Permettre de concevoir, développer et utiliser des systèmes de diagnostic, de surveillance et de maintenance prédictive pour systèmes complexes (avions, centrales nucléaires, transport, etc.), afin d'optimiser les performances de la sûreté de fonctionnement : tel est l'objectif de cet ouvrage. Pour cela Fiabilité, diagnostic et maintenance prédictive des systèmes s'appuie sur la modélisation des systèmes (parties commandes et opératives), l'évaluation probabiliste et déterministe du fonctionnement, et la conception de systèmes de surveillance. Cet ouvrage fait le lien entre le diagnostic, la maintenance et la fiabilité des systèmes techniques, du plus simple au plus complexe. Son approche novatrice et sa présentation en font un véritable guide théorique et pratique pour les ingénieurs qui pourront y trouver la réponse à de nombreux problèmes de diagnostic, de surveillance et de maintenance, en particulier grâce à l'analyse vibratoire. Très didactique et accompagné de plus de 100 exercices et problèmes résolus reflétant des situations concrètes, il présente les concepts de base pour concevoir et développer correctement des outils ou des systèmes de diagnostic et de maintenance conditionnelle (prédictive) indispensables aux ingénieurs ou aux élèves ingénieurs en génie industriel, génie mécanique, robotique ou sûreté de fonctionnement dans les domaines les plus variés.

The Lara Family

Continental Handbook & Guide to Western Europe

After discovering additional information pertaining to his paternal side of the family, author Christopher G. Peña revised his original book to provide the reader with a richly detailed account of each member of the Peña-Lara family, along with their respective spouses. Both highly informative and engaging, *The Peña-Lara Story: Revisited* retraces the family's roots that began in New Spain (Mexico), including the military exploits of the family's patriarch, Lt. Col. José Emeterio Pozas, who served under Spain and Mexico. In addition, the story includes an account of the family's life in Monterrey, Nuevo León, Mexico, the Peña-Lara's forced evacuation of the city during the height of the 1910-1920 Mexican Revolution, the family's assimilation into the United States, including the military service of six of the Peña-Lara sons during the Second World War and, finally, the family's postwar years. It is a family chronicle that includes almost two centuries of history telling. *The Pena-Lara Story: Revisited* provides the reader with a wealth of new and detailed information about the family's origins, some of which was recently discovered during an exhaustive search through Mexican Civil and Church archival records, as well as many United States civil and religious documents. This information now enlightens – and contradicts – long-held beliefs about the origins and lives of the Peña-Lara lineage.

D?at de S?rac (1872-1921) is best known for his piano music but his compositions included orchestral and vocal works, including opera, cantata and incidental music. Claude Debussy described S?rac's music as "exquisite and rich with ideas." The early works were influenced by Impressionist harmonies, church modes, cyclic techniques, folk-like melodies and Andalusian motives. S?rac's style changed dramatically in 1907 when he left Paris and began to include Catalan elements in his compositions - a transition that has hitherto gone unrecognized. Robert Waters provides a much-needed study of the life and works of S?rac, focusing on the composer's regionalist philosophy. S?rac's engagement with folk music was not a patriotic gesture in the vein of nationalistic composers, but a way of expressing regional identity within France to counter the restrictive styles sanctioned by the Paris Conservatory. His musical philosophy mirrored larger social and political debates regarding anti-centralist positions on education, politics, art and culture in fin de si?e France. Such debates involved political and social leaders whom S?rac knew and personally admired, including the writer Maurice Barr?and the poet Fr?ric Mistral. The book will appeal to those specializing in French music, European ethnic musics, piano music and French music history.

Molecular Mechanisms and Genetics of Plant Resistance to Abiotic Stress

We are currently experiencing a climate crisis that is associated with extreme weather events worldwide. Some of its most noticeable effects are increases in temperatures, droughts, and desertification. These effects are already making whole regions unsuitable for agriculture. Therefore, we urgently need global measures to mitigate the effects of climate breakdown as well as crop alternatives that are more stress-resilient. These crop alternatives can come from breeding new varieties of well-established crops, such as wheat and barley. They can also come from promoting underutilized crop species that are naturally tolerant to some stresses, such as quinoa. Either way, we need to gather more knowledge on how plants respond to stresses related to climate breakdown, such as heat, water-deficit, flooding high salinity, nitrogen, and heavy metal stress. This Special Issue provides a timely collection of recent advances in the understanding of plant responses to these stresses. This information will definitely be useful to the design of new strategies to prevent the loss of more cultivable land and to reclaim the land that has already been declared unsuitable.

Masters Theses in the Pure and Applied Sciences was first conceived, published, and disseminated by the Center for Information and Numerical Data Analysis and Synthesis (CINDAS) at Purdue University in 1957, starting its coverage of theses with the academic year 1955. Beginning with Volume 13, the printing and dis semination phases of the activity were transferred to University Microfilms/Xerox of Ann Arbor, Michigan, with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community. After five years of this JOint undertaking we had concluded that it was in the interest of all concerned if the printing and distribution of the volumes were handled by an international publishing house to assure improved service and broader dissemination. Hence, starting with Volume 18, Masters Theses in the Pure and Applied Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York, and in the same year the coverage was broadened to include Canadian universities. All back issues can also be ordered from Plenum. We have reported in Volume 40 (thesis year 1995) a total of 10,746 thesis titles from 19 Canadian and 144 United States universities. We are sure that this broader base for these titles reported will greatly enhance the value of this impor tant annual reference work. While Volume 40 reports theses submitted in 1995, on occasion, certain uni versities do report theses submitted in previous years but not reported at the time.*

