"As someone who has been teaching a course on space exploration for many years and has visited most of NASA's space centers, I have found plenty of new and valuable material in *To a Distant Day*. . . . I recommend the book to all who wish to know more about the conditions, people, and discoveries between 1890 and 1960 that led to the space age."--Pangratios Papacosta, *Physics Today* Although the dream of flying is as old as the human imagination, the notion of rocketing into space may have originated with Chinese

gunpowder experiments during the Middle Ages. Rockets as both weapons and entertainment are examined in this engaging history of how human beings acquired the ability to catapult themselves into space. Chris Gainor's irresistible narrative introduces us to pioneers such as Konstantin Tsiolkovsky, Robert Goddard, and Hermann Oberth, who pointed the way to the cosmos by generating the earliest wave of international enthusiasm for space exploration. It shows us German engineer Wernher von Braun creating the V-2, the first large rocket, which, though opening the door to space, failed utterly as the "wonder weapon" it was meant to be. From there Gainor follows the space race to the Soviet Union and the United States, giving us a close look at the competitive hysteria that

led to Sputnik, satellites, space probes, and--finally--human flight into space in 1961. As much a story of cultural ambition and personal destiny as of scientific progress and technological history, *To a Distant Day* offers a complete and thoroughly compelling account of humanity's determined efforts--sometimes poignant, sometimes amazing, sometimes mad--to leave the earth behind.

With many of the most important new military systems of the past decade produced by small firms that won competitive government contracts, defense-industry consultant James Hasik argues in *Arms and Innovation* that small firms have a number of advantages relative to their bigger competitors. Such firms are marked by an entrepreneurial spirit and fewer

bureaucratic obstacles, and thus can both be more responsive to changes in the environment and more strategic in their planning. This is demonstrated, Hasik shows, by such innovation in military technologies as those that protect troops from roadside bombs in Iraq and the Predator drones that fly over active war zones and that are crucial to our new war on terror. For all their advantages, small firms also face significant challenges in access to capital and customers. To overcome such problems, they can form alliances either with each other or with larger companies. Hasik traces the trade-offs of such alliances and provides crucial insight into their promises and pitfalls. This ground-breaking study is a significant contribution to understanding both

entrepreneurship and alliances, two crucial factors in business generally. It will be of interest to readers in the defense sector as well as the wider business community.

It is the product of a lifetime of watching and investigating the way flight happens.

contemporary mainstream Hollywood movies - "Blue Velvet, Wall Street, Crimes and Misdemeanors, When Harry Met Sally, Sex Lies and Videotape, Do the Right Thing "- Norman Denzin explores the tension between ideas of the postmodern, and traditional ways of analyzing society. The discussion moves between two forms of text: social theory and cinematic representations of contemporary life. Denzin analyzes the ideas of society embedded in poststructuralism, postmodernism, feminism, cultural studies and Marxism

through the ideas of key theorists like Baudrillard, Barthes, Habermas, Jameson, Bourdieu and Derrida. He relates these to the problematic of the postmodern self as exposed in cinema centering on the decisive performance of race, gender and class.

versatility, it was powered by a piston engine and a propeller, yet came tantalisingly close to breaking the sound barrier. First flown in 1936, the Spitfire soon came to symbolize Britain's defiance of Nazi Germany in the summer of 1940. Spitfire: The Biography is a celebration of a great British invention, of the men and women who flew it and supported its development, and of the industry that manufactured both the aircraft and the Rolls-Royce engines that powered it. It is also about the ways in which the sight,

In a collection of dialogues and narratives, the author of "Robinson Crusoe" illustrates his views on religion, morality, the relation of master and servant, child rearing, and related topics.

