This joint report by the International Energy Agency (IEA) and the OECD Nuclear Energy Agency (NEA) is the seventh in a series of studies on electricity generating costs. It presents the latest data available for a wide variety of fuels and technologies.

This textbook contains the lecture series originally delivered at the "Advanced Course on Limit Cycles of Differential Equations" in the Centre de Recherche Mathematica Barcelona in 2006. It covers the center-focus problem for polynomial vector fields and the application of abelian integrals to limit cycle bifurcations. Both topics are related to the authors' interests in Hilbert's sixteenth problem, but would also be of interest to those working more generally in the qualitative theory of dynamical systems.

Sorption Enhancement of Chemical Processes, Volume 51 compiles the latest, state-of-the-art progress in the area of sorption enhanced processes. Topics in this updated volume include Sorption-enhanced water-gas-shift and steam methane reforming, CO₂ sorbents for sorption enhanced steam reforming, Reactor design for Sorption Enhanced Reforming using Ca-Cu chemical loops, Sorption-enhanced reaction with Simulated Moving Bed reactor (SMBR) and PermSMBR technologies, and the Process design and Technoeconomic assessment of sorption enhanced systems. This series contains contributions from leading scientists on the topics presented, providing tactics on a multiscale approach, from materials, to reactor, to process design. Contains reviews by leading authorities in their respective areas Presents up-to-date reviews of sorption enhancement of chemical processes Includes a broad mix of U.S. and European authors, as well as academic, industrial and research institute perspectives

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

These compelling, moving stories dramatize the dilemmas of people who have stayed away from home too long, probing the question of how to act and interact in a world of incessantly shifting cultural boundaries. North of Tourism is about travellers who have broken free of boundaries, crossing the line from tourism to committed participation in societies in which they remain outsiders: an adventurous elderly Frenchwoman in Brazil, a dangerously solitary young human-rights worker in Guatemala, expatriates in Spain, uprooted Canadian in England, a Toronto family splintered by its move to rural Ontario, Westerners adrift in the former Soviet Union and in the closing novella, a diplomat from Luxembourg struggling to salvage meaning from his scandal-shattered life as the First World War engulfs Montenegro and Serbia—all ride the tides of a world where all nations appear alluringly open, yet each continues to enforce the codes of its own history.

This special volume of Progress in Molecular Biology and Translational Science provides a current overview of how memory is processed in the brain. A broad range of topics are presented by leaders in the field, ranging from brain circuitry to synaptic plasticity to the molecular machinery that contributes to the brain's ability to maintain information across time. Memory systems in the prefrontal cortex, hippocampus and amygdala are considered as well. In addition, the volume covers recent contributions to our understanding of memory from in vivo imaging, optogenetic, electrophysiological, biochemical and molecular biological studies. Articles from world renowned experts in memory Covering topics from signaling, epigenetic, RNA translation to plasticity Methodological approaches include molecular and cellular, behavioral, electrophysiological, optogenetic and functional imaging

The Rise of Nationalism in New Caledonia

This Guide is primarily intended for applicants and holders of international registrations of marks, as well as officials of the competent

administrations of the Member States of the Madrid Union. It leads them through the various steps of the international registration procedure and explains the essential provisions of the Madrid Agreement, the Madrid Protocol and the Common Regulations.

The collection of twenty-seven papers published has been grouped into six major categories : corrosion process characterization and modeling, applications of Kramers-Kronig transformations for evaluating the validity of data, corrosion and its inhibition by either corrosion products of specially added inhibitors, corrosion of aluminum and aluminum alloys, corrosion of steel in soils and concrete, and evaluation of coatings on metal substrates.

Drawing upon field studies conducted in 1978, 1980 and 2001 with the Oksapmin, a remote Papua New Guinea group, Geoffrey B. Saxe traces the emergence of new forms of numerical representations and ideas in the social history of the community. In traditional life, the Oksapmin used a counting system that makes use of twenty-seven parts of the body; there is no evidence that the group used arithmetic in prehistory. As practices of economic exchange and schooling have shifted, children and adults unwittingly reproduced and altered the system in order to solve new kinds of numerical and arithmetical problems, a process that has led to new forms of collective representations in the community. While Dr Saxe's focus is on the Oksapmin, the insights and general framework he provides are useful for understanding shifting representational forms and emerging cognitive functions in any human community.

