## ***Indo-Naga Conflict***

"This book aims to compile some of the important results from the latest research in climate variation and prediction studies with a focus on the role of the ocean, particularly in the Indo-Pacific region. Several new modes of ocean-atmosphere climate variations have been discovered in the last decade, and the advance of climate models have made it possible to predict some of these

# File Type PDF Ma C Naga Res En Chaleur

modes several seasons ahead. This has improved the society's ability to use model predictions to mitigate climate disaster risks. Leading experts in the field were invited to contribute to this book in order to compile a comprehensive review for the benefit of researchers as well as general readers interested in the subject."--

This book is a printed edition of the Special Issue "Antibacterial

A Comparative Study

Acute Heart Failure

***The increasing mean age of the population in developed countries has turned out to be an economic and social problem. Cardiovascular disease has long been considered to be age related in terms of their onset and progression. As such, we can say that the increase in life expectancy goes in parallel with increased incidence of cardiovascular disease. With age, a number of changes***

***occur in the vasculature altering the homeostasis of the irrigated organs promoting target organ damage. While different adaptive mechanisms to protect vessels against mild stress have been described, the aging process induces a progressive failure of protective mechanisms, leading to vascular changes and higher susceptibility to cardiovascular diseases. Indeed, vascular aging is exacerbated by coexisting cardiovascular risk factors, such as hypertension, metabolic syndrome and diabetes. Compelling evidence***

***indicates that diminished endothelial relaxation and increase, decrease, or no change in contractile responses to several agonists is associated with aging. There is an increase of vasoconstrictor factors expression and a decrease of vasodilators. Morphologic changes include lumen diameter enlargement, wall thickening and alterations of matrix substances as increased collagen or decreased elastin deposition, ultimately leading to greater arterial stiffening (reduced compliance). Importantly,***

***arterial stiffness is an independent predictor of cardiovascular morbidity and mortality. Cellular and molecular mechanisms have also been documented. Senescence at the cellular level involves alterations in Ca<sup>2+</sup> signaling and down regulation of anti-aging proteins. Both endothelial and smooth muscle cells change their number, morphology, function and their regenerative ability. Aging is also associated with a gradual loss of antioxidant defense mechanisms, a proinflammatory shift in the***

***cytokine expression profile and a production of reactive oxygen species such as superoxide (O<sub>2</sub><sup>-</sup>) that promotes the breakdown of nitric oxide. Nitric oxide and O<sub>2</sub><sup>-</sup> interact to form peroxynitrite known to nitrosylate proteins affecting their physiological function. However, vascular wall proteins may also suffer from other potentially deleterious modifications as glycation (Maillard reaction) and glyco-oxidative reactions with increasing age, which could be linked to the age-associated changes in***

***vascular function. Various strategies have shown benefit in preventing, delaying or attenuating vascular aging. For instance, a healthy lifestyle including low fat diet and/or exercise have a favorable effect. Nevertheless, it yet remains to be fully demonstrated whether vascular aging can be pharmacologically prevented. This Research Topic is intended to bring together research efforts to understand the causes and consequences of vascular aging and propose new therapeutic strategies for the management of vascular***

**senescence.**

***The main objective of Cardiac Remodeling: Molecular Mechanisms is to summarize the major research advances in molecular, biochemical and translational aspects of cardiac remodeling over the last 2 to 3 decades under one cover and touch on future directions. It provides a high profile and valuable publication resource on molecular mechanisms of cardiac remodeling for both the present and future generations of researchers, teachers, students and trainees. This book should***

***stimulate future translational research targeted towards discovery and development for preventing, limiting and reversing bad remodeling over the next few decades, with the ultimate goal of preventing progression to systolic and/or diastolic heart failure. The chapters suggest potential novel strategies that should receive attention for translating basic research knowledge to application in patients at the bedside. The series Advances in Polymer Science presents critical reviews of the present and future trends in polymer***

