Perhaps the best-kept secret in the publishing industry is that many publishers—both periodical publishers and book publishers—make available writer's guidelines to assist would-be contributors. Written by the staff at each publishing house, these guidelines help writers target their submissions to the exact needs of the individual publisher. The American Directory of Writer's Guidelines is a compilation of the actual writer's guidelines for more than 1,700 publishers. A one-of-a-kind source to browse for article, short story, poetry and book ideas.

Literary Market Place 2005 is the ultimate insider's guide to the U.S. book publishing industry, covering every conceivable aspect of the business. Two easy-to-use volumes provide: 54 sections organizing everyone and everything in the business—from publishers, agents, and ad agencies to associations, distributors, and events. Over 14,000 listings in all—featuring names, addresses, and numbers; key personnel, activities, specialties, and other relevant data; e-mail addresses and Web sites; and more. Some 24,000 decision makers throughout the industry, listed in a separate "Personnel Yellow Pages" section in each volume. Thousands of services and suppliers equipped to meet every publishing need or requirement. LMP 2005 leaves no stone unturned in connecting you with the publishing firm, service, or product you or your patrons need. Completely revised and updated, LMP 2005 helps: publishers locate other publishers, freelancers, agents, printers, wholesalers, and manufacturers. suppliers find names and numbers of potential publishing customers. job seekers locate contact names, addresses, and phone numbers throughout the industry. writers locate publishers for their works. librarians provide patrons with the reference source they need to navigate the publishing industry. When it comes to books, you can reach the people who publish, package, review, represent, edit, translate, typeset, illustrate, design, print, bind, promote, publicize, ship, and distribute, all at one world-famous business address: Literary Market Place 2005.

Explorer's Guide to the Law of Attraction

An Environmental History of the Antarctic Peninsula

Imperial Science Under the Southern Cross

Boys' Life

Cells and Heredity

Frozen Empires is a study of the ways in which imperial powers (American, European, and South American) have used and continue to use the environment and the value of scientific research to support their political claims in the Antarctic Peninsula region. In making a case for imperial continuity, this book offers a new perspective on Antarctic history and on global environmental politics more broadly.

A former NASA engineer and astronautics professor offers down-to-earth advice and recommended reading on preparing for and surviving in science-related professions. This book is especially valuable for those who are attempting career transitions between the work place and academic environments.

Environmental Impact Statement

This book focuses on assigned reading in middle grade science courses and the 14 actions proficient readers take before, during, and after reading to comprehend assigned course texts

including textbook chapters, book chapters, passages, and articles.--Vanessa Dodo Seriki, associate professor of science education, and coordinator of graduate programs in mathematics and science education, Morgan State University

Who are the great scientists throughout the ages, and what exactly did they do to earn their importance? From Archimedes to Newton to Einstein to Hawking, The Scientific 100 provides the fascinating answers. Vivid biographical sketches chronicle the lives and accomplishments of the world's preeminent scientists. And in the tradition of the Citadel Press 100 Series, they are ranked provocatively in order of influence--an inspiration for lively discussion. This unique volume is a browser's treasure trove and a handy reference for the general reader. John Simmons has been associated with Current Biography for more than fifteen years. He has written frequently about Nobel laureates in science. A member of the New York Academy of Sciences, he divides his time between New York City and Paris.

The life and conquests of the Spanish explorer who joined an expedition to the New World in 1502 and subsequently claimed for Spain parts of Mexico, Central America, and South America including Peru.

Explorer's Guide to the Law of Attraction: How to Tap into the Quantum-Heart for Happiness and Success explains how the Law of Attraction works, why it works, and how to make it work for you! The book explains the philosophy behind the Law of Attraction and related principles, its underlying science of quantum physics, takes you on the author's spiritual journey of self-discovery, and gives you a road map for your own personal development. Explorer's Guide to the Law of Attraction will show you how to:

- Manifest your desires quickly and easily
- Recognize what's blocking you from realizing your dreams and eradicate it once and for all

- Recognize and overcome your limiting beliefs and emotional addictions that have you stuck in your current identity
- Regain your lost magical powers and reclaim your birthright as Creator of Your Day and Life
- Break through your existing paradigms and expand your brain's neuronal networks
- Create affirmations and declarations that really work
- Transform your energy and vibrational levels immediately to guarantee the results you seek
- Set up a meditation and contemplation practice to access the Transcendental Self
- Welcome happiness, success and abundance into your life

