*The ultimate study package for the new PMI-ACP exam The PMI-ACP Project Management Institute Agile Certified Practitioner Exam Study Guide is an all-in-one package for comprehensive exam preparation. This up-to-date guide is fully aligned with the latest version of the exam, featuring coverage of 100 percent of the exam domains. Expanded coverage of AGILE includes the basic principles, value-driven delivery, stakeholder engagement, team performance, adaptive planning, problem detection and resolution, and continuous improvement to align with the A Guide to the Project Management Body of Knowledge (PMBOK® 6th Edition) and its increased emphasis on agile, adaptive and iterative practices. In-depth discussion merges with hands-on exercises and real-world scenarios to provide a well-rounded review of essential exam concepts, while the online learning center provides an assessment test, chapter tests, a practice exam, and study aids to help you ensure complete preparation for the big day. Master 100 percent of the exam objectives, including expanded AGILE coverage Reinforce critical concepts with hands-on practice and real-world scenarios Test your knowledge with challenging chapter review questions One year of FREE access to the Sybex online test bank featuring practice tests, flashcards, a glossary, and more Project management is one of the most in-demand skills in today's job market, making more and more employers turn to AGILE methodologies to enhance delivery and results. The PMI-ACP certification shows employers that you have demonstrated mastery of essential project management skills and a practical understanding of adaptive, iterative and agile project management practices. The ranks of qualified professionals are desperately seeking, and the PMI-ACP Project Management Institute Agile Certified Practitioner Exam Study Guide is your one-stop resource for exam success. Doing Research in Applied Linguistics: Realities, dilemmas, and solutions provides insight and guidance for those undertaking research, and shows the reader how to deal with the challenges of this research involving real people in real settings. Featuring over twenty chapters by experienced and up-and-coming researchers from around the world, this book: outlines the steps involved in solving the problem and completing a successful, and publishable, project; provides case studies of obstacles faced at each stage of research, from preliminary planning to report writing; addresses issues of validity and reliability during data collection and analysis; discusses ethical issues in research dealing with vulnerable groups including children, refugees, and students; includes examples from longitudinal studies, and both qualitative and quantitative research. Doing Research in Applied Linguistics is essential reading for students studying research methods, or for those embarking on their first research project in applied linguistics or language education.*

New Leaders created the Effective Practice Incentive Community (EPIC) initiative in 2006 to learn from educators driving achievement gains in high-need urban schools. EPIC identifies school leaders and teachers whose students are making significant achievement gains and financially rewards these educators in exchange for sharing and documenting the practices that have contributed to the gains. Since 2006, New Leaders has awarded over \$15.5 million to EPIC partner districts and charter schools and led them in a rigorous examination of their practices, culminating in the publication of video cases and practice profiles on the online EPIC Knowledge System. During the 2010-11 school year, New Leaders contracted with Rockman et al, an independent research firm, to evaluate pilots of the EPIC Leadership Development Model in one charter management organization and two urban school districts: Friendship Public Charter Schools in Washington, DC (Friendship), Memphis City Schools (MCS), and District of Columbia Public Schools (DCPS). Each pilot program featured the model's core components—in-person sessions led by highly skilled facilitators who guide participants through a curriculum built on Knowledge System content; action-planning and applied learning assignments that help participants put EPIC tools and strategies to work in their own schools; videotaping of participants' practice; and consulting calls that support learning between sessions. The pilots allowed EPIC to design and test a set of technology-enriched components, including personal practice videos and online forums and consultancies, which gave participants further opportunities to examine, share, and strengthen their leadership practices. This report summarizes the findings from the evaluation, which examined the EPIC Model's effectiveness and evolution over three iterations based on emerging local needs, and its impact on leadership practice. Evaluators collaborated with EPIC to design uniform instruments for use across sites, including session feedback forms, self-assessment surveys, and possession and site-visit interview protocols. As part of the formative study, evaluators gathered feedback from participants on the effectiveness of EPIC's core components and factors that affected implementation. Evaluation findings show that the EPIC Leadership Development Model, piloted in three very different settings, had a positive impact on leadership practice and set in motion changes related to improved teaching and learning. Participants gained new skills, strategies, and resources to strengthen their own leadership practice and the practice of their teams and teachers. In addition to valuable and often immediate opportunities to implement new practices, participants had the benefit of being able to reflect on their experiences with colleagues and program facilitators. This cycle of learning, doing, and reflecting helped participants refine skills and strategies that proved successful. By considering less well-suited strategies, they also learned more about their own skills and styles and those of their leadership teams. (Contains 26 footnotes.)

