

## ***Lilo 114 Ala Delta Serie Verde***

When the first Disneyland opened its doors in 1955, it reinvented the American amusement park and transformed the travel, tourism and entertainment industries forever. Now a global vacation empire, the original park in Anaheim, California, has been joined by massive complexes in Florida, Tokyo, Paris, Hong Kong and Shanghai. Spanning six decades, three continents and five distinct cultures, Sabrina Mittermeier presents an interdisciplinary examination of the parks, situating them in their proper historical context and exploring the distinct cultural, social and economic landscapes that defined each one at the time of its construction. She then spotlights the central role of class in the subsequent success or failure of each venture. The first comparative study of the Disney theme parks, this book closes a significant gap in existing research and is an important new contribution to the field, providing the first discussion of the Disney parks and what they reveal about the cultures they are set in. There has been a lack of focus on cross- and trans-cultural analyses of theme parks generally and Disney theme parks specifically, until now. It is also particularly interesting – and will be welcomed for it – for the non-United States context of the study. This is a thorough examination of all of the existing Disney Parks and how they function within their respective cultures. While Disney themes and characters attempt to be universal, the author does a good job of arguing for where this is not possible and how glocalization is crucial to the parks' successes. The writing is academic, but it is not inaccessible. It will have wide disciplinary appeal within academia, as tourism studies cross into a variety of fields including history, American studies, fandom studies, performance studies and cultural studies. It will be invaluable to those working in the field of theme park scholarship and the study of Disney theme parks, theme parks in general and related areas like world's expositions and spaces of the consumer and lifestyle worlds. It will also be of interest to Disney fans, those who have visited any of the parks or are interested to know more about the parks and their cultural situation and context.

The relationship between customary land tenure and 'modern' forms of landed property has been a major political issue in the 'Spearhead' states of Melanesia since the late colonial period, and is even more pressing today, as the region is subject to its own version of what is described in the international literature as a new 'land rush' or 'land grab' in developing countries. This volume aims to test the application of one particular theoretical framework to the Melanesian version of this phenomenon, which is the framework put forward by Derek Hall, Philip Hirsch and Tania Murray Li in their 2011 book, *Powers of Exclusion: Land Dilemmas in Southeast Asia*. Since that framework emerged from studies of the agrarian transition in Southeast Asia, the key question addressed in this volume is whether 'land transformations' in Melanesia are proceeding in a similar direction, or whether they take a somewhat different form because of the particular nature of Melanesian political economies or social institutions. The contributors to this volume all deal with this question from the point of view of their own direct engagement with different aspects of the land policy process in particular countries. Aside from discussion of the agrarian transition in Melanesia, particular attention is also paid to the growing problem of land access in urban areas and the gendered nature of landed property relations in this region.

**This publication contains guidelines to sustain irrigated agriculture and protect water resources from the negative**

impacts of agricultural drainage water disposal. Using case studies from Central Asia, Egypt, India, Pakistan and the US, this study highlights four broad groups of drainage water management options and provides information to enable assessment of their impact and contribution towards development goals and to facilitate the preparation of drainage water management plans and designs. The options are: water conservation, drainage water re-use, drainage water disposal and drainage water treatment. The full texts of the case studies can be found on the attached CD-ROM.

This book is written by International experts in their field and should appeal to students and seasoned researchers, to scientists and to clinicians. No prior knowledge of the topic is required to appreciate this text and yet the book charts new territory. New perspectives are given on how our knowledge of cancer development might lead us to reconsider our clinical approach to early detection and prevention of cancer at an individual and population level.

The purpose of this study is to focus attention on the types of individuals and groups that are prone to terrorism in an effort to help improve United States counterterrorist methods and policies.

This newly revised publication provides new treatment recommendations for a comprehensive management of patients with sexually transmitted infections (STIs) in the broader context of control, prevention and care programs for STIs and HIV. The Guide covers both the syndromic approach to the management of patients with STI symptoms and the treatment of specific STIs. Also, it provides information on the notification and management of sexual partners and on STIs in children.

**This brochure provides an insight into the role and activities of the WIPO Singapore Office.**

**This Open Access book gives a comprehensive account of both the history and current achievements of molecular beam research. In 1919,**

**Otto Stern launched the revolutionary molecular beam technique. This technique made it possible to send atoms and molecules with well-defined momentum through vacuum and to measure with high accuracy the deflections they underwent when acted upon by transversal forces. These measurements revealed unforeseen quantum properties of nuclei, atoms, and molecules that became the basis for our current understanding of quantum matter. This volume shows that many key areas of modern physics and chemistry owe their beginnings to the seminal molecular beam work of Otto Stern and his school. Written by internationally recognized experts, the contributions in this volume will help experienced researchers and incoming graduate students alike to keep abreast of current developments in molecular beam research as well as to appreciate the history and evolution of this powerful method and the knowledge it reveals.**

This book discusses the political and economic history and geography of Georgia, the problems it has faced, and how it has overcome and is still overcoming them. In most countries, at the end of the 20th century the successful resolution of social-economic, political, demographic and ecological problems was largely dependent on effectively protecting the population and economic assets from natural disasters and on ensuring conditions for their sustainable development. These problems are most acute in mountainous regions like Georgia, where the unplanned development of natural ecosystems has had drastic consequences. It is therefore necessary to understand not only the probability of changing conditions (natural as well as political and demographic), but also the probability of the resulting economic losses. The book is divided into four sections; historical and political geography, geological processes, ecological processes and developmental geography. In the historical and political geography section the authors present a detailed discussion on ancient history, historical and political geography, ethnic groups and religions, demographics and socio-cultural geography. The geological processes section contains information on geology, geodynamical processes, glacial and periglacial processes. The ecological processes section examines a variety of landscapes and ecosystems, aspects of deforestation, reforestation and desertification along with anthropogenic impacts on the environment. The developmental geography section looks at different economies, natural resources, sustainable development and climate change.

