Donald Knuth is Professor Emeritus of the Art of Computer Programming at Stanford University, and is well-known worldwide as the creator of the Tex typesetting language. Here he presents the third volume of his guide to computer programming.

The ability to conceptualize an economic problem verbally, to formulate it as a mathematical model, and then represent the mathematics in software so that the model can be solved on a computer is a crucial skill for economists. Computational Economics contains well-known models--and some brand-new ones--designed to help students move from verbal to mathematical to computational representations in economic modeling. The authors' focus, however, is not just on solving the models, but also on developing the ability to modify them to reflect one's interest and point of view. The result is a book that enables students to be creative in developing models that are relevant to the economic problems of their times. Unlike other computational economics textbooks, this book is organized around economic topics, among them macroeconomics, microeconomics, and finance. The authors employ various software systems--including MATLAB, Mathematica, GAMS, the nonlinear programming solver in Excel, and the database systems in Access--to enable students to use the most advantageous system. The book progresses from relatively simple models to more complex ones, and includes appendices on the ins and outs of running each program. The book is intended for use by advanced undergraduates and professional economists and even, as a first exposure to computational economics, by graduate students. Organized by economic topics Progresses from simple to more complex models Includes instructions on numerous software systems Encourages customization and creativity

Automasi proses robotik (robotic process automation) (APR) merupakan salah satu teknologi yang berkembang pesat saat ini, dan sedang diimplementasikan oleh berbagai perusahaan dan institusi, termasuk di Asia. Tidak bisa dipungkiri, automasi sedang berlangsung di bisnis modern, dan akan berlangsung dengan dukungan teknologi yang semakin mutakhir. Automasi di bisnis, akuntansi dan pengauditan kini memasuki babak baru. Automasi di masa kini bersifat multiplatform dan lintas aplikasi. Automasi juga bisa dikombinasikan dengan pemelajaran mesin (machine learning) dan kecerdasan buatan (artificial intelligence). Pemanfaatan APR di bisnis, akuntansi dan pengauditan tidak berarti menjadi ancaman bagi profesi, namun memberikan peluang dan tantangan baru. Akuntan dan auditor masa kini memiliki peran yang berbeda dengan peran di masa lalu. Jika di masa lalu, akuntan dan auditor tenggelam di kerumitan pekerjaan-pekerjaan rutin sehingga hanya menyisakan sedikit waktu untuk pekerjaan analisis dan evaluasi. Kini, peran professional akuntan dan auditor semakin diperlukan. Kemampuan akuntan dan auditor di pemahaman proses bisnis menjadi semakin penting agar mereka bisa memvalidasi, menginterpretasikan, dan mengevaluasi informasi akuntansi sesuai dengan konteks, sehingga informasi bisa semakin berdaya guna bagi organisasi. Pemahaman mengenai proses bisnis, kemampuan beradaptasi dengan teknologi, dan keterampilan dalam memanfaatkan teknologi automasi merupakan nilai tambah bagi akuntan dan auditor masa kini, dan masa depan.

The book includes information on 270 species of vascular plants observed during our surveys conducted in more than 50 islands in Maldives, the common native as well as all alien plants which are currently occurring in the Islands. Information provided includes the current valid name of the plant, most popular synonyms, names in Dhivehi and a few common English names. Plant descriptions given include data on vegetative characteristics, avoiding confusing scientific terms, as far as possible. Data collected from the field are the source of information on the occurrence and distribution in different islands. Threats and damages caused by invasive alien species are also included. Ethnobotanical information collected during the study is given under uses. However, use of any plant/plant parts for medicinal purposes, based on the information provided in this book is not recommended for want of evidence on the non-toxicity of the plant/plant parts. So, the readers of the book are advised to refrain from using plant parts for medicinal purposes. It is hoped that this book will be used as a field guide for identification of native, nonnative and invasive plants in Maldives by specialists and non-specialists alike.

