Treatment of the Neurologically Impaired Adult With the present book, acclaimed international Bobath instructor and therapist Bente Gjelsvik offers an evidence-based practice-oriented road map to the assessment and treatment of patients with lesions of the central nervous system. Consisting of 238 pages of accessible text supported by 240 illustrations (mostly photographs of patients in therapy), this work is the ideal clinical guide for physical and occupational therapists, for students and practitioners working with neurologically impaired adults, and for Bobath instructors as well as trainers in physiotherapy in general. Gjelsvik successfully bridges the gap between evidence-based clinical practice and theoretical assumptions, developing a clear understanding of the neuromusculoskeletal system, of motor control, of neural and muscle plasticity, and ultimately of the structure and function of the organism as a whole. The fine balance between theoretical information, clinical relevance, and practical examples make this an essential book for learning all about the interaction between the central nervous system, the musculoskeletal system, movement, and function. Bente Gjelsvik thus improves any Bobath therapist's competency in achieving the best possible assessment of the individual with neurological conditions, for best possible results of the treatment.

Step by Step to Proficiency in Diagnostic Ultrasound This workbook is divided into lessons that guide you—like an instructor in an ultrasound course—systematically through the individual organ systems and body regions. Key features of the fourth edition: Special multiple-exposure photos demonstrate the dynamics of handling the transducer Triplet-image units vividly illustrate transducer positioning, the ultrasound image, and relevant anatomy Reference numbers on the accompanying diagrams help you to both actively develop your knowledge and to test it at any time. The legend located on the back cover flap is the key to the reference numbers that are used consistently in each diagram. Quiz images at the end of each chapter are the perfect tool for rigorous self-evaluation Physical fundamentals are presented in vibrant, illustrative diagrams Numerous practical tips and tricks make it easy to familiarize yourself with ultrasound A primer on ultrasound interpretation explains specialized terminology concisely and clearly Precise descriptions of algorithms for transducer positioning facilitate real-time examinations Videos (online access) showing relevant ultrasound anatomy, optimal transducer positioning, and the images you will see on the monitor during examination let you experience the content live—a perfect complement to the book that will greatly improve your retention of the material.

The idea of the book “Science and Conservation for Museum Collections” was born as a result of the experience made by CNR-ISTEC (Faenza) in the implementation of a course for Syrian restorers at the National Museum in Damascus. The book takes into consideration archaeological artefacts made out of the most common materials, like stones (both natural and artificial), mosaics, ceramics, glass, metals, wood and textiles, together with less diffuse artefacts and materials, like clay tablets, goldsmith artefacts, icons, leather and skin objects, bones and ivory, coral and mother of pearl. Each type of material is treated from four different points of view: composition and processing technology; alteration and degradation causes and mechanisms; procedures for conservative intervention; case studies and/or examples of conservation and restoration. Due to the high number of materials and to the great difference between their conservation problems, all the subjects are treated in a schematic, but precise and complete way. The book is mainly addressed to students, young restorers, conservators and conservation scientists all around the world. But the book can be usefully read by expert professionals too, because nobody can know everything and the experts often need to learn something of the materials not included in their specific knowledge. Twenty- two experts in very different fields of activity contributed with their experience for obtaining a good product. All they are Italian experts, or working in Italy, so that the book can be seen as an exemplification on how the conservation problem of Cultural Heritage is received and tackled in Italy.