Broadband Services

Analysis and Interpretation

Access to the Internet is an increasing problem in many areas of the world. As the popularity and usefulness of the Internet increases on a daily basis, lack of access to the technology is putting many groups at a disadvantage in terms of better education, better jobs and even in terms of higher levels of civic participation. However, creating a network infrastructure to serve outlying communities and sectors of the population is not straight-forward. This book brings together all the aspects of the problem – technical, regulatory and economic - into one volume to provide a comprehensive resource. It describes the latest technological advances that allow cost-effective network infrastructures to be built, and places them in the context of the applications and services that the infrastructure will deliver. A section on business models and case studies from North American and Europe demonstrate that the solutions are economically and practically viable. This book is essential for anyone looking to gain an understanding of the issues and technology surrounding the access debate. It will be of particular relevance to network engineers/designers/planners at the incumbent operator companies charged with delivering broadband access to as yet unconnected regions. Governments and regulatory bodies will also find this a useful guide to the problems that they may face.

Includes Cicero's De inventione and Latini's commentary.

Coins were the most deliberate of all symbols of public communal identities, yet the Roman historian will look in vain for any good introduction to, or systematic treatment of, the subject. Sixteen leading international scholars have sought to address this need by producing this authoritative collection of essays, which ranges over the whole Roman world from Britain to Egypt, from 200 BC to AD 300. The subject is approached through surveys of the broad geographical and chronological structure of the evidence, through chapters which focus on ways of expressing identity, and through regional studies which place the numismatic evidence in local context.

This is the second edition of a work which offers comprehensive coverage of the relevant UK and European Community law with a critical analysis of that law. The book,unusually, deals in detail with Northern Irelands fair employment legislation as well as the law relating to sex, race and disability discrimination and equal pay. Structured so as to be accessible to the student approaching discrimination law for the first time, the book is sufficiently detailed and analytical to appeal to the well-informed reader, and to provide those engaged in research with a solid base for further independent study. For the undergraduate student studying discrimination law as a free-standing subject or as part of a wider course, the book provides a one stop shop; for the postgraduate student, too, it provides a challenging core text for any discrimination law course.

Montgomery explores the roles that translation has played in the development of Western science from antiquity to the end of the 20th century. He presents case histories of science in translation from a variety of disciplines & cultural contexts.

'A furiously paced, compulsive thriller' The Times Ned Allen is young, smart, and upwardly mobile. Several years into his career as an ad salesman for a successful computer magazine, Ned's finally left his small-town roots behind, and is certain that the sophisticated Manhattan world he covets is his forever. His wife Lizzie is also a rising star of a prestigious PR firm. It seems that Ned's made it. But then what appeared to be a career break shows its true colours. Ned's forced to make some tough calls, among them a question of ethics and the small matter of whether to

lie to his wife - and when the tough calls just keep getting tougher he finds himself on the brink of losing everything ... Readers say: 'Classic Kennedy. Brilliant plot, wonderful dialogue and characters. You are bowled over by the pace.' 'Excellent five star read from the first to the last page' 'If you haven't read any of Douglas Kennedy books please do'

Christy Constantakopoulou examines the history of the Aegean islands and changing concepts of insularity, with particular emphasis on the fifth century BC. Islands are a prominent feature of the Aegean landscape, and this inevitably created a variety of different (and sometimes contradictory) perceptions of insularity in classical Greek thought. Geographic analysis of insularity emphasizes the interplay between island isolation and island interaction, but the predominance of islands in the Aegean sea made island isolation almost impossible. Rather, island connectivity was an important feature of the history of the Aegean and was expressed on many levels. Constantakopoulou investigates island interaction in two prominent areas, religion and imperial politics, examining both the religious networks located on islands in the ancient Greek world and the impact of imperial politics on the Aegean islands during the fifth century.

THE STORY: Lewis is a tenured professor of mathematics at a well-regarded university. Underneath his veneer of success, however, lies a soul troubled by questions of personal and cultural identity.

Covering both the history of mathematics and of philosophy, Descartes's Mathematical Thought reconstructs the intellectual career of Descartes most comprehensively and originally in a global perspective including the history of early modern China and Japan. Especially, it shows what the concept of "mathesis universalis" meant before and during the period of Descartes and how it influenced the young Descartes. In fact, it was the most fundamental mathematical discipline during the seventeenth century, and for Descartes a key notion which may have led to his novel mathematics of algebraic analysis.

