

Le Petit Guide Entomo

Vols. for 1959- include : Fascicule spécial: Liste annuelle des publications d'auteurs belges à l'étranger et des publications étrangères relatives à la Belgique acquises par la Bibliothèque royale de Belgique.

This book provides stimulating and timely suggestions about expanding the world food supply to include a variety of minilivestock. It suggests a wide variety of small animals as nutritious food. These animals include arthropods (insects, earthworms, snails, frogs), and various rodents. The major advantage of minilivestock is that they do not have t

Britain's Hoverflies is a beautifully illustrated photographic field guide to all the genera of hoverflies found in Britain, focusing on the species most likely to be identified. Accessible and designed to appeal to a wide audience, the book contains more than 500 remarkable photographs exploring the various life stages of all 69 hoverfly genera and the 164 most commonly seen species. Easy-to-use species accounts highlight key identification features, including status, behavior, and habitat requirements. The book also contains distribution maps, phenology charts, and introductory chapters that examine hoverfly biology. This guide is the perfect companion for wildlife enthusiasts, professional ecologists, and anyone with an interest in this unique insect family. More than 500 remarkable photographs depict all 69 hoverfly genera and the 164 most commonly seen species in Britain that can be identified by eye or with a magnifying glass

Introductory chapters explore hoverfly biology

Species accounts highlight key features of each genus and species, including status, behavior, and habitat

Maps and phenology charts examine hoverfly distribution

A complete list of the 281 hoverfly species recorded in Britain to date with degrees of identification difficulty

"Bibliographic references to works pertaining to the taxonomy of Coleoptera published between 1758 and 1900 in the non-periodical literature are listed. Each reference includes the full name of the author, the year or range of years of the publication, the title in full, the publisher and place of publication, the pagination with the number of plates, and the size of the work. This information is followed by the date of publication found in the work itself, the dates found from external sources, and the libraries consulted for the work. Overall, more than 990 works published by 622 primary authors are listed. For

each of these authors, a biographic notice (if information was available) is given along with the references consulted"--[p. 1].

Arthropod Diversity and Conservation

Library of Congress Catalogs

Catalogue annuel de la librairie française

This collection of more than 30 peer-reviewed papers focuses on the diversity and conservation of arthropods, whose species inhabit virtually every recess and plane - and feature in virtually every food web - on the planet.

Highlighting issues ranging from large-scale disturbance to local management, from spatial heterogeneity to temporal patterns, these papers reflect exciting new research - and take the reader to some of the most biodiverse corners of the planet.

Palaeolimnology is one of the most rapidly developing fields of limnology. The primary objective of this volume is to present new palaeolimnological findings from eastern and central Europe. Although this area has sometimes received less attention than other areas of Europe, the lakes and mires, coupled with the variability in landscape and the local differences in climate, provide unique opportunity for studying palaeolimnology. The volume starts with a review on late Quaternary records from the Carpathian region, followed by new results on the history of a crater lake, Lake Saint Ana, glacial lakes in the Tatra Mountains and Lake Bled in Slovenia. In addition, the various papers provide new insights on the development of lakes and bogs during the late glacial and Holocene, using a wide range of palaeolimnological proxies, including diatoms, pollen, microfossils, pigments, cladoceran remains, chironomids, chaoborids, stable isotopes and geochemistry. The motivation for collecting recent knowledge derives from the recognition of the importance, and applicability of palaeolimnological tools to help in defining "reference conditions" as designated within the Water Framework Directives and estimating influence of global climate change on surface waters.

Palaeolimnological Proxies as Tools of Environmental Reconstruction in Fresh Water

As a crucial source of grants, studies, research, and other not-for-profit services, the world's growing roster of foundations each year dispenses literally billions of dollars on causes ranging from eradicating AIDS to monitoring human rights abuses to promoting free speech on the Internet. Whether you're looking for the phone number of the Ford Foundation, or a list of scientific foundations in Switzerland, you'll find everything you need to know in this first edition of the *World Guide to Foundations*. It brings together over 21,750 foundations on six continents and some 112 countries, from Albania to Zimbabwe. Entries are arranged alphabetically by country and typically include: -- The foundation's name and abbreviation -- Address, phone and fax numbers, and e-mail address -- Year of origin -- Key personnel, including chairman, managing director, and donors -- Financial resources and annual income and expenses -- Type of foundation and its aims -- Publications Offering additional points of entry are indexes by foundation name and over 199 different subject areas, such as education, peace studies, or consumer protection. A German-English concordance for subject areas is also provided.

This book presents new food production systems (for plants and animals) involving agrochemicals that increase in a controlled manner the bioactives content, under greenhouse conditions. Moreover, conception and design of new instrumentation for precision agriculture and aquiculture contributing in food production is also highlighted in this book.

Biosystems Engineering: Biofactories for Food Production in the Century XXI

DNA barcoding has become a well-accepted and popular tool for the identification of species and the detection of cryptic taxonomic diversity. As such, it has a tremendous potential for a wide variety of applications in taxonomy, agronomy, conservation biology, forensics etc. Therefore, several countries, institutions and organizations have launched

DNA barcoding projects in the context of the international 'Consortium for the Barcode of Life' (CBOL) initiative. Also Belgium has done so with the establishment of the FWO research community 'Belgian Network for DNA barcoding'. In 2012, this network organized the 'Third European Conference for the Barcode of Life' (ECBOL3) in Brussels. During this event a call was made to publish a collection of papers under the thematic title 'DNA barcoding: a practical tool for fundamental and applied biodiversity research'. With the financial support of the EC project 'ViBRANT' (Virtual Biodiversity Research and Access Network for Taxonomy), 21 papers were bundled to form this special 'ZooKeys' issue with the aim to present various applications, advantages and limitations of DNA barcoding. Hence, it is the editors' hope that this issue provides a modest, but timely, contribution to the already vast literature on DNA barcoding.

Catalogue général de la librairie française: 1840-1875. Table des matières

One of the outstanding problems of the biologist, whether he be beginning student or specialists, is that of understanding technical terms. The best way to understand and remember technical terms is to understand first their component parts, or roots. This dictionary has been designed primarily to meet the needs of the beginning student, the medical student, and the taxonomist, but it should be of value to all biologists.

Après une présentation des insectes et de leur mode de vie, l'auteur donne des conseils de base pour les débusquer, les observer et les identifier. Puis 160 espèces parmi les plus communes ou les plus remarquables d'Europe occidentale font l'objet d'une fiche détaillée illustrée de photos et de dessins, complétées par une centaine d'espèces proches supplémentaires illustrées en photo.