The genocide of Armenians by Turks during the First World War was one of the most horrendous deeds of modern times and a precursor of the genocidal acts that have marked the rest of the twentieth century. Despite the worldwide attention the atrocities received at the time, the massacre has not remained part of the world's historical consciousness. The parallels between the Jewish and Armenian situations and the reactions of the Jewish community in Palestine (the Yishuv) to the Armenian genocide, which was muted and largely self-interested, are explored by Yair Auron. In attempting to assess

and interpret these disparate reactions, Auron maintains a fairminded balance in assessing claims of altruism and self-interest, expressed in universal, not merely Jewish, terms. While not denying the uniqueness of the Holocaust, Auron carefully distinguishes it from the Armenian genocide reviewing existing theories and relating Armenian and Jewish experience to ongoing issues of politics and identity. As a groundbreaking work of comparative history, this volume will be read by Armenian area specialists, historians of Zionism and Israel, and students of genocide. Yair Auron is senior lecturer at The Open University of Israel and the Kibbutzim College of Education. He is the author, in Hebrew, of *Jewish-Israeli Identity, Sensitivity to World Suffering: Genocide in the Twentieth Century, We Are All German Jews, and Jewish Radicals in France during*

communist militant in the Italian Resistance against fascism during World War Two, Rossanda rose rapidly in its aftermath, becoming editor of the Communist Party weekly paper and a member of parliament. Initially a party loyalist, she was critical of the party's conservatism in the face of new radical movements and moved into opposition during the late 1960s. The breach widened after she and others publicly opposed the Soviet invasion of Czechoslovakia, and were expelled in 1969. She went on to help found the influential paper il manifesto, which remains the most critical daily in

She paints a revealing picture of fascism, communism, post-war reconstruction and the revolts that shook Europe in the 1960s. In The Comrade from Milan, one of the most influential intellectuals of the European Left relives the storms of the twentieth century. Both cool-headed and precise, Rossanda provides a rare insight into what it once meant to be politically engaged.

The thrilling story of the top scoring Allied fighter pilot of World War II 'Johnnie' Johnson, who served with Fighter Command squadrons throughout the war, scoring his 38th and final victory in September 1944. From the moment the author joins his first operational Spitfire squadron in August 1940, the reader is taken on an epic journey through the great aerial fighter actions of the war including the Battle of

Britain, sweeps across the Channel and over France, Dieppe and Normandy; and finally, operations across the Rhine and into Germany itself.

In the years that followed World War II, hundreds of books were written about different aspects of that unprecedented conflict, but the details of the "secret war" in the West were slow to appear, in large part because of agreements concluded in 1945 between the American and British governments that forbade

the release of information on covert operations, especially in the field of cryptanalysis, that is, the interception and decrypting of enemy radio communications. A curtain of silence thus descended on that vital phase of the Allied struggle against the European Axis. From the point of view of Germany's clandestine war effort, the situation was slightly different because the Reich had lost the war; even so, the archives of the Abwehr, as the

Amt/Ausland of the Oberkommando der Wehrmacht, or Foreign Department of the Armed Forces High Command, was known, could not be located, and it was logically assumed that the Germans had destroyed them before the war ended.

During the Second World War the air forces and pilots of the countries allied to Germany played a greater role than hitherto conceded by historians. In this book, Hans Werner Neulen has gathered an enormous amount of information on

Their operations, mostly carried out in conditions of numerical inferiority, their successes and failures, as well as the motivation of the aircrew and their often tragic fate are all incorporated into this comprehensive account.

This book introduces novel thinking and techniques to the control of robotic manipulation. In particular, the concept of teleimpedance control as an alternative method

to bilateral force-reflecting teleoperation control for robotic manipulation is introduced. In teleimpedance control, a compound reference command is sent to the slave robot including both the desired motion trajectory and impedance profile, which are then realized by the remote controller. This concept forms a basis for the development of the controllers for a robotic arm, a dual-arm setup, a synergy-driven robotic hand, and a compliant exoskeleton for improved interaction performance.

Initially flying Italian-supplied Fiat G.50s, the Croat forces suffered heavy losses during 1942 whilst flying alongside JG 52 in the southern sector of the Russian front. Despite this, a significant number of kills fell to future aces such as Cvitan Galic and Mato Dubovak during this time, and when the units re-equipped with Bf 109G-10s in 1943, battle-seasoned Croat pilots started to rack up impressive scores. December 9th, that date is important because on that day, in 1951, it made the first flight G.80, the first Italian jet trainer. Although produced in Turin the historical flight happened to Amendola, military airport where the prototype was transported from Turin. The choice was obligatory because the Turin track was not long enough to guarantee operations with the new FIAT airplane. The history of the G.80, and of the subsequent improved version, the G.82, deserve to be known. The fifties, in Italy, were the