Plants have developed very sophisticated mechanisms to combat pathogens and pestsusingtheleastamountofresourcesgeneratedenergypossible. Theydothis by activating major defense mechanisms after recognition of the organisms that are considered to be detrimental to their survival; therefore they have been able to exist on Earth longer than any other higher organisms. It has been known for the past century that plants carry genetic information for inherited resistance against many pathogenic organisms including fungi, bacteria, and viruses, and that the relationship between pathogenic organisms and hosts plants are rather complex and in some cases time dependent. This genetic information has been the basis for breeding for resistance that has been employed by plant breeders to develop better-yielding disease resistant varieties, some of which are still being cultivated. Single gene resistance is one type of resistance which has been extensively studied by many research groups all around the world using biotechnological methodologies that have been the subject of many books and journal articles; therefore, it is beyond the scope of this book. This type of resistance is very effective, although it can be overcome by the pressure of pathogenic organisms since it depends on interaction of a single elicitor molecule from the pathogen with a single receptor site in the host.

Made in Baja

Grand Dictionnaire Universel [du XIXe Siecle] Français: A-Z 1805-76

Located near Cartagena de Indias, Colombia, Palenque is a former Afro-Hispanic maroon community that has recently attracted much national and international attention. The authors of this collection examine Palenque’s linguistic, geographic, and cultural origins from interdisciplinary and theoretically diverse perspectives. Extensive in situ fieldwork and long-term familiarity with the Palenquero community form the basis of the seven essays, all of which are enriched by data from archival and other scholarly works. In this book, linguists, literary scholars, historians, and specialists in cultural and visual studies thereby enter into mutually enriching dialogues about the origins and nature of Palenque’s unique Lengua (local creole) and culture. This rich tapestry of ideas is decidedly international, as its authors are members of academic institutions in the United States, Europe, and Latin America. Orality, Identity, and Resistance in Palenque (Colombia) is an updated translation of Palenque, Colombia: Oralidad, Identidad y resistencia, 2012.

Much of the produce that Americans eat is grown in the Mexican state of Baja California, the site of a multibillion-dollar export agricultural boom that has generated jobs and purportedly reduced poverty and labor migration to the United States. But how has this growth affected those living in Baja? Based on a decade of ethnographic fieldwork, Made in Baja examines the unforeseen consequences for residents in the region of San Quintin. The ramifications include the tripling of the region’s population, mushrooming precarious colonia communities lacking basic infrastructure and services, and turbulent struggles for labor, civic, and political rights. Anthropologist Christian Zlotniski reveals the outcomes of growers structuring the industry around an insatiable demand for fresh fruits and vegetables. He also investigates the ecological damage—“watercide”—and the social side effects of exploiting natural resources for agricultural production. Weaving together stories from both farmworkers and growers, Made in Baja provides an eye-opening look at the dynamic economy developing south of the border.

Few Mexican musicians in the twentieth century achieved as much notoriety or had such an international impact as the popular singer and songwriter Agustín Lara (1897-1970). Widely known as "el flaco de oro" ("the Golden Skinny"), this remarkably thin fellow was prolific across the genres of bolero, ballad, and folk. His most beloved "Granada", a song so enduring that it has been covered by the likes of Mario Lanza, Frank Sinatra, and Plácido Domingo, is today a standard in the vocal repertory. However, there exists very little biographical literature on Lara in English. In Agustín Lara: A Cultural Biography, author Andrew Wood's informed and informative placement of Lara's work in a broader cultural context presents a rich and comprehensive reading of the life of this significant musical figure. Lara's career as a media celebrity as well as musician provides an excellent window on Mexican society in the mid-twentieth century and on popular culture in Latin America. Wood also delves into Lara's music itself, bringing to light how the composer's work unites a number of important currents in Latin music of his day, particularly the bolero. With close musicological focus and in-depth cultural analysis riding alongside the biographical narrative, Agustín Lara: A Cultural Biography is a welcome read to aficionados and performers of Latin American musics, as well as a valuable addition to the study of modern Mexican music and Latin American popular culture as a whole.

This book contains state of the field discussion about the nature of revolt and resistance in the ancient world. While it doesn't cover the entire ancient world, it does focus in on the key revolts of the pre-Roman imperial world.

The author describes how Muslims over the centuries have determined the sacred direction ("qibla") towards Mecca and presents two highly sophisticated Mecca-centred world-maps for finding the "qibla." These recently-discovered world-maps have forced a reevaluation of Muslim achievements in mathematics and cartography.

For much of the Middle Ages, the Lara family was among the most powerful aristocratic lineages in Spain. Protesgs of the monarchy at the time of El Cid, their influence reached extraordinary heights during the struggle against the Moors. Hand-in-glove with successive kings, they gathered an impressive array of military and political positions across the Iberian Peninsula. But cooperation gave way to confrontation, as the family was pitted against the crown in a series of civil wars. This book, the first modern study of the Laras, explores the causes of change in the dynamics of power, and narrates the dramatic story of the events that overtook the family. The Laras' militant quest for territorial strength and the conflict with the monarchy led toward a fatal end, but anticipated a form of aristocratic power that long outlived the family. The noble elite would come to dominate Spanish society in the coming centuries, and the Lara family provides important lessons for students of the history of nobility, monarchy, and power in the medieval and early modern world.
