This report looks at examples of Free trade zones (FTZ) from around the world and sees how the concept of logistics centres can be applied in practice. The report concludes that the traditional import/export port needs to move into one of two markets, or a combination of both; these markets are transshipment or logistics centres. The report identifies that an optimum enabling environment needs to be created that is

service orientated, largely free of bureaucracy and has excellent connectivity both physically and electronically between all stakeholders. Where the optimum enabling environment cannot be implemented nationwide, the creation of a FTZ is a first step to attracting funds necessary to finance this change. The report concludes with a summary of the key guidelines for policy makers to consider in the transition from a traditional import/export port to a logistics centre port. The public sector provides services to the public and does not expect to acquire financial gain; hence, the practices from the private sector could not be used efficiently without modification, bearing in mind that the main scope of the public organization is to provide quality services to the citizens. Knowledge management can acquire and transfer knowledge in order to succeed in this effort and to confront challenges that exist in the modern knowledge economy. Therefore, knowledge management can play a vital role in the reorganization of

In the new world of work, agility is a business imperative. From small tech start-ups or large traditional companies, organizations need to be fast, flexible and digitally empowered to succeed. However, too many companies are stuck with siloed, compliance-driven HR processes that work in opposition to the business rather than supporting it. This results in the view that HR is slow and out of touch. However, Agile HR shows that this doesn't need to be the case. It is a practical guide written specifically for people professionals on how the HR function can develop agile processes and practices that save time, boost performance and support overall business goals. Knowledge Management Practices in the Public Sector

This book addresses the importance of human factors in optimizing the learning and training process. It reports on the latest research and best practices, and discusses key principles of behavioral and cognitive science, which are extremely relevant to the design of instructional content and new

technologies to support mobile and multimedia learning, virtual training and web-based learning, among others, as well as performance measurements, social and adaptive learning and many other types of educational technology, with a special emphasis on those important in the corporate, higher education, healthcare and military training contexts. Gathering contributions to the AHFE 2020 Virtual Conference on Human Factors in Training, Education, and Learning Sciences, held on July 16-20, 2020, the book offers a timely

perspective on the role of human factors in education. It highlights important new approaches and ideas, and fosters new discussions on how to optimally design learning experiences.

Knowledge Management Matters: Words of Wisdom from Leading Practitioners is a collection of works penned by this amazing and diverse group of thought leaders. Each of these trailblazers has generously shared their knowledge with a view to helping you and your organization succeed in the knowledge environment. The tips, tactics,

and techniques they suggest are time-tested and proven concepts that will help you achieve your organizational objectives. Their collective works are based on decades of experiences with real-world organizations. This is not a book of untested theories that might work, but rather a compilation of genuine words of wisdom from experienced KM practitioners who know knowledge management. Knowledge Management Matters starts with a brief overview of the evolution of knowledge management. Building on this historical

foundation, we launch a wide-ranging exploration of the domain. Throughout the book are excellent examples of what works, what doesn't, and some thought-provoking teases about the future. The authors offer great advice on a variety of subjects including storytelling, big data, creativity & innovation, leading communities, knowledge assets, co-creation, catering for a transient workforce and so much more. knowledge economy the marketplace is not divided into towns and regions but into affinity groups that emerge from a high propensity to sociability. In a truly open global economy, no one country is able to dominate others in isolation: knowledge-driven economies and knowledge-based societies can materialize only through the 'chemistry' of community. The focus of this book is on profiling, in socio-technical terms, ways and means that creativity, invention and innovation are manifested and flourish in select American, European,

and Asian knowledge-based innovation networks and knowledge clusters. Twelve conceptual and empirical studies are presented that contribute to the theory and practice of technological entrepreneurship in the context of socio-technical networks architecture design, form and function. These are studied from diverse theoretical perspectives, including regional development economics and sociology of innovation, as well as regional science and technology, and knowledge management. This book celebrates the past, present and

future of knowledge management. It brings a timely review of two decades of the accumulated history of knowledge management. By tracking its origin and conceptual development, this review contributes to the improved understanding of the field and helps to assess the unresolved questions and open issues. For practitioners, the book provides a clear evidence of value of knowledge management. Lessons learnt from implementations in business, government and civil sectors help to appreciate the field

and gain useful reference points. The book also provides guidance for future research by drawing together authoritative views from people currently facing and engaging with the challenge of knowledge management, who signal a bright future for the field.

Artificial Intelligence (AI) has the potential to address some of the biggest challenges in education today, innovate teaching and learning practices, and ultimately accelerate

the progress towards SDG 4. However, these rapid technological developments inevitably bring multiple risks and challenges, which have so far outpaced policy debates and regulatory frameworks. This publication offers guidance for policy-makers on how best to leverage the opportunities and address the risks, presented by the growing connection between AI and education. It starts with the essentials of AI: definitions, techniques and technologies. It continues with a detailed analysis of the emerging

trends and implications of AI for teaching and learning, including how we can ensure the ethical, inclusive and equitable use of AI in education, how education can prepare humans to live and work with AI, and how AI can be applied to enhance education. It finally introduces the challenges of harnessing AI to achieve SDG 4 and offers concrete actionable recommendations for policy-makers to plan policies and programmes for local contexts.
