For anyone planning events—student, novice, or experienced professional—Confessions of an Event Planner is an "apprenticeship in a book." This insider's guide takes you on a narrative journey, following a fictional event planning company that stages various types of events around the world for many different clients. While other books, college courses, and training programs give you the theory and how-to of the profession, Confessions of an Event Planner reveals the real world of event planning and what can happen—usually the unexpected—on an event program when actual participants are added to the event planning design and execution mix. In a climate of media scrutiny and corporate scandals, event planners must be masters of discretion, knowing how to avoid and deal with everything from sexual romps to financial shenanigans, to chainsaw wielding salesmen dead set on "re-landscaping" the grounds of the resort they're staying at. From an event planner who's seen it all and knows how to deal with it all, comes practical first-hand advice delivered in an entertaining and accessible format. Each chapter is set in a unique location, with a cast of characters, and a host of challenges and problems to overcome—from the boardroom to the resort guest bedrooms. Readers learn what they can come up against, how to problem solve creatively on the fly, get ideas for staging spectacular events, and see the principles of event planning in action. The scenario in each chapter is introduced by an outline of what will be covered in the chapter, and each chapter concludes with a series of review questions to explore key issues and stimulate reflection or discussion for individuals or groups. Ideal as a companion to Judy Allen's six other event planning books, as a textbook in event planning courses, or as a professional training tool Confessions of an Event Planner prepares planners for what they can expect once they start working in the world of corporate and social event planning, and will help decision-makers set company policies, procedures and protocol and promote discussion about codes of conduct in the office and offsite.

Mega-events such as the Olympic Games, World Cup finals and international political summits are occasions of almost unparalleled economic, political and social significance for host nations and cities. The scale and scope of mega-event security has continued to grow enormously since 11 September 2001, consistently involving the largest policing and security operations for event hosts outside of wartime. This book is the first to focus exclusively on the organisational dynamics underpinning the design and delivery of mega-event security. Using the G20 Summit in Brisbane, Australia in November 2014 as a case study, in conjunction with comparisons with events such as the Toronto 2010 G20, the authors engage in a comprehensive assessment of the

networks, strategies and tensions involved in mega-event security. By drawing on the insightful experiences of those responsible for securing the Brisbane 2014 G20, the authors look behind-the-scenes to capture the complexity of mega-event security. The authors argue that such an approach is essential to better appreciate how different conceptions of security, ways of thinking and acting, impact a range of security ideals and outcomes.

Significant amounts of liquid and solid radioactive waste have been generated in Russia during the production of nuclear weapons, and there is an urgent need to find suitable ways to manage these wastes in a way that protects both the current population and future generations. This book contains contributions from pure and applied scientists and other representatives from Europe, North America, and Russia, who are, or have been, actively involved in the field of radioactive waste management and disposal. First-hand experience of specific problems associated with defence-related wastes in the USA and the Russian Federation is presented, and current plans are described for the disposal of solid wastes arising from civilian nuclear power production programmes in other countries, including Belgium, Bulgaria, Canada, Germany and the UK. The book provides a good insight into ongoing research at local and national level within Russia, devoted to the safe disposal of defence-related radioactive waste. It also demonstrates how existing expertise and technology from civilian nuclear waste management programmes can be applied to solving the problems created by nuclear defence programmes. Contributions address methods of immobilisation, site selection methodology, site characterisation techniques and data interpretation, the key elements of safety/performance assessments of planned deep (geological) repositories for radioactive waste, and radionuclide transport modelling. Concerns associated with certain specific nuclear waste disposal concepts and repository sites are also presented.
