originate, climate and hydrologic models are still subject to considerable uncertainty. And yet, critical decisions have to be taken to ensure adequate and safe water supplies to billions of people, millions of farmers and industries, without further deteriorating rivers and water bodies. While global warming is known to cause glaciersâ€™ retreat and reduced snow packs around the world, it is not clear that mountain discharge will be lower. What is widely recognised is that water management must be adapted to accommodate significant regime changes. However, this inevitably involves managing transboundary rivers, adding further complexity to putting principles in practice. This book takes global warming and the importance of mountain areas in world water resources as the starting point. First, it provides detailed reviews of the processes going on in several rivers systems and world regions in Europe (RhÃ´ne and Ebro), North America (Canadian Rockies, Western US and Mexico), the Middle East (Jordan), Africa (Tunisia, Kenya and South Africa). These contexts provide case studies and examples that show the difficulties and potential for adaptation to global change. Land-use, economics, numerous modeling approaches are some of the cross-cutting issues covered in the chapters. The volume also includes the views of water practitioners, with two chapters authored by members of the US-Canada International Joint Commission, an industrialist from Western Canada and an environmental leader in Spain. By combining a rich set of contexts and approaches, the volume succeeds in offering a view of the global

challenges faced by water agencies, international donors and researchers around the world. A case is made in some chapters to seek adaptive strategies rather than trying to reduce or control resources variability. This requires factoring in land-use, social and economic aspects, especially in developing countries. Another conclusion is that complex problems can and must be posed and negotiated with the help of models, mapping techniques and science-based facts. However complex these may be, there are ways to translate them to easily interpretable and visualisations of alternative scenarios and courses of action. This book provides numerous examples of the potential of such approaches to draft environmental programmes solve transboundary disputes and reduce the economic consequences of droughts and climate instability.

Ben Watson has been shuffled from foster home to foster home since he was 5 years old. Seven homes in six years. He 's gotten used to blanking folks out, leaving them behind, and waiting for the day when he can leave foster care forever. Now, at the age of 11, Ben 's just arrived at home number eight. But he 's finding it hard to blank out the Torgles, his new foster parents, and their house full of strays: the 7-year-old twins, Kate and Jango, and the baby, Grover G. Graham. Grover 's just over a year old and always getting into trouble, but Ben can 't help liking the little guy — especially since Grover was abandoned by his teenage mother, just like Ben was. The only difference is that Grover 's mother, Tracey, is still trying to get custody of her child. But Ben is convinced Tracey will abandon

*When Callie's father remarries, Callie knows exactly what her life will be like. After all, she's read all the books. She's going to be stuck cleaning floors, expected to sweep the fireplace, forced to eat poisoned apples and most likely abandoned in the woods. And there's not just the new stepmother, Pam to worry about. There's also an annoying stepbrother and an evil stepsister. What's Daddy's little Princess to do? In this delightful rendition of a modern day Cinderella, Callie learns not all stepmothers are wicked and every fairytale has a unique ending. This 64 page chapter book for ages 7 and up brings the innerworkings of a blended family to life. It also addresses the underlying fears oftentimes felt when a young child must take on a new parent.*