An enterprise architecture tries to describe and control an organisation's structure, processes, applications, systems and techniques in an integrated way. The unambiguous specification and description of components and their relationships in such an architecture requires a coherent architecture modelling language. Lankhorst and his co-authors present such an enterprise modelling language that captures the complexity of architectural domains and their relations and allows the construction of integrated enterprise architecture models. They provide architects with concrete instruments that improve their architectural practice. As this is not enough, they additionally present techniques and heuristics for communicating with all relevant stakeholders about these architectures. Since an architecture model is useful not only for providing insight into the current or future situation but can also be used to evaluate the transition from 'as-is' to 'to-be', the authors also describe analysis methods for assessing both the qualitative impact of changes to an architecture and the quantitative aspects of architectures, such as performance and cost issues. The modelling language presented has been proven in practice in many real-life case studies and has been adopted by The Open Group as an international standard. So this book is an ideal companion for enterprise IT or business architects in industry as well as for computer or management science students studying the field of enterprise architecture.

This block introduces SQL, the Structured Query Language - the standard language for data management tasks. First, it introduces you to SQL's facilities for retrieving data from a database using increasingly complex queries. Then it looks at how to use SQL to define and populate tables, define constraints on the data and modify the data held in the database. Finally, it looks at some programming structures that can be used to embed SQL in application processes. Please note that although this block is intended to be self contained, you will find many of the concepts easier to understand if you have a good knowledge of the relational theory of Block 2. Also the practical skills that are developed in this block are used in Blocks 4 and 5. This is a very practical block and requires the use of the Interactive SQL interface to the Sybase DBMS that is supplied on the Software CD (order code M359/CDR01) and database cards University data summary and Hospital data summary (order code M359/DBCARDS).

With continuous improvement (kaizen) and Total Quality Control (TQC) becoming increasingly important to world class companies, there's an urgent need to build quality into every management decision. The tools presented in this book allow you to do just that. They represent the most important advance in quality deployment and project management in recent years. Unlike the seven traditional QC tools, which measure quality problems that already exist and are used by quality circles, these seven new QC tools make it possible for managers to plan wide-ranging and detailed TQC objectives throughout the entire organization. These tools, some borrowed from other disciplines and others developed specifically for quality management, include the relations diagram, the KJ method (affinity diagram), the systematic diagram, the matrix diagram, matrix data analysis, the process decision program chart (PDPC), and the arrow diagram. Together they will help you to: Expand the scope of quality efforts company-wide. Set up and manage the systems necessary to resolve major quality problems. Anticipate potential quality problems and actually eliminate defects before they happen. Never before available in English, Management for Quality Improvement is absolutely essential reading if you are in any area of project management, quality assurance, MIS, or TQC.

Historically, grief and spirituality have been jealously guarded as uniquely human experiences. Although non-human animal grief has been acknowledged in recent times, its potency has not been recognised as equal to human grief. Anthropocentric philosophical questions still underpin both academic and popular discussions. In Enter the Animal, Teya Brooks Pribac examines what we do and don't know about grief and spirituality. She explores the growing body

of knowledge about attachment and loss and how they shape the lives of both human and non-human animals. A valuable addition to the vibrant interdisciplinary conversation about animal subjectivity, *Enter the Animal* identifies conceptual and methodological approaches that have contributed to the prejudice against nonhuman animals. It offers a compelling theoretical base for the consideration of grief and spirituality across species and highlights important ethical implications for how humans treat other animals.

Simulation Modelling has been used for many years in the manufacturing sector but has now become a mainstream tool in business situations. This is partly because of the popularity of Business Process Reengineering (BPR) and other process based improvement methods that use simulation to help analyse changes in process design. This text book includes case studies in both manufacturing and service situations to demonstrate the usefulness of the approach. A further reason for the increasing popularity of the technique is the development of business orientated and user-friendly windows-based software. This text provides a guide to the use of ARENA, SIMUL8 and WITNESS simulation software systems which are widely used in industry and available to students. Overall this text provides a practical guide to building and implementing the results from a simulation model. All the steps in a typical simulation study are covered including data collection, input data modelling and experimentation.