In 1853, France annexed the Melanesian islands of New Caledonia to establish a convict colony and strategic port of call. Unlike other European settler-dominated countries in the Pacific, the territory's indigenous people remained more numerous than immigrants for over a century. Despite military conquest, land dispossession, and epidemics, its thirty language groups survived on tribal reserves and nurtured customary traditions and identities. In addition, colonial segregation into the racial category of canaques helped them to find new unity. When neighboring anglophone colonies began to decolonize in the 1960s, France retained tight control of New Caledonia for its nickel reserves, reversing earlier policies that had granted greater autonomy for the islands. Anticolonial protest movements culminated in the 1980s Kanak revolt, after which two negotiated peace accords resulted in autonomy in a progressive form and officially recognized Kanak identity for the first time. But the near-parity of settlers and Kanak continues to make nation-building a challenging task, despite a 1998 agreement among Kanak and settlers to seek a "common destiny." This study examines the rise in New Caledonia of rival identity formations that became increasingly polarized in the 1970s and examines in particular the emergence of activist discourses in favor of Kanak cultural nationalism and land reform, multiracial progressive sovereignty, or a combination of both aspirations. Most studies of modern New Caledonia focus on the violent 1980s uprising, which left deep scars on local memories and identities. Yet the genesis of that rebellion began with a handful of university students who painted graffiti on public buildings in 1969, and such activists discussed many of the same issues that face the country's leadership today. After examining the historical, cultural, and intellectual background of that movement, this work draws on new research in public and private archives and interviews with participants to trace the rise of a nationalist movement that ultimately restored self-government and legalized indigenous aspirations for sovereignty in a local citizenship with its own symbols. Kanak now govern two out of three provinces and have an important voice in the Congress of New Caledonia, but they are a slight demographic minority. Their quest for nationhood must achieve consensus with the immigrant communities, much as the founders of the independence movement in the 1970s recommended.

Incorporating 25 years of sales forecasting management research with more than 400 companies, Sales Forecasting Management, Second Edition is the first text to truly integrate the theory and practice of sales forecasting management. This research includes the personal experiences of John T. Mentzer and Mark A. Moon in advising companies how to improve their sales forecasting management practices. Their program of research includes two major surveys of companies' sales forecasting practices, a two-year, in-depth study of sales forecasting management practices of 20 major companies, and an ongoing study of how to apply the findings from the two-year study to conducting sales forecasting audits of additional companies. The book provides comprehensive coverage of the techniques and applications of sales forecasting analysis, combined with a managerial focus to give managers and users of the sales forecasting function a clear understanding of the forecasting needs of all business functions.

History Of The Counties Of Argenteuil, Que. And Prescott, Ont., From The Earliest Settlement To The Present has been considered by academicians and scholars of great significance and value to literature. This forms a part of the knowledge base for future generations. So that the book is never forgotten we have represented this book in a print format as the same form as it was originally first published. Hence any marks or annotations seen are left intentionally to preserve its true nature.

Understanding Economics NCEA Level 3: Micro-Economic Concepts - Internal is a self contained textbook/workbook designed to satisfy the requirements of the recent curriculum changes and allows students to develop the Key Competencies with a range of learning activities. Concise notes and a comprehensive set of practice activities work to introduce and develop the Economic definitions, concepts and skills students require for the Internal Achievement Standard: Demonstrate understanding of micro-economic concepts. Review questions in each chapter allow students an opportunity to test their understanding and prepare for an internal standard. Notes and activities in this book have been trialled with NCEA Level 3 classes in Economics over several years with excellent results

"Only the commandment of love, in all its simplicity - steady, humble, unassuming but firm in conviction and in commitment to others - can save us." - Te Deum homily of Cardinal Jorge Bergoglio, May 25, 2012 As Pope Francis speaks from a new and much larger pulpit, it is easy to forget not only the many challenges he faced as Cardinal Jorge Bergoglio in Buenos Aires, Argentina, but also the many events that shaped the perspective he is now sharing as pope. This collection of homilies, letters, and talks from his years as cardinal in Argentina reveals his consistent love for the poor and joy in Christ as he covers a wide range of topics of interest to all Catholics - marriage, prayer, faith, education, evangelization, the elderly, children, the homeless, vocations, and more. The frank and open style that has endeared him to the world as pope is fully evident in these approachable pieces that give insight into the mind of the man who would become Pope Francis.
