Vespasian's mission will lead to violence, mayhem, and theft—and in the end, to a betrayal so great it will echo through the ages Vespasian is serving as a military officer on the outskirts of the Roman Empire, suppressing local troubles and defending the Roman way. But political events in Rome—Tiberius's increasingly insane debauchery, the escalating grain crisis—draw him back to the city. When Caligula becomes Emperor, Vespasian believes that things will improve. Instead, he watches the young emperor deteriorate from Rome's shining star to a blood-crazed public displays of his relationship with his sister, Drusilla, and a terrified senate are as nothing to Caligula's most ambitious plan: to bridge the bay of Neapolis and ride over it wearing Alexander's breastplate. And it falls to Vespasian to travel to Alexandria and steal it from Alexander's mausoleum.

Thomas Sheridan's study of the municipio of Cucurpe, Sonora, offers new insight into the ability of peasants to respond to ecological and political change. In order to survive as small rancher-farmers, the Cucurpe-os battle aridity and one another in a society characterized by sharp economic inequality and long-standing conflict over the distribution of land and water. Sheridan has written an ethnography of resource control, one that weeds the approaches of political ecology and cultural ecology in order to focus upon both the external linkages and internal acological and economic constraints which scarce and necessary resources place upon households in Cucurpe, and then investigates why many such households have formed corporate communities to insure their access to resources beyond their control. Finally, he identifies the class differences that exist within the corporate communities as well as between members of those organizations and the private ranchers who surround them. Where the Dove Calls (the meaning of "Cucurpe" in the language of the Opata Indians), an important contribution to peasant Cucurpe's corporate communities as organizations of fiercely independent domestic units rather than as expressions of communal solidarity. Sheridan shows that peasants are among the exploiters as well as the exploited. Cucurpe_os struggle to maintain the autonomy of their households even as they join together to protect corporate grazing lands and irrigation water. Any attempt to weaken or destroy that independence is met with opposition that ranges from passive resistance to violence.

A brilliant and poetic exploration of the way that we experience time in our everyday lives. Why does time seem so short? How does women’s time differ from men’s? Why does time seem to move slowly in the countryside and quickly in cities? How do different cultures around the world see time? In A Sideways Look at Time, Jay Griffiths takes readers on an extraordinary tour of time as we have never seen it before. With this dazzling and defiant work, Griffiths introduces us to dimensions of time that are largely forgotten in our modern lives. She presents an infectious argument for other, more magical times, the diverse cycles of nature, of folktae or carnival, when time is unlimited and on our side. This is a book for those who suspect that there’s more to time than clocks. Irresistible and provocative, A Sideways Look at Time could change the way we view time-forever.

**Covers the entire careers of all three in one entertaining and educational narrative. *Includes pictures of Meade, Hancock, Chamberlain, and important people, places, and events in their lives. *Includes a Bibliography of each man for further reading. Despite the fact that the Civil War began over 150 years ago, it remains one of the most widely discussed topics in America today, with Americans arguing over its causes, reenacting its famous battles, and debating which general was better than others. Americans continue to be fascinated by the Civil War icons who made the difference between victory and defeat in the war's great battles. Naturally, as the most famous and biggest battle of the Civil War, Gettysburg has been studied intensely for nearly 150 years, as every decision by the battle's generals has been dissected over and over again. With that, the men most responsible for the Union victory there have been immortalized. Ironically, one of the generals who often escapes the attention of Civil War fans who compile the lists of best generals is the man who won the war's most famous battle, George G. Meade (1815-1872). During the first half of the war, Meade rose from command of a brigade to command of a division and finally command of the entire Army of the Potomac just days before the Battle of Gettysburg. Naturally, he is best known for defeating Robert E. Lee's Army of Northern Virginia at Gettysburg in July 1863, although he's not nearly as well remembered as his Confederate counterpart. After the Battle of Chancellorsville, Winfield Scott Hancock fortuitously became the new II Corps commander in the Army of the Potomac, just in time to deliver his greatest performance of all. At Gettysburg, Hancock was the commanding general in the field on Day 1, as Meade and the rest of the Union army arrived later that night. On Day 2, Hancock's men assisted Sickles' III Corps when Sickles disobeyed orders and moved it forward, creating a gap in the Union lines. And on Day 3, Hancock's greatest day of the war, he was seriously injured and nearly bled to death while leading his men in their decisive repulse of Pickett's Charge. Chamberlain had a respectable Civil War career and life, but he had been largely forgotten in the decades after the Civil War, with the focus on more influential commanding generals and their principal subordinates. Then a remarkable thing happened with the 1974 publication of Michael Sharaa's The Killer Angels, a Pulitzer Prize winning historical fiction that focuses on the Battle of Gettysburg and its influential generals and leaders. In one fell swoop, Michael Sharaa breathed life back into the reputations of men like John Buford and Joshua Chamberlain, cast as the Union heroes of Day 1 and Day 2 respectively that made victory at Gettysburg possible. In the novel, Chamberlain's regiment holds the high ground and a series of desperate Confederate charges, and when they ran out of gunpowder, Chamberlain ordered a brave bayonet charge that drove the Confederates in their front from the fight. With that, the Union's left flank was saved. The Heroes of Gettysburg comprehensively covers the leadership of all three at Gettysburg, but it also chronicles their entire lives and careers, humanizing the stoic Chamberlain, physically intimidating Hancock, and the surly but modest Meade.*

An examination of the fierce disputes that arose in Britain in the decades around 1900 concerning patents for electrical power and telecommunications. Late nineteenth-century Britain saw an extraordinary surge in patent disputes over the new technologies of electrical power, lighting, telephony, and radio. These battles played out in the twin tribunals of the courtroom and the press. In Patently Contestable, Stathis Arapostathis and Graeme Gooday examine how Britain's patent laws and associated customs changed from the 1870s to the 1920s. They consider how patent rights came to be so widely disputed and how the identification of apparently solo heroic inventors was the contingent outcome of patent litigation. Furthermore, they point out potential parallels between the British experience of allegedly patentee-friendly legislation introduced in 1883 and a similar potentially empowering shift in American patent policy in 2011. After explaining the trajectory of an invention from laboratory to Patent Office to the court and the key role of patent agents, Arapostathis and Gooday offer four case studies of patent-centered disputes in Britain. These include the mostly unsuccessful claims against the UK alliance of Alexander Graham Bell and Thomas Edison in telephony; publicly disputed patents for technologies for the generation and distribution of electric power; challenges to Marconi's patenting of wireless telegraphy as an appropriation of public knowledge; and the emergence of patent pools to control the market in incandescent light bulbs.

This will be a substantial revision of a good selling text for upper division/first graduate courses in biomedical transport phenomena, offered in many departments of biomedical and chemical engineering. Each chapter will be updated accordingly, with new problems and examples incorporated where appropriate. A particular emphasis will be on new information related to tissue engineering and organ regeneration. A key new feature will be the inclusion of complete solutions within the body of the text, rather than in a separate solutions manual. Also, Matlab will be incorporated for the first time with this Fourth Edition.