Explorer of the Universe: A Biography of George Ellery Hale

Library Journal

Archibald Liversidge, FRS

*“George Ellery Hale [1868-1938] is the subject of this impressive biography... Wright charts Hale’s steady progress towards leadership in the nascent field of astrophysics from his childhood experiments at home in Chicago, through student days at MIT, to his first observatory at Kenwood, all of which demonstrate his passion for unravelling the secrets of nature through the then new medium of spectroscopy. This enthusiasm led him into contact with most of his peers both in America and beyond (Lockyer, Huggins, Pickering, Rowland, and many more), many of whom remained close associates and correspondents for years after. Probably this sense of community made Hale so active in the organization of science, including the formation of the AAS [American Astronomical Society], the IAU [International Astronomical Union], and ICSU [International Council of Scientific Unions]. It also gave him the contacts to give the Astrophysical Journal such a good start in 1895. Perhaps the greatest debt we owe Hale is for his relentless drive towards the creation of ever bigger and better facilities, starting with the still unsurpassed Yerkes refractor, continuing with the solar telescopes on Mt. Wilson and then the 60- and 100-inch telescopes on the same peak, and concluding with the 200-inch [at Mt. Palomar]... Scientifically, Hale’s lifelong affair with the Sun brought him success in the detection of magnetic fields and early studies of surface activity by means of the spectroheliograph he developed, and for which he was duly fêted, and the frustrations of trying to record the corona. But these were early successes and as astropolitics and finance took an ever increasing share of his time, he was able to contribute less than he would have liked. Part of the problem was the illness, with both physical and mental symptoms, which progressively plagued the life of this hyperactive polymath; it is sad to note his decline which prevented him playing a fuller part in the creation of what was to become his memorial... this [biography] is something of a classic on one of astronomy’s giants.” — David Strickland, *The Observatory* “This important biography is well written and is highly recommended.” — A. E. Covington, *Journal of the Royal Astronomical Society of Canada* “[An] outstanding biography of this most remarkable man... Helen Wright has done a superb job of tracing Hale’s development not only of new and powerful instruments and of his important discoveries of sunspot magnetic fields and the law of reversing polarities, but also of the embryonic state of American science in the early days of this century... an authoritative biography of one of the most influential men of science this country has produced. The book will bring to contemporary scientists and historians the story of this unique astronomer whose life is of such special interest to the Caltech community.” — Allan Sandage, *Caltech Magazine* (formerly *Engineering and Science*) “Helen Wright gives a detailed account of the life and almost frantic activities of this remarkable scientific leader... In summarizing astrophysical events of the years 1880 to 1950... Wright has provided a useful and fascinating account of scientific development that led to the preeminence of the United States.” — Thornton Page, *Science* “In writing the story of Hale’s origins, career and bequest*

to posterity Helen Wright has richly served her fellow astronomers. No one else could have done so well. Her account preserves an admirable balance in presenting Hale not only as a doer but also as a dreamer... Miss Wright's excellent biography covers the highlights of his career... Miss Wright's book is highly authentic." — Harlow Shapley, *Scientific American*

When Archibald Liversidge first arrived at Sydney University in 1872 as reader in Geology and Assistant in the Laboratory he had about ten students and two rooms in the main building. In 1874 he became professor of geology and mineralogy and by 1879 he had persuaded the senate to open a faculty of science. He became its first dean in 1882.

This edited book provides a global view on evolution education. It describes the state of evolution education in different countries that are representative of geographical regions around the globe such as Eastern Europe, Western Europe, North Africa, South Africa, North America, South America, Middle East, Far East, South East Asia, Australia, and New Zealand. Studies in evolution education literature can be divided into three main categories: (a) understanding the interrelationships among cognitive, affective, epistemological, and religious factors that are related to peoples' views about evolution, (b) designing, implementing, evaluating evolution education curriculum that reflects contemporary evolution understanding, and (c) reducing antievolutionary attitudes. This volume systematically summarizes the evolution education literature across these three categories for each country or geographical region. The individual chapters thus include common elements that facilitate a cross-cultural meta-analysis. Written for a primarily academic audience, this book provides a much-needed common background for future evolution education research across the globe.

Boys' Life is the official youth magazine for the Boy Scouts of America.

Published since 1911, it contains a proven mix of news, nature, sports, history, fiction, science, comics, and Scouting.