*This is a comprehensive text on the methods - dietary, anthropometric, laboratory and clinical - of assessing the nutritional status of populations and of individuals in the hospital or the community. This Second Edition incorporates recent data from national nutritional surveys in the US and Europe; the flood of new information about iron, vitamin A and iodine; the role of folate in preventing neural tube defects; the use of HPLC techniques and enzyme assays; improvements in data handling; and many other developments. A paperback edition of this book is available to readers living outside of North America and Europe. Interested parties should contact the author at: rsgibson@nutrition.earthlight.co.nz http://nutrition.earthlight.co.nz Combining and integrating cross-institutional data remains a challenge for both researchers and those involved in patient care. Patient-generated data can contribute precious information to healthcare professionals by enabling monitoring under normal life conditions and also helping patients play a more active role in their own care. This book presents the proceedings of MEDINFO 2019, the 17th World Congress on Medical and Health Informatics, held in Lyon, France, from 25 to 30 August 2019. The theme of this year's conference was "Health and Wellbeing: E-Networks for All", stressing the increasing importance of networks in healthcare on the one hand, and the patient-centered perspective on the other. Over 1100 manuscripts were submitted to the conference and, after a thorough review process by at least three reviewers and assessment by a scientific program committee member, 285 papers and 296 posters were accepted, together with 47 podium abstracts, 7 demonstrations, 45 panels, 21 workshops and 9 Tutorials. All accepted paper and poster contributions are included in these proceedings. The papers are grouped under four thematic tracks: interpreting health and biomedical data, supporting care delivery, enabling precision medicine and public health, and the human element in medical informatics. The posters are divided into the same four groups. The book presents an overview of state-of-the-art informatics projects from multiple regions of the world; it will be of interest to anyone working in the field of medical informatics.*

This edition comes with new questions presented in the 2016 May revised knowledge domains. The revision is more or less a reorganization of the existing knowledge domains (after all there has not been any new major inventions in the security industry). In the practical real world a CPP may be a security manager, an external consultant, or a law enforcement agent. For purpose of the exam, however, you want to position yourself as a hired consultant - one who acts as an advisor to the company management. The company is your client, and you are helping it out. You advise, you guide, and you recommend. You need to understand your client. If your client is absolutely new to security, full scale interviews and statistical analysis on crimes may be necessary. However, if your client has a working security mechanism in place, then you should conduct assessment basing primarily on inputs from management. In other words, management determines the depth and scope of the security project. Management makes the decisions. You suggest ways to improve, then carry out the decisions made by management. You don't normally make decisions for your client. It is safe to say that you assume the role of project manager for your client's security project. The security project would start by discussing the scope of work with your client. The most important meeting between you and the client would be the initial goal setting and policy review meeting. Senior management is going to get involved, and you are going to act as the facilitator. From this meeting you become aware of the level of risk your client is willing to assume and accept. Your work would then start from there. When working on a project it is important to understand the background and operation of the client. You also want to know what you are up against. Protection against vandalism is totally different from protection against terrorist attack. A CPP is more on the planning and management side of security. A security guard professional, on the other hand, is to provide client with professional protective services. It is believed that the CPP certification is more general in nature, while the PSP certification is way more specific and in-depth in physical security. We create these self-practice test questions referencing the concepts and principles currently valid in the exam. Each question comes with an answer and a short explanation which aids you in seeking further study information. For purpose of exam readiness drilling, this product includes questions that have varying numbers of choices. Some have 2 while some have 5 or 6. We want to make sure these questions are tough enough to really test your readiness and draw your focus to the weak areas. Think of these as challenges presented to you so to assess your comprehension of the subject matters. The goal is to reinforce learning, to validate successful transference of knowledge and to identify areas of weakness that require remediation. The questions are NOT designed to "simulate" actual exam questions. "Realistic" or actual questions that are for cheating purpose are not available in any of our products.

Building upon his earlier book that detailed agile data warehousing programming techniques for the Scrum master, Ralph's latest work illustrates the agile interpretations of the remaining software engineering disciplines: Requirements management benefits from streamlined templates that not only define projects quickly, but ensure nothing essential is overlooked. Data engineering receives two new "hyper modeling" techniques, yielding data warehouses that can be easily adapted when requirements change without having to invest in ruinously expensive data-conversion programs. Quality assurance advances with not only a stereoscopic top-down and bottom-up planning method, but also the incorporation of the latest in automated test engines. Use this step-by-step guide to deepen your own application development skills through self-study, show your teammates the world's fastest and most reliable techniques for creating business intelligence systems, or ensure that the IT department working for you is building your next decision support system the right way. Learn how to quickly define scope and architecture before programming starts Includes techniques of process and data engineering that enable iterative and incremental delivery Demonstrates how to plan and execute quality assurance plans and includes a guide to continuous integration and automated regression testing Presents program management strategies for coordinating multiple agile data mart projects so that over time an enterprise data warehouse emerges Use the provided 120-day road map to establish a robust, agile data warehousing program

