

Les Produits Cosma C Tiques Au Naturel Jeunesse E

This book is a collection of essays which examine how the properties of aggregate variables are influenced by the actions and interactions of heterogenous individuals in different economic contexts. The common denominator of the essays is a critique of the representative agent hypothesis. If this hypothesis were correct, the behaviour of the aggregate variable would simply be the reproduction of individual optimising behaviour. In the methodology of the hard sciences, one of the achievements of the quantum revolution has been the rebuttal of the notion that aggregate behaviour can be explained on the basis of the behaviour of a single unit: the elementary particle does not even exist as a single entity but as a network, a system of interacting units. In this book, new tracks in economics which parallel the developments in physics mentioned above are explored. The essays, in fact are contributions to the analysis of the economy as a complex evolving system of interacting agents.

Decision Support Modeling

"The applied research indicates that, to improve awareness, park education programs should be targeted specifically to the user groups primarily through outreach programs. Further, the Park's management programs should be highlighted, particularly the beneficial, tangible products and services (benefits) the Park provides to each user group... The closer the tie between reef conditions and business earnings, the greater the users' support for reef conservation." Coral reefs are sometimes referred to as "canaries of the sea" because of their early warning ability to show near-shore oceanic stress. Because of their biological diversity, they are also called "rainforests of the sea." Coral reefs are vital to the well being of millions of people. Coral reef managers and government officials trying to save their valuable national resources have turned to research on coral reefs for help. The research presented in this publication merits a great deal of notice because the output is useful for decision support and training tools in integrated coastal zone management (ICZM). The work on cost-effectiveness analysis has developed integrated economic and ecological models, relying extensively on fuzzy logic procedures to model impacts and effects of interventions within the reef environment. By contrast, the marine system valuation work provides economic valuations of coral reefs, demonstrating the use of different modeling methods and treating key policy issues within this context. This publication will interest coastal zone experts and managers worldwide

While translation history, literary translation, and periodical publications have been extensively analyzed within the fields of Translation Studies, Comparative Literature, and Communication Sciences, the relationship between these three topics remains underexplored. *Literary Translation in Periodicals* argues that there is a pressing need for an analytical focus on translation in periodicals, a collaborative network of researchers, and a transnational and interdisciplinary approach. The book pursues two goals: (1) to highlight the innovative theoretical and methodological issues intrinsic to analyzing literary translation in periodical publications on a small and large scale, and (2) to contribute to a developing field by providing several case studies on translation in periodicals over a wide range of areas and periods (Europe, Latin America, and Asia in the 19th and 20th centuries) that go beyond the more traditional focus on national and European periodicals and translations. Combining qualitative and quantitative methods of analysis, as well as hermeneutical and sociological approaches, this book reviews conceptual and methodological tools and proposes innovative techniques, such as social network analysis, big data, and large-scale analysis, for tracing the history and evolution of literary translation in periodical publications.

One of the most contentious questions in contemporary literary studies is whether there should be a science of literature that can lay claim to objectivity and universality, for example by concentrating on philological criticism, by appealing to cognitive science, or by exposing the underlying media of literary communication. The present collection of essays seeks to contribute to this discussion by posing the question's historical and systematic double: has there been a science of literature, i.e. a mode of presentation and practice of reference in science that is coherent to the discourse of literature? Detailed analyses of scientific, literary and philosophical texts show that from the late 18th to the late 19th century science and

were bound to one another through an intricate web of mutual dependence and distinct incalculable difference. The Science of Literature suggests that this legacy continues to the relation between literary and scientific discourses inside and outside of academia. journal universel

Dictionnaire d'histoire, de géographie, de mythologie, et de biographie

Biology of Ticks is the most comprehensive work on tick biology and tick-borne diseases. This second edition is a multi-authored work, featuring the research and analyses of renowned experts across the globe. Spanning two volumes, the book examines the systematics, biology, structure, ecological adaptations, evolution, genomics and the molecular processes that underpin the growth, development and survival of these important disease-transmitting parasites. Also discussed is the remarkable array of diseases transmitted (or caused) by ticks, as well as modern methods for their control. This book should serve as a modern reference for students, scientists, physicians, veterinarians and other specialists. Volume I covers the biology of the tick and features chapters on tick systematics, tick life cycles, external and internal anatomy, and others dedicated to specific organ systems, specifically, the tick integument, mouthparts and digestive system, salivary glands, waste removal, salivary glands, respiratory system, circulatory system and hemolymph, fat body, the nervous and sensory systems and reproductive systems. Volume II includes chapters on the ecology of non-nidicolous and nidicolous ticks, genetics and genomics (including the genome of the Lyme disease vector *Ixodes scapularis*) and immunity, including host immune responses to tick feeding and tick-host interactions, as well as the tick's innate immune system that prevents and/or controls microbial infections. Six chapters cover in depth the many diseases caused by the major tick-borne pathogens, including tick-borne protozoa, viruses, rickettsiae of all types, other types of bacteria (e.g., the Lyme disease agent) and diseases related to tick paralytic agents and toxins. The remaining chapters are devoted to tick control using vaccines, acaricides, repellents, biocontrol, and, finally, techniques for breeding ticks in order to develop tick colonies for scientific study.

Cartes-micro-cosmo-graphiques, ou Description du corps humain

One of the most difficult issues that confronts veterinarians and staff today concerns the profession's obligation to the animal and the sometimes conflicting demands from clients, peers and society. The veterinarian's role has become more complex with new ethical challenges posed by issues such as growing public awareness regarding animal welfare, increasing economic value of companion animals, growth of veterinary specialization, experimentation with alternative and complementary medicine, and concern for pain management and mental well-being of animals.

Written by an acknowledged pioneer in veterinary ethics, An Introduction to Veterinary Medical Ethics addresses the ethical challenges that veterinarians face daily as they seek to balance obligations to animal, client, peers, society and self. The book offers a highly readable and approachable introduction to the nature of ethical theory, reasoning and decision-making, and its practical application to veterinary medicine. Now with over 100 real-life veterinary case histories and analysis, this edition also includes new discussions of animal pain, distress and happiness, ethics of critical care, alternative medicine, legal status and value of animals, and Aesculapian authority. An Introduction to Veterinary Medical Ethics: Theory and Cases, Second Edition is recommended as essential reading for all veterinary students and practitioners, as well as those interested in general animal welfare.

New edition from an acknowledged pioneer in veterinary ethics Addresses ethical challenges that veterinary medicine, with over 100 real-life cases Includes new discussion of legal status and value of animals, alternative medicine, Aesculapian authority, ethics and critical care, and animal pain, distress and happiness Ideal for veterinary students and practitioners

Community and participation have become central concepts in the nomination

processes surrounding heritage, intersecting time and again with questions of territory. In this volume, anthropologists and legal scholars from France, Germany, Italy and the USA take up questions arising from these intertwined concerns from diverse perspectives: How and by whom were these concepts interpreted and re-interpreted, and what effects did they bring forth in their implementation? What impact was wielded by these terms, and what kinds of discursive formations did they bring forth? How do actors from local to national levels interpret these new components of the heritage regime, and how do actors within heritage-granting national and international bodies work it into their cultural and political agency? What is the role of experts and expertise, and when is scholarly knowledge expertise and when is it partisan? How do bureaucratic institutions translate the imperative of participation into concrete practices? Case studies from within and without the UNESCO matrix combine with essays probing larger concerns generated by the valuation and valorization of culture.
