TRAC: Trends in Analytical Chemistry, Volume 11 presents relevant topics in global analytical chemistry research. This book discusses the fundamental principle of competitive immunoassays. Organized into 27 chapters, this volume begins with an overview of the general and important contributions relating to the presentation of forensic evidence to courts of law. This text then discusses the importance of the analysis of scanned measuring quantities. Other chapters consider the advantages as

well as the drawbacks of coupled chromatographic methods. This book discusses as well the status of analytical chemistry within the broader scientific arena as a practical rather than fundamentally oriented discipline. The final chapter deals with the properly functioning process control system in manufacturing insulin by reversed-phase high-performance liquid chromatography (RP-HPLC). This book is a valuable resource for analytical, organic, clinical, and regulatory chemists. Electrochemists, scientists, students, engineers, researcher workers, and other practitioners will also find this book extremely useful.

Metaphor in Specialist Discourse presents multiple perspectives on metaphor use in specialist and popularized discourse contexts. Using genre and register as starting parameters for deeper exploration, and pushing the boundaries further to open

up new areas and possibilities, ten independent articles investigate metaphor use across a range of specialist domains of discourse, such as biology research articles, psychological counseling, soccer commentaries, workfloor communication, and penal policy documents. Framed by two theoretical chapters, the book is a contribution to the study of metaphor use in distinct discourse settings that will be of value to linguists and metaphor scholars of different persuasions, graduate students of linguistics and related disciplines, and practitioners of specialized areas with an interest in (verbal or gestural) language use in their areas of expertise. It shows that aspects of discourse variation are the beginning of, not an afterthought to, accurate empirical metaphor studies. Understanding change over time is a central concern for research in sociology, political science, education, geography

and related disciplines. It is also an issue which presents significant methodological problems, in response to which different techniques have been developed - for example, time series analysis, multilevel models, log-linear models and event history analysis. Outlining the nature of such techniques, this accessible collection covers: the respective values of cross-sectional and longitudinal data in the analysis of change; the variety of methods available for the analysis of change over time; the types of research objective to which various techniques are suited; the limitations and constraints of individual methods; and th

Palliative Nursing is an evidence-based practical guide for nurses working in areas of practice where general palliative care is provided. This may be in hospitals, nursing homes, dementia units, the community and any other clinical areas which are not classified as specialist palliative care. This book first

explores the history and ethos of palliative care, and then looks at palliative nursing across various care settings. It then looks at palliative nursing care for people with specific illnesses, including heart failure, dementia, chronic obstructive pulmonary disease, cancer, and neurological conditions. Palliative care for children and young people is discussed, and then the book finally looks at education and research in palliative nursing.

Beginning with the germ theory of disease in the 19th century and extending through most of the 20th century, microbes were believed to live their lives as solitary, unicellular, disease-causing organisms . This perception stemmed from the focus of most investigators on organisms that could be grown

in the laboratory as cellular monocultures, often dispersed in liquid, and under ambient conditions of temperature, lighting, and humidity. Most such inquiries were designed to identify microbial pathogens by satisfying Koch's postulates.³ This pathogen-centric approach to the study of microorganisms produced a metaphorical "war" against these microbial invaders waged with antibiotic therapies, while simultaneously obscuring the dynamic relationships that exist among and between host organisms and their associated microorganisms—only a tiny fraction of which act as pathogens. Despite their obvious

importance, very little is actually known about the processes and factors that influence the assembly, function, and stability of microbial communities.

Gaining this knowledge will require a seismic shift away from the study of individual microbes in isolation to inquiries into the nature of diverse and often complex microbial communities, the forces that shape them, and their relationships with other communities and organisms, including their multicellular hosts. On March 6 and 7, 2012, the Institute of Medicine's (IOM's) Forum on Microbial Threats hosted a public workshop to explore the emerging science of

the "social biology" of microbial communities. Dementia represents a major public health challenge for the world with over 100 million people likely to be affected by 2050. A large body of professionals is active in diagnosing, treating, and caring for people with dementia, and research is expanding. Many of these specialists find it hard to keep up to date in all aspects of dementia. This book helps solve that problem. The new edition has been updated and revised to reflect recent advances in this fast-moving field. Disk contains forms from the printed text in WordPerfect 5.1 format.

What can schools and teachers do to promote discipline in the classroom? How do discipline and learning interact? The Elton Committee was set up in 1989 to consider 'what action can be taken to secure the orderly atmosphere necessary in schools for effective teaching and learning to take place'. In this collection of papers, originally published in 1992, ten leading figures in the psychology of education reflect on some of the issues raised by the Elton Report and provide a series of

Areas covered include whole-school approaches to discipline, the connection between learning difficulties and discipline problems, the effectiveness of positive behavioural methods of classroom management, the possible uses of techniques derived from family therapy in classroom discipline situations and the 'good relationship' between teacher and student as an agent of change. Though the perspectives of the contributors are very different, the emphasis throughout is on establishing a

What This Book Is This book is about radar. It will teach you the essentials of radar, the underlying principles. It is not like an engineering handbook which provides detailed design equations without explaining either derivation or rationale. It is not like a graduate school textbook which may be abstruse and esoteric to the point of incomprehensibility. And it is not like an anthology of popular magazine articles which may be

gaudy but superficial. It is an attempt to distill the very complex, rich technology of radar into its fundamentals, tying them to the laws of nature on one end and to the most modern and complex systems on the other. Who It's For If your work requires you to supervise or meet as coequals with radar systems engineers or designers, this book will allow you to understand them, to question them intelligently and perhaps to provide them with a perspective (a dispassionate yet competent view) that they lack. If you are trained in another discipline but have been made