Rethinking Readiness offers a new set of competencies to replace the narrow Learning goals of No Child Left Behind and, in chapters written by some of the nation's most well-respected education scholars, explores their implications for schools. Today's students must cultivate the full range of intellectual, interpersonal, and intrapersonal capacities that have been grouped together under the banner of "deeper Learning." Rethinking Readiness focuses on how educators and policy makers should move forward to provide the educational experiences that students need to become truly well prepared for college, careers, and civic life, including changes in curriculum, teacher evaluation, and student assessment. As state leaders chart a new course for K-12 education in the Every Student Succeeds Act era, Rethinking Readiness offers a succinct and compelling vision for a new agenda for school reform so future generations can prosper in a rapidly changing world.

*Diet and Nutrition in Dementia and Cognitive Decline offers researchers and clinicians a single authoritative source which outlines the complex interrelationships between cognitive decline, dementia and the way diet can be modified to improve outcomes. In a cross-disciplinary field like dementia research and practice, clinicians and researchers need a comprehensive resource which will quickly help them identify a range of nutritional components and how to use them. The focus is on clinical applications, while the book also features the evidence of how nutritional components, either in the diet or supplements, can either impede the development to, or progression from, the onset of dementia. Authors investigate how conditions and processes overlap between defined conditions and present studies which show that dietary components may be equally effective in a number of conditions characterized by declining cognition or dementia. This book represents essential reading for researchers and practicing clinicians in nutrition, dietetics, geriatrics, nursing, neurology, and psychology, as well as researchers, such as neuroscientists, molecular and cellular biochemists, interested in dementia. Explores the complex interrelationships between cognitive decline, dementia and the way diet can be modified to improve outcomes Focuses on both clinical nutrition applications and the innovative preclinical studies that serve as the foundation for rigorous trials Covers specific conditions and mechanisms in dementias, as well as general aspects, risk factors, lifestyle and guidelines for practitioners Organizes chapter content in terms of the molecular, mechanistic, epidemiologic, and practical, so that correlations can be observed across conditions*

New Leaders for New Schools created the Effective Practice Incentive Community (EPIC) initiative in 2006 to learn from educators driving achievement gains in high-need urban schools. EPIC identifies school leaders and teachers whose students are making significant achievement gains and financially rewards these educators in exchange for sharing and documenting the practices that have contributed to the gains. Since 2006, New Leaders has awarded over \$15.5 million to EPIC partner districts and charter schools and led them in a rigorous examination of their practices, culminating in the publication of video cases and practice profiles on the online EPIC Knowledge System. In 2009, New Leaders introduced the EPIC Leadership Development Model as a way to make these practices more widely available. Leveraging the rich resources of the Knowledge System, which now contains more than 200 case studies of effective practices from award-winning schools, the model offers school leaders within and beyond the EPIC consortium a job-embedded professional learning experience through which they use the examples of others to examine their own beliefs and practices and lead their own schools. From the moment you start your first year, New Leaders contracted with Rockman et al, an independent research firm, to evaluate pilots of the EPIC Leadership Development Model in one charter management organization and two urban school districts: Friendship Public Charter Schools in Washington, DC (Friendship), Memphis City Schools (MCS), and District of Columbia Public Schools (DCPS). Each pilot program featured the model's core components—in-person sessions led by highly skilled facilitators who guide participants through a curriculum built on Knowledge System content; action-planning and applied learning assignments that help participants put EPIC tools and strategies to work in their own schools; videotaping of participants' practice; and consulting calls that support learning between sessions. The pilots allowed EPIC to design and test a set of technology-enriched components, including personal practice videos and online forums and consultancies, which gave participants further opportunities to examine, share, and strengthen their leadership practices. The EPIC Model tailors session content to local needs, defined through an initial needs assessment, ongoing dialogue, and alignment with each partner's human capital management strategies. The Friendship pilot targeted principals and their work with leadership teams and focused on norming definitions of effective practice and strengthening observation and evaluation systems. In MCS, the focus was on building assistant principals' strategies and practices for leading data teams. In DCPS, EPIC worked with assistant principals on building skills to lead a team through a midyear change initiative. Both the MCL and DCPS programs were designed for assistant principals identified by the districts as having potential for principalship. This report summarizes the findings from the evaluation, which examined the EPIC Model's effectiveness and evolution over three iterations based on emerging local needs, and its impact on leadership practice. Evaluators collaborated with EPIC to design uniform instruments for use across sites, including session feedback forms, self-assessment surveys, and possession and site-visit interview protocols. As part of the formative study, evaluators gathered feedback from participants on the effectiveness of EPIC's core components and factors that affected implementation. As ongoing evaluation continues to inform the evolution of the EPIC Leadership Development Model, research shows that the combination of its use of innovative technology and rich base of leadership knowledge leads to observable and meaningful improvements in participants' leadership practices. Since Arnold Bender's classic Food processing and nutrition in 1978, there has been no single volume survey of the impact of processing on the nutritional quality of food. With its distinguished editors and international team of contributors, The nutrition handbook for food processors, fills that gap. It summarises the wealth of research in an area as important to the food industry as it is to health-conscious consumers. Part one provides the foundation for the rest of the book, looking at consumers and nutrition. After a discussion of surveys on what consumers eat, there are two reviews of research on the contribution of vitamins and minerals to health. Three further chapters discuss how nutrient intake is measured and at how nutrition information is presented to and interpreted by consumers. Part two looks at processing and nutritional quality. Two introductory chapters look at raw materials, discussing the nutritional enhancement of plant foods and meat respectively. The remaining chapters review the impact of processing, beginning with a general discussion of the stability of vitamins during processing. There are chapters on processes such as thermal processing, frying, freezing, packaging and irradiation. The book also covers newer processes such as microwave processing, ohmic heating and high pressure processing. Given the unprecedented attention on the impact of processing on the nutritional quality of food, the nutrition handbook for food processors is a standard work in its field. Summarises key findings on diet and nutrient intake, the impact of nutrients on health, and how food processing operations affect the nutritional quality of foods Examines consumers and nutrition, processing and nutritional quality, and nutritional enhancement of plant foods and meat, among other topics Reviews the wealth of recent research in an area as important to the food industry as it is to health-conscious consumers

