When a high-society call girl is murdered in her Georgetown home, investigators find two cameras hidden in the walls of her bedroom. One has its memory erased,

presumably by the murderer. The second is connected to the Internet through an encrypted connection...and no-one knows who's on the other end. Special Agent Allison

McNeil is asked by beleaguered FBI Director Clarence Mason to run an off-the-record investigation of the murder because of the murder's similarity to a

case she worked a year earlier. Allison knows the most direct path to apprehending the killer is to find the videos, but the rumors that the victim's client list may

pursuing the videos. In fact, the most aggressive person racing against her might be the murderer himself.

rapidly over the last 50 years, and there is a plethora of satellite sensors imaging the Earth at finer spatial and spectral resolutions as well as high temporal resolutions. The amount of data available for

any single location on the Earth is now at the petabyte-scale. An ever-increasing capacity and computing power is needed to handle such large datasets. The Google Earth Engine (GEE) is a cloud-based

computing platform that was established by Google to support such data processing. This facility allows for the storage, processing and analysis of spatial data using centralized high-power