Environmental Hygiene II deals with the evaluation of environmental pollutants and their relevance to human health. Main topics include mutagenic and carcinogenic activity of environmental chemicals, specific effects of heavy metals, special biological indicators for screening environmental contaminants and monitoring of indoor/outdoor air pollutants. Furthermore, assessment of exposure to environmental and occupational chemicals in man are presented as well as epidemiological studies on the health effects by environmental pollution, studies of inhalation toxicology and strategies and policy of environmental control.

Upconversion Nanophosphors

A Pop-Up Book of Friendship

Kastom, property and ideology

The Geography of Georgia

Upconversion Nanophosphors provides detailed information about various lanthanide-based upconversion nanoparticles and their application in different fields. It will also help solve fundamental and applied problems of inorganic phosphor materials showing upconversion behavior, as well as generate innovative ideas related to the application of inorganic phosphor materials. This book will prove to be an invaluable reference work for scientists, engineers, industrial experts, and masters and PhD students working in the field of upconversion and materials science. Covers the synthesis and characterization of upconversion nanophosphors and their applications Highlights which classes of upconversion materials are suitable for a specific application Explores processes to engineer upconversion nanoparticles for state-of-the-art technologies, including upconversion labelling and counterfeiting, highly sensitive and selective biosensing, and upconversion-activated drug delivery Lions and tigers and bears—oh, man! Jack and Annie have survived all kinds of dangers on their adventures in the magic tree house. Find out how you can survive lots of scary situations, including sharks, earthquakes, fires, shipwrecks, and many more! With full-color photographs and illustrations, facts about real-life survival stories, and tips from Jack and Annie, this is a must-have for all survivors of the bestselling Magic Tree House series. Have more fun with Jack and Annie on the Magic Tree House® website at [MagicTreeHouse.com](http://MagicTreeHouse.com).

Military enterprises, ostensibly set up to feed and supply soldiers, were some of the earliest and largest Burmese commercial conglomerates, established in the 1950s. Union Myanmar Economic Holdings Limited (UMEHL) and Myanmar Economic Corporation (MEC) are two profit-seeking military enterprises established by the military after the dissolution of the Burma Socialist Programme Party in 1988, which remain central players in Myanmar's post-2011 economy. Military conglomerates are a major source of off-budget revenue for the military and a main employer of retired soldiers. Yet few veterans receive more than a small piece of the profits from UMEHL. The vast bulk of formal dividends instead disproportionately benefit higher ranking officers and institutions within the Tatmadaw. Military capitalism entrenches the autonomy of the Tatmadaw from civilian oversight. Despite this, obligatory or semi-coerced contributions from active-duty soldiers are a source of cash flow for UMEHL, effectively constituting a transfer from the government budget to the military's off-budget entities. The most significant source of livelihoods support for most veterans is the service pension dispersed by the Ministry of Finance and Planning (MoPF). Despite delivering suboptimal welfare outcomes for most soldiers and veterans while eroding the legitimacy of ceasefires, successive governments since 1988, including Aung San Suu Kyi's National League for Democracy (NLD) administration, have entrenched military capitalism by encouraging commercial activities of armed groups that enter into ceasefire agreements. Extending military pensions already paid by the Ministry of Planning and Finance to retired members of armed groups could deliver a far more consistent and tangible "peace dividend" than the commercial extraction of resources from ceasefire areas. More balanced civil-military relations, and fairer social outcomes for military personnel, will rely on civilian-led state institutions delivering effective and substantive welfare support beyond the commercially oriented welfare arrangements of military conglomerates.

*The creation of new lexical units and patterns has been studied in different research frameworks, focusing on either system-internal or system-external aspects, from which no comprehensive view has emerged. The volume aims to fill this gap by studying dynamic processes in the lexicon – understood in a wide sense as not being necessarily limited to the word level – by bringing together approaches directed to morphological productivity as well as approaches analyzing general types of lexical innovation and the role of discourse-related factors. The papers deal with ongoing changes as well as with historical processes of change in different languages and reflect on patterns and specific subtypes of lexical innovation as well as on their external conditions and the speakers' motivations for innovating. Moreover, the diffusion and conventionalization of innovations will be addressed. In this way, the volume contributes to understanding the complex interplay of structural, cognitive and functional factors in the lexicon as a highly dynamic domain.*

This book gathers contributions to the 20th biannual symposium of the German Aerospace Aerodynamics Association (STAB) and the German Society for Aeronautics and Astronautics (DGLR). The individual chapters reflect ongoing research conducted by the STAB members in the field of numerical and experimental fluid mechanics and aerodynamics, mainly for (but not limited to) aerospace applications, and cover both nationally and EC-funded projects. Special emphasis is given to collaborative research projects conducted by German scientists and engineers from universities, research-establishments and industries. By addressing a number of cutting-edge applications, together with the relevant physical and mathematics fundamentals, the book provides readers with a comprehensive overview of the current research work in the field. Though the book's primary emphasis is on the aerospace context, it also addresses further important applications, e.g. in ground transportation and energy.

Developed from a first-year graduate course in algebraic topology, this text is an informal introduction to some of the main ideas of contemporary homotopy and cohomology theory. The materials are structured around four core areas: de Rham theory, the Čech-de Rham complex, spectral sequences, and characteristic classes. By using the de Rham theory of differential forms as a prototype of cohomology,

the machineries of algebraic topology are made easier to assimilate. With its stress on concreteness, motivation, and readability, this book is equally suitable for self-study and as a one-semester course in topology.

Land transformations in Melanesia

Living with Water