The new edition of the Handbook of Nutrition and Food follows the format of the bestselling earlier editions, providing a reference guide for many of the issues on health and well being that are affected by nutrition. Completely revised, the third edition contains 20 new chapters, 50 percent new figures, and updates to most of the previously cited. The number one book in pediatric OT is back! Focusing on children from infancy to adolescence, Case-Smith's Occupational Therapy for Children and Adolescents, 8th Edition provides comprehensive, full-color coverage of pediatric conditions and treatment techniques in all settings. Its emphasis on application of evidence-based practice includes: eight new chapters, a focus on clinical reasoning, updated references, research notes, and explanations of the evidentiary basis for specific interventions. Coverage of new research and theories, new techniques, and current trends, with additional case studies, keeps you in-step with the latest advances in the field. Developmental milestone tables serve as a quick reference throughout the book! NEW! Eight completely new chapters cover Theory and Practice Models for Occupational Therapy With Children, Development of Occupations and Skills From Infancy Through Adolescence, Therapeutic Use of Self, Observational Assessment and Activity Analysis, Evaluation Interpretation, and Goal Writing, Documenting Outcomes, Neonatal Intensive Care Unit, and Vision Impairment. NEW! A focus on theory and principles Practice Models promote clinical reasoning. NEW! Emphasis on application of theory and frames of reference in practice appear throughout chapters in book. NEW! Developmental milestone tables serve as quick reference guides. NEW! Online materials included to help facilitate your understanding of what's covered in the text. NEW! Textbook is organized into six sections to fully describe the occupational therapy process and follow OTPF. JNCI.

Revised and updated by a new editorial team, the Sixth Edition of this text will remain the leading reference on the clinical care of the newborn. It provides complete, authoritative information on the biology of the newborn and the pathophysiology and management of diseases during the neonatal period. This edition has five new chapters on the role of telemedicine in neonatology, the impact of labor and delivery on the fetus, fetal determinants of adult disease, breast feeding, and control of breathing and apnea. Also included is a full-color insert illustrating key signs and symptoms, selected imaging techniques, and dermatologic conditions.

Now in the 6th edition, the book gives you the interview preparation you need to get the top software developer jobs. This is a deeply technical book and focuses on the software engineering skills to ace your interview. The book includes 189 programming interview questions and answers, as well as other advice.

This easy-to-use handbook is a useful resource for all health professionals engaged in processes of evaluation in a variety of contexts within the world of healthcare. Encouraging an evidence-based approach to practice, it provides: \* guidelines on how to design and evaluate an intervention \* examples of good practice \* reliable and easy-to-use measures \* advice on how to work effectively. Designed to prompt self-evaluation and group project evaluation, it illustrates how simple evaluation methods can help to break down the divisions between research and practice. It shows how more practitioners can apply such methods to improve the quality of care as well as the treatments and services which they offer their patients and clients. The examples, drawn from clinical settings, community practice and work in the voluntary sector, demonstrate the kind of evaluation that can be undertaken by a small-scale team or a single practitioner with limited resources. The Evaluation Handbook will be a useful source of reference for those new to evaluation as well as more experienced managers and researchers.
