen soll gegen acht verschiedene Krankheiten geimpft werden: Rotaviren, Pneumokokken, Diphtherie, Hepatitis B, Hib (Haemophilus influenzae Typ b), Keuchhusten, Kinderlähmung (Poliomyelitis) und Wundstarrkrampf (Tetanus). Mutter Jessica ist aufgrund ihrer schlechten Erfahrung mit dem Impfen dagegen. Sie hat Angst vor Nebenwirkungen oder gar einem Impfschaden, während David sich viel mehr Sorgen um die drohenden Krankheiten macht, auch wenn viele gefährliche Krankheiten bei uns mittlerweile zurückgedrängt sind. Jessicas Unbehagen bringt David dazu, sich intensiv mit etwas zu beschäftigen, das für ihn nie ein Thema war: Impfen hielt er immer für so selbstverständlich wie Zähneputzen. Impfen gehört in unserer Gesellschaft zur Grundausstattung des Menschen. Von Geburt an finden sich unsere Kinder in einem engen Netzwerk von immer wiederkehrenden Impfungen, dazu gehören auch die Immunisierung gegen Masern, Mumps, Windpocken, Meningokokken und Keuchhusten. Es gilt als verantwortungslos, wenn Eltern sich dagegen sperren oder sich kritisch mit dieser Thematik auseinandersetzen. Impfen wird vom Robert-Koch-Institut und der Weltgesundheitsorganisation (WHO) zu den wichtigsten und wirksamsten präventiven Maßnahmen der Medizin gezählt. Große Erfolge der Seuchenbekämpfung werden auf Schutzimpfungen zurückgeführt und die WHO betreibt ehrgeizige globale Impfprogramme zur Ausrottung von Infektionserkrankungen. Um den Familienfrieden zu wahren beschließt er, das Problem auf professionelle Weise anzugehen: er plant seinen nächsten Dokumentarfilm über das Reizthema. Seine Recherchen zeigen bald, dass Jessicas Bauchgefühl nicht aus der Luft gegriffen ist. Die Frage "Impfen – ja oder nein? Wann und was?" ist ein Dauerbrenner für Eltern auf Spielplätzen, Partys und in den Kitas. Aber auch unter renommierten Wissenschaftlern gibt es eine kontroverse Debatte, wie David bald feststellen muss. Während die kleine Zaria wächst und gedeiht, startet David seine investigative Recherche, die ihn um die halbe Welt führt und mit Forschern, Betroffenen und Ärzten zusammenbringt. Packend und sehr unterhaltsam erzählt David Sieveking von überforderten Eltern im Dschungel der Informationen. Und eröffnet ganz nebenbei völlig neue Horizonte in der Debatte über das Impfen. Zeitgleich zum Erscheinen des Buches läuft der gleichnamige Dokumentarfilm von David Sieveking in den Kinos.

The first International Handbook of Forest Therapy defines the scientific domain of this innovative, evidence-based and timely public health approach. More than 50 authors from around the world are brought together to offer their expertise and insights about forest therapy from a variety of research perspectives. The theoretical discussion of the effects related to the biophilia hypothesis presented here is complemented by research results compiled across the last three decades in the fields of forest medicine and biochemistry from Asia. The book also highlights the latest developments with regards to forest therapy in a number of different countries, ranging from China and Australia to Germany and Austria. The handbook constitutes a major milestone in research in this field. It sets the baseline for forest therapy to be implemented worldwide as a powerful and financially prudent public health practice.

This lovely package, packed w ith ready-to-send postcards, comes w ith a linen-effect w rap-over cover, making it the perfect gift pack.

Alternative water sources are expected to play a significant role in areas suffering water shortages. In many places waste water reuse is becoming a valuable component of sustainable water management practises. Substantial and practical information is needed to safely design, implement and operate waste water reuse schemes.The project AQUAREC Integrated concepts for reuse of upgraded wastewater was funded by the Fifth Framework Programme of the European Commission. Its major aim was to investigate and develop concepts and methodologies supporting rational and knowledge-based waste water reuse strategies.This publication presents practical information on waste water reuse concepts based on actual and proved management and operational practises. A broad approach has been considered by addressing institutional, organisational, legal, economics, financial, social and environmental issues together with technological aspects.

Es gibt im ganzen Universum nur 2 Stellen wo Heilung herkommt: von GOTT oder vom Teufel. Unser korruptes Gesundheitssystem, das nur schnell die Symptome behandelt, wurde schon vor vielen Jahrhunderten in der Bibel prophezeit. Doch ganzheitliche Heilung beginnt bei der Ursache. Heilungshindernisse und der Weg zur anhaltenden Gesundheit werden praktisch erklärt. Die Kraft, mit der JESUS und Seine Jünger geheilt haben, steht uns heute noch zur Verfügung. Es ist ein sanftes Hineinwachsen in eine neue Dimension. Erfahrungsberichte runden alles ab und sollen den persönlichen Glauben stärken.

Growing Up Black in White is author Kevin Hofmann's gift to the American public seeking answers to so many questions about what it is to be raised in a racially diverse household. Born to a white mother and black father in Detroit in 1967, only weeks before the terrible race riots that brought a major city to its knees, the author was taken to a foster home and then adopted by a white minister and his wife, already the parents of three biological children. In this fascinating memoir, Hofmann reveals the difficulties and joys of being part of this family, particularly during a time and in a location where acceptance was tentative and emotions regarding race ran high and hot.--P. 4 of cover.

A London researcher was the first to assert that the combination measles-mumps-rubella vaccine known as MMR caused autism in children. Following this "discovery," a handful of parents declared that a mercury-containing preservative in several vaccines was responsible for the disease. If mercury caused autism, they reasoned, eliminating it from a child's system should treat the disorder. Consequently, a number of untested alternative therapies arose, and, most tragically, in one such treatment, a doctor injected a five-year-old autistic boy with a chemical in an effort to cleanse him of mercury, which stopped his heart instead. Children with autism have been placed on stringent diets, subjected to high-temperature saunas, bathed in magnetic clay, asked to swallow digestive enzymes and activated charcoal, and injected with various combinations of vitamins, minerals, and acids. Instead of helping, these therapies can hurt those who are most vulnerable, and particularly in the case of autism, they undermine childhood vaccination programs that have saved millions of lives. An overwhelming body of scientific evidence clearly shows that childhood vaccines are safe and does not cause autism. Yet widespread fear of vaccines on the part of parents persists. In this book, Paul A. Offit, a national expert on vaccines, challenges the modern-day false prophets who have so egregiously misled the public and exposes the opportunism of the lawyers, journalists, celebrities, and politicians who support them. Offit recounts the history of autism research and the exploitation of this tragic condition by advocates and zealots. He considers the manipulation of science in the popular media and the courtroom, and he explores why society is susceptible to the bad science and risky therapies put forward by many antivaccination activists.
