During the past five

File Type PDF
Management 480
California State

University
Fullerton

decades, we have witnessed a tremendous evolution in water resource system management. Three characteristics of this evolution are of particular note: First, the application of the systems approach to complex water management problems has been established as one of the most important advances

File Type PDF
Management 480

California State
University
in the field of water
resource management.

Second, the past five
decades have brought a
remarkable
transformation of
attitude in the water
resource management
community towards
environmental concerns
and action to address
these concerns. Third,
applying the principles of
sustainability to water

California State
University
Fullerton

resource decision-making requires major changes in the objectives on which decisions are based, and an understanding of the complicated inter-relationships between existing ecological, economic, and social factors. The Special Issue includes 15 contributions that offer insights into contemporary problems,

California State
University
Fullerton

approaches, and issues related to the management of complex water resources systems. It will be presumptuous to say that these 15 contributions characterize the success or failure of the systems approach to support water resources decision-making. However, these contributions offer interesting lessons from