***and biopolymer science. It covers all areas of research in polymer and biopolymer science including chemistry, physical chemistry, physics, material science. The thematic volumes are addressed to scientists, whether at universities or in industry, who wish to keep abreast of the important advances in the covered topics. Advances in Polymer Science enjoys a longstanding tradition and good reputation in its community. Each volume is dedicated to a current topic and each review critically surveys one aspect of that***

***topic, to place it within the context of the volume. The volumes typically summarize the significant developments of the last 5 to 10 years and discuss them critically, presenting selected examples, explaining and illustrating the important principles and bringing together many important references of primary literature. On that basis, future research directions in the area can be discussed. Advances in Polymer Science volumes thus are important references for every polymer scientist, as well as for other scientists***

***interested in polymer science as an introduction to a neighboring field or as a compilation of detailed information for the specialist. Review articles for the individual volumes are invited by the volume editors. Single contributions can be specially commissioned. Readership: Polymer scientists or scientists in related fields interested in polymer and biopolymer science, at universities or in industry, graduate students. Animal Models for the Study of Human Disease identifies important animal models and assesses the advantages and disadvantages of each model for the study of human disease.

The first section addresses how to locate resources, animal alternatives,

## File Type PDF Ma C Naga Res En Chaleur

animal ethics and related issues, much needed information for researchers across the biological sciences and biomedicine. The next sections of the work offers models for disease-oriented topics, including cardiac and pulmonary diseases, aging, infectious diseases, obesity, diabetes, neurological diseases, joint diseases, visual disorders, cancer, hypertension, genetic diseases, and diseases of abuse. Organized by disease orientation for ease of searchability Provides information on locating resources, animal alternatives and animal ethics Covers a broad range of animal models used in research for human disease

Northeast India has witnessed several nationality movements during the 20th century. The oldest and one of the most formidable has been that of

## File Type PDF Ma C Naga Res En Chaleur

the Nagas — inhabiting the hill tracts between the Brahmaputra river in India and the Chindwin river in Burma (now Myanmar). Rallying behind the slogan, ‘ Nagaland for Christ ’ , this movement has been the site of an ambiguous relation between a particular understanding of Christianity and nation-making. This book, based on meticulous archival research, traces the making of this relation and offers fresh perspectives on the workings of religion in the formation of political and cultural identities among the Nagas. It tracks the transmutations of Protestantism from the United States to the hill tracts of Northeast India, and its impact on the form and content of the nation that was imagined and longed for by the Nagas. The volume also examines the role of missionaries,

## File Type PDF Ma C Naga Res En Chaleur

local church leaders, and colonial and post-colonial states in facilitating this process. Lucidly written and rigorous in its analyses, this book will be of interest to scholars and researchers of South Asian history, religion, political science, sociology and social anthropology, and particularly those concerned with Northeast India.

Organophosphorus Chemistry presents a groundbreaking resource in this branch of organic chemistry that demonstrates how phosphorus-containing compounds can be manipulated in a variety of organic reactions. The authors give an overview of the newest trends and synthesis strategies, introduce bioactive and environmentally friendly organophosphorus compounds and show their importance in mainstream organic chemistry.

Constructing the Divine

Webster's Collegiate Dictionary

The term "progress" is a modern Western notion that life is always improving and advancing toward an ideal state. It is a vital modern concept which underlies geographic explorations and scientific and technological inventions as well as the desire to harness nature in order to increase human beings' ease and comfort. With the advent of Western colonization and to the great detriment of the colonized, the notion of progress began to perniciously and pervasively permeate across cultures. This book

## File Type PDF Ma C Naga Res En Chaleur

details the impact of the notion of progress on the Nagas and their culture. The interaction between the Nagas and the West, beginning with British military conquest and followed by American missionary intrusion, has resulted in the gradual demise of Naga culture. It is almost a cliché to assert that since the colonial contact, the long evolved Naga traditional values are being replaced by Western values. Consequences are still being felt in the lack of sense of direction and confusion among the Nagas today. Just like other Indigenous Peoples, whose history is characterized by traumatic cultural turmoil because of colonial interference, the Nagas have long been engaged in self-shame, self-negation and self-sabotage.

