This textbook presents concepts and applications of Management Accounting, one of the main approaches used by management to support future organisational performance. It covers methods and instruments of management and cost accounting, cost management, and management control and is based on the German textbook "Interne Unternehmensrechnung" by Ralf Ewert and Alfred Wagenhofer (Springer). The authors describe the managerial uses of accounting information, both for decision-making and decision-influencing, and provide a broad perspective on the subject combining the academic foundations of the field with recent cutting-edge research results. Moreover, traditions of German accounting theory and practice that are little known outside of the German-speaking countries are reflected in the book. With its unique approach based on information economics, the textbook offers a comprehensive and innovative presentation to a global audience.

Standard costing is the foundation upon which much management accounting and budgetary practice rests, yet it is often misunderstood. In this book Colin Drury sets out the nature and scope of standard costing whilst clearly identifying its limitations. The calculation and interpretation of the full range of cost accounting variances is covered, together with the formal analysis of the decision to investigate variances. The way in which standard costing information is recorded in the accounts is also dealt with in depth, as this step is essential to a full appreciation of the role of standard costing. Finally, the usefulness of traditional standard costing techniques in a modern production environment is assessed.
