Selected by The Business Times as one of the Best Books of 2014 Recommended by the National Library Board, Singapore and Ministry of Communications and Information The Keretapi Tanah Melayu (KTM) train that ran between Singapore and Malaysia for almost 80 years was rerouted to Woodlands Train Checkpoint following the closure of Tanjong Pagar Railway Station—now a gazetted national monument—in June 2011. Based on real tours led by architecture historian Lal Chee Kien, Last Train from Tanjong Pagar follows a group of heritage enthusiasts as they discover Singapore’s railway heritage, and gather with passengers from all walks of life for one final ride out of Tanjong Pagar station. Seamlessly blending fact and fiction, Koh Hong Teng has produced a timely and thought-provoking graphic homage to our trains and not only the physical journeys but also the human connections they have made possible. This title introduces readers to the features, brand history, and sponsored motocross athletes of KTM dirt bikes. This title includes informative sidebars, detailed infographics, vivid photos, and a glossary.

A dazzling tribute to the KTM X-Bow car – the world’s first production sports car with a full carbon composite monocoque. To fully understand and enjoy this car, it can, and should be appreciated on many different levels: a racing car for the road, and a road car that can excel on the track; its unique composition and aerodynamic qualities; its design and aesthetics. This is a car that was brought to life by the virtually unlimited monetary resources of an industrial giant, steeped in motorsport, who demanded that it be technologically cutting-edge. The car was honed to perfection by arguably the finest racing car engineers in the world, for whom ‘best in class’ was a minimum requirement. It is an objet d’art that can race in anger, or can transport in style. It startles, it fascinates, it wins. As Mr Toad (of Wind in the Willows fame) would undoubtedly have said, it is “A Most Unusual Car!” – we are lucky that this most unusual car, the KTM X-BOW, exists in our lifetime.

This book details the design and development, the build process, racing history, and what it’s like to live with and maintain an X-Bow, written by joint owners and enthusiasts, with the full cooperation of the designers and developers.

This easy-to-use introduction to Microsoft Windows Communication Foundation (WCF) is ideal for developers who want to learn to build services on a company network or as part of an enterprise system. Built into Windows Vista and Longhorn, and available for Windows XP and Windows 2003, WCF provides a platform for service-oriented architecture (SOA) that enables secure and reliable communication among systems within an organization or across the Internet. With WCF, software developers can focus on their business applications and not the plumbing required to connect them. Furthermore, with WCF developers can learn a single programming API to achieve results previously provided by ASMX, Enterprise Services and .NET Remoting. Learning WCF removes the complexity of using this platform by providing detailed answers, explanations and code samples for the most common questions asked by software developers. Windows Communication Foundation (or WCF, formerly code name “Indigo”) provides a set of programming APIs that make it easy to build and consume secure, reliable, and transacted services. This platform removes the need for developers to learn different technologies such as ASMX, Enterprise Services and .NET Remoting, to distribute system functionality on a corporate network or over the Internet. The first truly service-oriented platform, WCF provides innovations that decouple service design and development from deployment and distribution - creating a more flexible and agile environment. WCF also encapsulates all of the latest web service standards for addressing, security, reliability and more.

A gripping and page-turning thriller that explores themes of power, information, secrecy and war in the twentieth century. From the author of the three-volume historical epic ‘The Baroque Cycle’ and Seveneves. In his legendary, sprawling masterpiece, Neal Stephenson hacks into the secret histories of nations and the private obsessions of men, decrypting with dazzling virtuosity the forces that shaped this century. In 1942, Lawrence Pritchard Waterhouse - a mathematical genius and young Captain in the U.S. Navy - is assigned to Detachment 2702, an outfit so secret that only a handful of people know it exists. Some of those people have names like Churchill and Roosevelt. Their mission is to keep the Nazis ignorant of the fact that Allied Intelligence has cracked the enemy’s fabled Enigma code. Waterhouse is flung into a cryptographic chess match against his German counterpart - one where every move determines the fate of thousands. In the present day, Waterhouse’s crypto-hacker grandson, Randy, is attempting to create a “data haven” in Southeast Asia where encrypted data can be stored and exchanged free of repression and scrutiny.

Joining forces with the tough-as-nails Amy, Randy attempts to secretly salvage a sunken Nazi submarine that holds the key to keeping the dream of a data haven afloat. But their scheme brings to light a massive conspiracy with its roots in Detachment 2702 - and an unbreakable Nazi code called Arethusa. There are two ways this could go: towards unimaginable riches and a future of personal and digital liberty - or towards a totalitarian nightmare... Profound and prophetic, hypnotic and hyperactive, Cryptonomicon is a work of great art, thought and creative daring, the product of a ingenious imagination working with white-hot intensity.