The Special Issue on Advances in Modeling and Management of Urban Water Networks (UWNs) explores four important topics of research in the context of UWNs: asset management, modeling of demand and hydraulics, energy recovery, and pipe burst identification and leakage reduction. In the first topic, the multi-objective optimization of interventions on the network is presented to find trade-off solutions between costs and efficiency. In the second topic, methodologies are presented to simulate and predict demand and to simulate network behavior in emergency scenarios. In the third topic, a methodology is presented for the multi-objective optimization of pump-as-turbine (PAT) installation sites in transmission mains.

In the fourth topic, methodologies for pipe burst identification and leakage reduction are presented. As for the urban drainage systems (UDSs), the two explored topics are asset management, with a system upgrade to reduce flooding, and modeling of flow and water quality, with analyses on the transition from surface to pressurized flow, impact of water use reduction on the operation of UDSs, and sediment transport in pressurized pipes. The Special Issue also includes one paper dealing with the hydraulic modeling of an urban river with a complex cross-section.

For many years, there has been a great deal of work done on chronic congestive heart failure while acute heart failure has been considered a

difficult to handle and hopeless syndrome. However, in recent years acute heart failure has become a growing area of study and this is the first book to cover extensively the diagnosis and management of this complex condition. The book reflects the considerable amounts of new data reported and many new concepts which have been proposed in the last 3-4 years looking at the epidemiology, diagnostic and treatment of acute heart failure.

**This volume of Current Topics in Membranes focuses on adrenergic receptor biology, beginning with a review of past successes and historical perspectives then further discussing current general trends in adrenergic receptor studies in various contexts. This publication also includes discussions of the role and relationship of adrenergic receptors to different systems and**

**diseases, establishing  
adrenergic receptor  
biology as a needed,  
practical reference for  
researchers.**

**Namrata Goswami's  
research on the Naga  
armed ethnic movement  
offers a compelling  
narrative on how  
conflict has affected  
the daily lives of the  
Nagas. This volume is an  
account of the Naga  
ethnic movement going on  
in India since 1918,  
covering both historical  
and contemporary aspects  
of the conflict. Based**

on over a decade of ethnographic work among the Naga rebels and movement zones, personal interviews, and secondary data, the author offers insights into how the Naga population perceives their meeting point with the institutions of the Indian state, especially the army and the paramilitary. The book documents what it is like, to live in a conflict zone and the restraints and thought processes that it

**cultivates especially among the youth. The book reveals gripping stories of tremendous courage and conviction from people who have thought about the political unrest, been born into it, taken part in it, or have been affected by it. The Naga Ethnic Movement for a Separate Homeland reflects the Nagas' love for their land, tracing the poignant mix of nature, land, identity, emotions, culture as well as the inter-ethnic**

differences that exacerbate the conflict. From being characterized as 'primitive tribe' in the colonial imagination to become predominantly practitioners of the American Baptist faith, the Sumi Naga – formerly known as the Sema Naga – in the North-East Indian state of Nagaland have come a long way ever since this Naga tribe encountered the white man toward the latter half of the nineteenth century. This book in a way chronicles the

transition of Sumi society from the period of colonial contact up to the present-day context. A critical understanding of Sumi society and culture is at the heart of the narrative, and the analysis of Sumi religion and world view remains the main thrust of this book. It is argued that the Sumi, who are overwhelmingly Baptists, are faced with new religious issues which has brought about not only schismatic

divisions but also rendering ebullience to religious life, and that a new discourse has emerged in Sumi religion. The author positions himself as an 'insider', and in doing so has given a reflexive account of Sumi religious life, meanwhile substantiating the arguments and findings in the light of contemporary theoretical developments. The volume brings out compelling evidence that religion significantly shapes the

daily life of the Sumi.  
It offers a detailed  
ethnographic study of  
Sumi religion and world  
view, as the Sumi Naga  
was seldom studied in-  
depth in the post-  
Independence period.

