This book is a replica of the original Handbook for the Recently Deceased as seen in the 1988 film Beetlejuice. (6x9 - Easy to Carry) The cover and the first two pages of this book have been painstakingly recreated using a genuine prop which was used for filming. The original Handbook prop was consigned directly by J.C. Bennett, who at the time was a young production assistant who worked on the film back in 1987-1988. There were several identical Handbook props made for the film, these were created using the psychology textbook "Measurements of Human Behavior by Edward B. Greene as a foundation. Aside from the cover and first couple pages, the remainder of the books were left unchanged. This book has recreated the cover and those pages. Since no actual content exists for the essence of this book, we've cleared the rest of these pages for it to be used as a journal or sketchbook should you wish.

All aboard the Alphatrain! This adorable two-in-one board book features beautifully illustrated animals for every letter of the alphabet and can be read page-by-page as a lap book or be unfolded into a 42" train! (Perfect for play time or room decor!) In addition to the animals, each whimsically designed train car includes fun objects for each letter: Bear eats a banana, Elephant listens to earphones, and Fox wears a fez (of course). As a bonus, the back of each page lists the words of each hidden object so kids can search for them on the front of the car. A handy clasp keeps everything snugly shut when reading time is over.

As a young man Francis of Assisi renounced his wealthy background, dressed in coarse robes and lived in poverty. He believed every living creature and thing on earth was sacred and deserved respect. In this spirit, he founded the Franciscan Order, which endures today. Géraldine Elschner narrates in her poetic text the life and work of Francis of Assisi, one of the most famous saints of Christianity. Glowing reproductions of Italian frescoes and quotes by Pope Francis portray his life and works.

Owing to their specialized training, engineers play a crucial role in the design and development of new products or infrastructure as well as the creation of wealth. Consequently, engineers recognize that in the performance of these functions they have a specific responsibility to take such measures as are appropriate to safeguard the environment, health, safety and well-being of the public. This book proposes a series of fifteen practical cases, integrating knowledge from different fields of the mechanical engineering discipline, along with basic knowledge in environment, occupational health and safety risk management. The cases are descriptions of a real system, it's functioning and it's instructions for use. The systems selected represent a broad spectrum of mechanical engineering issues or problems: fluid mechanics, thermodynamics, heat transfer, heating, ventilation and cooling, vibrations, dynamics, statics, failure of materials, automatic and mecatronics, hydraulics, product design, human factors, maintenance, rapid prototyping to name a few. The professional objective of the cases proposed is to design or improve the design of the described system. This book is a must to transfer knowledge to future engineers with respect to hazards resulting from their work.
