The next quantum leap beyond Moneyball , this book offers powerful new insights into all human decision-making, because if sports teams are getting it wrong this badly, how do you know you're not? Sometimes the decisions that teams make are simply inexplicable. Consider: sports teams have an immense amount of detailed, quantifiable information to draw upon, more than in virtually any other industry. They have powerful incentives for making good decisions. Everyone sees the results of their choices, and the consequences for failure are severe. And yet... they keep making the same mistakes over and over again... systematic mistakes you'd think they'd learn how to avoid. Now, two leading sports economists reveal those mistakes in basketball, baseball, football, and hockey, and explain why sports decision-makers never seem to learn their lessons. You'll learn which statistics are connected to wins, and which aren't, and which statistics can and can't predict the future. Along the way, David Berri and Martin Schmidt show why a quarterback's place in the draft tells you nothing about how he'll perform in the NFL... why basketball decision-makers don't focus on the factors that really correlate with NBA success... why famous coaches don't deliver better results... and much more.

An axe-wielding psychopath carves young Dora Suarez into pieces and smashes the head of Suarez's friend, an elderly woman. On the same night, in the West End, a firearm blows the top off the head of Felix Roatta, part-owner of the seedy Parallel Club. The unnamed narrator, a sergeant in the Metropolitan Police's Unexplained Deaths division, develops a fixation on the young woman whose murder he investigates. And he discovers that Suarez's death is even more bizarre than suspected: the murderer ate bits of flesh from Suarez's corpse and ejaculated against her thigh. Autopsy results compound the puzzle: Suarez was dying of AIDS, but the pathologist can't tell how the virus was introduced. Then a photo, supplied by a former Parallel hostess, links Suarez to Roatta, and inquiries at the club reveal how vile and inhuman exploitation can become. I Was Dora Suarez is the fourth book in the Factory series

Written in an engaging and accessible style, this first broadly focused compensatory history of technology not only includes women's contributions but begins the long-overdue task of redefining technology and significant technology and to value these contributions correctly. Stanley traces women's inventions in five vital areas of technology worldwide--agriculture, medicine, reproduction, machines, and computers--from prehistory (or origin) forward, profiling hundreds of women, both famous and obscure. The author does not ignore theory. She contributes a paradigm for male takeovers of technologies originated by women.

Great Maritime Inventions 1833-1950 is a delightful look at how innovative Maritime ideas changed the world. Between 1833 and 1950, over 3,300 patents were granted to residents of New Brunswick, Nova Scotia and PEI. From the scuba tank to the variable pitch propeller to two-piece long underwear, Great Maritime Inventions profiles the best of the best. Included are inventions that are considered to be great advances in science, those that have substantially changed the course of development of technology, or those that have enjoyed a lasting success that can still be remembered or observed to this day. All of the inventions described in the book were completely novel in their day. Each patent is first in its classification, or else its claims are so broad that the intellectual property protection it gave covered every possible precursor. Before a patent was granted, an applicant had to declare that their invention was entirely new. Each application then underwent a thorough examination by expert examiners at the patent office. Each of the patents in Great Maritime Inventions were found to represent knowledge newly available to the public, and to be an important step forward in engineering or in developing consumer products that enhance our lives. Not all inventions were spectacular. In fact, many of these inventions never made it into the history books. It is only after fifty years or more that we realize the influence that every one of these inventions has had on our society. Each invention, large or small, was an important link in the chain of evolution of science and useful arts and has improved the way we live today.

Written by the Shale Shaker Committee of the American Society of Mechanical Engineers, originally of the American Association of Drilling Engineers, the authors of this book are some of the most well-respected names in the world for drilling. The original book has been much expanded to include many other aspects of drilling solids control, including chapters on drilling fluids, cut-point curves, mud cleaners, and many other pieces of equipment that were not covered in the original book. Written by a team of more than 20 of the world's foremost drilling experts, from such companies as Shell, Conoco, Amoco, and BP There has never been a book that pulls together such a vast array of materials and depth of topic coverage in the area of drilling fluids Covers quickly changing technology that updates the drilling engineer on all of the latest equipment, fluids, and techniques

Life cycle engineering explores technologies for shifting industry from mass production and consumption paradigms to closed-loop manufacturing paradigms, in which required functions are provided with the minimum amount of production. This subject is discussed from various aspects: life cycle design, design for environment, reduce-reuse-recycle, life cycle assessment, and sustainable business models.

This book collects papers from the 14th International CIRP Life Cycle Engineering Conference, the longest-running annual meeting in the field.

From planning and planting to harvesting, GUIDE TO GROWING VEGETABLES is the most comprehensive and authoritative guide to growing your own vegetables and herbs. That's good news for gardeners everywhere, as the "eat local" movement continues to gain momentum across the country.

This book contains the proceedings of the seventh in a series of biennial conferences on the topic of sustainable regional development that began in 2003. Organised by the Wessex Institute, the conference series provides a common forum for all scientists specialising in the range of subjects included within sustainable development and planning. In order to ensure that planning and development can meet our present needs without compromising future generations, planners, environmentalists, architects, engineers, policy makers, and economists must work together The use of modern technologies in planning gives us new potential to monitor and prevent environmental degradation. In recent years, in many countries an increase in spatial problems has led to planning crises. Planning problems are often associated with uneven development, deterioration of the quality of urban life, and destruction of the environment. The increasing urbanisation of the world, coupled with the global issues of environmental pollution, resource shortage, and economic restructuring, demand that we ensure a decent quality of life for our cities. Other environments, such as rural areas, forests, coastal regions, and mountains, face their own problems that urgently require solutions in order to avoid irreversible damage. Effective strategies for management should consider planning and regional development, two closely related disciplines, and emphasise the demand to handle these matters in an integrated way. The papers in the book cover such topics as: Regional Planning; City Planning; Sustainability and the Built Environment; Cultural Heritage; Environmental Management; Environmental Policies and Planning; Sustainable Tourism; Resources Management; Social and Political Issues; Rural Developments; Sustainable Solutions in Emerging Countries; Transportation; Energy Resources; Environmental Economics; Sustainable Assessment; Sustainable Development Indicators; Sustainability Modelling; Governance; Resilience; Community Planning; Planning for Equality; Quality of Life.

This is the 4th edition of the IET's Code of Practice for Inservice Inspection and Testing of Electrical Equipment. The book has been revised to take account of the PAT aspects of Professor Löfstedt's report and the HSE view that promotes a proportionate riskbased approach when assessing the safety of electrical equipment and appliances. This will help users, those responsible for the equipment and testers of the equipment to maintain safety. HSE encourages the adoption of this approach and the changes will also be reflected in the City & Guilds 2377 course. The Code of Practice enables duty holders to understand the

This book gets behind much generality about globalisation to examine the production of relatively familiar commodities such as refrigerators and ovens in different countries. By considering a range of countries - China, Taiwan and South Korea, South Africa, Brazil and Turkey - it makes a substantive contribution to the understanding of the diffusion of management methods, the role of the state in employee relations, the nature of trade unionism and the impact of social structure on production relations.
