Diesel engine is acknowledged for its superior efficiency and possesses a wide field of applications. It is also known as CI engine. Diesel engines also however, are the prime source of emissions such as NOX and particulate matter (PM). In order to reduce the emissions to an absolute minimum, this book explain as to how these toxins can be regulated. It is no hidden secret that the world is witnessing an oil

crisis. But with other alternative sources such as biogas, natural gas and coke based substances; diesel is not the only way forward. The unique characteristics and properties such as combustion and emission of the aforementioned alternatives are explained extensively in this book. The book also goes on to explain how one can look for early signs of wear and tear and malfunctioning components of a diesel engine and its parts.

As this volume shows, the guilds or livery companies of London started as medieval associations of tradesmen: haberdashers, skimmers, goldsmiths, and ironmongers. They became charity foundations, trustees of schools and hospitals, custodians of art treasures and historic buildings, and the electorate for the leadership of the City of London. The guilds of the old occupations sometimes retain their ancient associations, but they also elect men and women of substance from many other callings, and there have been a number of new city

companies serving air pilots, international bankers, and even tax advisers. London cannot be understood without understanding the origins of these unique societies.