the various aspects of**

the regulation of the cardiovascular system's function and physiology by the adrenergic neurohormonal system, i.e. the catecholamines norepinephrine and epinephrine. Although there are several books describing the adrenergic system's biology, physiology and pharmacology, and also several excellent books on cardiovascular physiology and pathology, this book focuses exclusively on the interface of these

two areas:  
cardiovascular  
regulation by the  
adrenergic system and  
how it affects  
cardiovascular diseases  
and their treatments.  
Each chapter describe  
the roles of the  
adrenergic system first  
in each cardiovascular  
cell type (cell type-by-  
cell type) and then in  
specific areas of  
cardiovascular  
physiology, such as in  
exercise and in  
cardiovascular  
metabolism. Finally, the

book concludes with a chapter on the adrenergic system's role in the currently very "hot" (in terms of scientific investigations) area of cardiovascular stem cell biology. The book covers the adrenergic system—specifically and exclusively in the heart and vessels. It is formatted by cardiovascular cell type-by-cell type manner, rather than in an organ-by-organ or in a disease-by-disease manner, as

usually discussed in standard, conventional biomedical textbooks. The book also discusses the adrenergic system in novel, cutting-edge cardiovascular research areas, in which it has not been covered well so far (e.g. stem cells, exercise). These three areas constitute the most important assets of the book, which sets it apart from others in the field.

This book analyses and compares ceasefire agreements as part of

peace processes in intrastate armed conflicts. Research repeatedly underscores the importance of ceasefire agreements in peace processes but suggests that they can influence such processes in fundamentally different ways. However, despite contradictory expectations, remarkably few studies have so far been devoted to systematic and in-depth analysis of ceasefire agreements in contemporary intrastate

armed conflicts. This book contributes to filling this gap by using a process-oriented conflict dynamics approach to analyse and explain how ceasefire agreements are being influenced by and in turn influences the broader dynamics of peace processes. Empirically, the book focuses on the armed conflicts in Aceh (Indonesia) and Sri Lanka. Based on document studies and 57 interviews with key

actors, it presents comparative insights and in-depth knowledge about ceasefire agreements in different contextual settings. The book problematizes the common assumption in the literature that ceasefire agreements create momentum in peace processes and pave the way to peace, and it provides a more nuanced analysis and understanding based on two empirical cases analysed within a comparative framework.

In contrast to conventional wisdom, it demonstrates how ceasefires on the contrary also can have negative implications on peace processes. This book will be of much interest to students of conflict resolution, peace studies, intra-state conflict, security studies and IR in general.

MiRNAs in Aging and Cancer, Volume 334, the latest in the International Review of Cell and Molecular

Biology series, reviews and details current advances in cell and molecular biology. This new release includes chapters on a variety of timely topics, including the Regulation of autophagy by miRNAs, the Impact of miRNAs in cellular senescence, miRNAs in hematopoiesis, stem cell biology and hematological disorders, the Impact of miRNAs on longevity, miRNA deregulation in cardiovascular aging and associated disorders,

miRNA deregulation in aging-associated pathologies of the skeletal muscle, and miRNAs and neurodegeneration. The IRCMB series has a worldwide readership, maintaining a high standard by publishing invited articles on important and timely topics that are authored by prominent cell and molecular biologists. The articles published in IRCMB have a high impact and an average cited half-life of 9

years. This great resource ranks high amongst scientific journals dealing with cell biology. Publishes only invited review articles on selected topics Authored by established and active cell and molecular biologists Offers a wide range of perspectives on specific subjects
