Canada's automotive "Dr. Phil" says there's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar, a worldwide recession driving prices downward, and a more competitive Japanese auto industry that's still reeling from a series of natural disasters.

For the past sixty years, the U.S. government has assumed that Japan's security policies would reinforce American interests in Asia. The political and military profile of Asia is changing rapidly, however. Korea's nuclear program, China's rise, and the relative decline of U.S. power have commanded strategic review in Tokyo just as these matters have in Washington. What is the next step for Japan's security policy? Will

confluence with U.S. interests—and the alliance—survive intact? Will the policy be transformed? Or will Japan become more autonomous? Richard J. Samuels demonstrates that over the last decade, a revisionist group of Japanese policymakers has consolidated power. The Koizumi government of the early 2000s took bold steps to position Japan's military to play a global security role. It left its successor, the Abe government, to further define

and legitimate Japan's new grand strategy, a project well under way-and vigorously contested both at home and in the region. Securing Japan begins by tracing the history of Japan's grand strategy—from the Meiji rulers, who recognized the intimate connection between economic success and military advance, to the Konoye consensus that led to Japan's defeat in World War II and the postwar compact with the United States. Samuels shows how the

ideological connections across these wars and agreements help explain today's debate. He then explores Japan's recent strategic choices, arguing that Japan will ultimately strike a balance between national strength and national autonomy, a position that will allow it to exist securely without being either too dependent on the United States or too vulnerable to threats from China. Samuels's insights into Japanese

This volume explores the changing nature of community in modern corporations. Community within and between firms - the fabric of trust so essential to contemporary business - has long been based on loyalty. This loyalty has been largely destroyed by three decades of economic turbulence, downsizing, and restructuring. Yet community is more important than ever in an increasingly complex, knowledge-intensive economy. The thesis of this volume is that a new form of community is slowly emerging - one that is more

flexible and wider in scope than the community of loyalty, and that transcends the limitations of both traditional Gemeinschaft and modern Gesellschaft. We call this form collaborative community. The trend towards collaborative community is difficult to detect amidst the ferocious forces of market and bureaucratic rationalization. But close analysis of some of America's most successful corporations reveals three dimensions of the emerging form: · a shared ethic of interdependent contribution: distinct from the uneasy mix of loyalty and individualism that prevailed for so long; · a formalized set of norms of interdependent process management that include iterative co-design,

metaphoric search, and systematic mutual understanding: distinct from both rigid authority hierarchies and informal log-rolling; · An interdependent social identity that supports these organizational features: distinct from both dependent, traditionalistic identities and the independence of the autonomous self that is often associated with Western culture. This volume is a collaborative effort of leading scholars in organization studies to delineate the new form of community and the forces encouraging and constraining its growth. The contributors combine sociology and psychology theory with detailed analysis of business cases at the firm and inter-firm level.

The world progresses toward Industry 4.0, and manufacturers are challenged to successfully navigate this unique digital journey. To some, digitalization is a golden opportunity; to others, it is a necessary evil. But to optimist and pessimist alike, there is a widespread puzzlement over the practical details of digitalization. To many manufacturers, digital transformation is a vague and confusing concept they nevertheless must grapple with in order to survive the Fourth Industrial Revolution. The proliferation of digital manufacturing technologies adds to the confusion, leaving many manufacturers perplexed and unprepared, with little real insight into how emerging technologies can help

Indigenous innovation and direct state support have fostered the success of a few firms, but not the majority. In response, many local firms are now taking advantage of the opportunities to be found in global production networks, which link the PRD with the global economy.
